

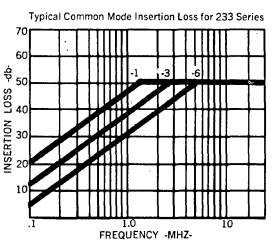
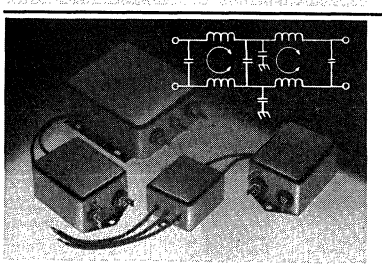
233 Series

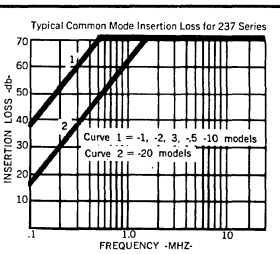
The 233 series filter is a compact filter with an integral IEC connector. This filter gives effective line-to-ground insertion loss and has low leakage current to meet VDE, SEV and other safety organization requirements. If you want an integral filter and connector ask your representative or contact the factory. Many of our other filters can be made available with the IEC connector.

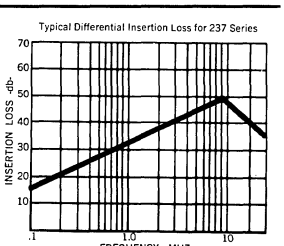


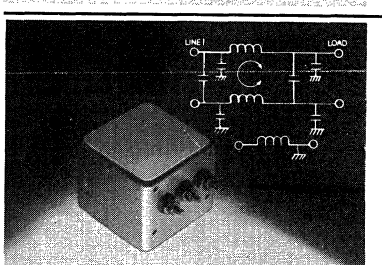


237 Series

This series is a high performance package where filtering requirements are more stringent than those associated with the 220 or 221 series. This package incorporates very high attenuation of both "common mode" and "differential mode" interference yet the cost for such attenuation is moderate.







283 Series

The 283 series is a compact single phase high current filter. This filter is rated for 20 and 30 amps and has god common mode and differential mode insertion loss. This filter has a ground coil for high frequency ground isolation which may be included or omitted as desired.

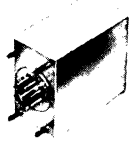
LOW PASS FILTERS

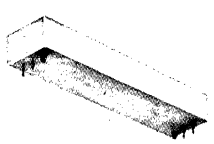
Frequency Range: DC to 50MHz
Impedance Range: 1 ohm to ∞
Stop Bands: 10 to 80db

BAND PASS FILTERS



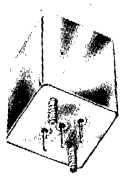
Frequency Range: DC to 50MHz
Band Width: 1% to >100%
Stopband: 10 to 80db
Impedance Range: 1 ohm to ∞

HIGH PASS FILTERS



Frequency Range: DC to 50MHz
Impedance Range: 1 ohm to ∞
Stop Bands: 10 to 80db

BAND REJECT FILTERS



Frequency Range: DC to 50MHz
Band Width: 1% to >100%
Stop Band: 10 to 80db
Impedance Range: 1 to ∞

Custom LC Filters

☐ Filters ☐ Attenuation Equalizers ☐ Group Delay Equalizers ☐ Cable Equalizers ☐ Phase Equalizers ☐ Phase and Attenuation Matched ☐ Delay Lines

Computer-Assisted Design

Shown here are some typical examples of our LC filter design capabilities. Through the use of in-house computers, plus computer time-sharing, we can quickly generate and evaluate such output data as frequency vs. impedance, attenuation, phase, group delay and phase delay in order to provide an immediate quotation.

KR Electronics has computer programs for:

1. Analysis of network behavior to determine attenuation, phase, group delay, transient response and response to a step function and a tone burst.
2. Predistortion of a network and synthesis of a network directly from the poles and zeros.
3. Designing equal ripple group delay networks from your error curve.
4. Determining a network's tolerance sensitivity and reliability.
5. Determining degree of success that can be achieved in production of matched networks.

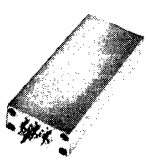
Some of the specialized test equipment used:

1. Computer controlled HP 3042A automatic test set can supply tabular or graphic data with each unit.
2. Programmable synthesizer, phase, gain test sets.
3. Swept low frequency group delay and attenuation test set.
4. Spectrum analyzer.
5. Swept high frequency test set.

DIP Filters

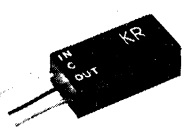
For information on our complete line of DIP filters, send for comprehensive catalog.

MATCHED PHASE & ATTENUATION



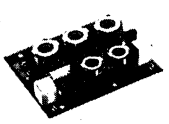
Typical Specifications:
Phase Matched ± 2½° in Pass Band
Attenuation Matched ±.25db In Pass Band for use in Sonar & other multi channel systems.

MAXIMUM FLAT DELAY (BESSEL) FILTER



Size (Typical): .75" x .75" x 1.5"
Frequency Range: 1.5KHz to 1MHz
Z Range: 50 to 10 K
Overshoot: <1%
Delay Flat: <2% to Fc

LINEAR GROUP DELAY VIDEO FILTER



Typical Specifications:
L.P. Cutoff: 4.5 MHz
I.L.: <1db
Passband Ripple: <±.1db
Pass Band Delay Distortion: <25 nsec.
Stopband: >25db

GROUP DELAY & ATTENUATION EQUALIZER NETWORK

To correct system introduced delay distortion & attenuation roll off.

Constant Group Delay Filters

Computer-designed and checked to give equal ripple delay over the pass band insuring exact delay and attenuation characteristics.

Frequency Range: DC to 50 MHz
Impedance Range: 1 ohm to ∞
Temperature Range: —55°C to +125°C.
Complete Encapsulation
Hermetic Seal
P.C. Board Construction
Case Configuration:
Stock or Custom Designed
P.C. Card
Dual In-Line
Standard Hardware Program

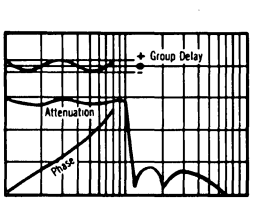
All filters conform to applicable mil specifications.

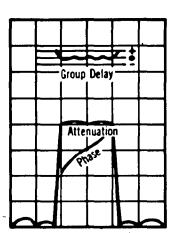
Phase & Attenuation Matching

Differential phase and attenuation matched to eliminate the need for adjustments in multi-channeled systems.

Linear Phase Filters

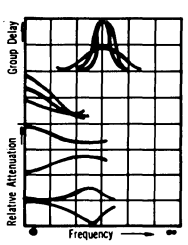
To reduce distortions and lower transient response in modulated systems.





Equalizers

Phase/Delay/Attenuation Computer-designed correction networks derived from system error curves.



Printed in USA

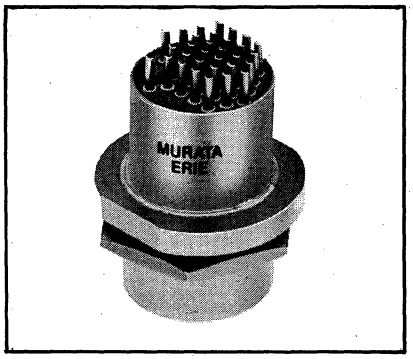
EMI/RFI filter connectors

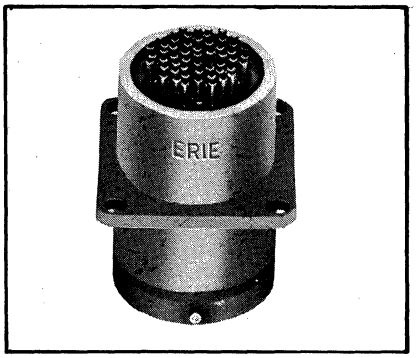
muRata ERIE
MURATA ERIE NORTH AMERICA, INC.

Cylindrical Connectors

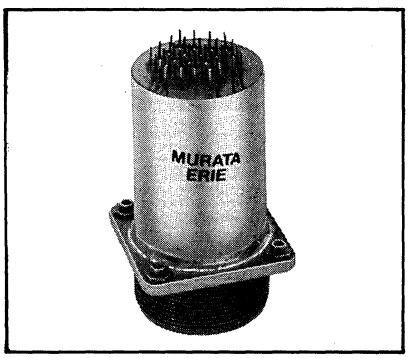
Murata Erie cylindrical filter connectors can be found in numerous military, aerospace and commercial programs and have to be of the highest reliability. Because of the large variations in requirements for specific applications, Murata Erie has a competent staff of applications engineers available to aid in custom designs. Shown are some typical examples of Murata Erie cylindrical filter connectors and the appropriate MIL specifications which they meet.



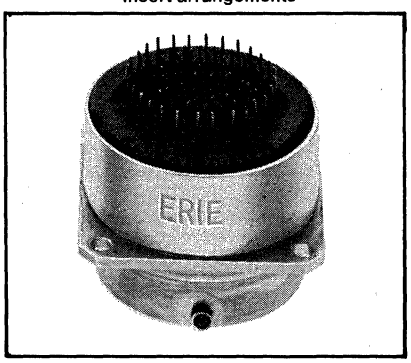
1255-080 Series to MIL-C-83723
Hermetically sealed, 2-61 line insert arrangements



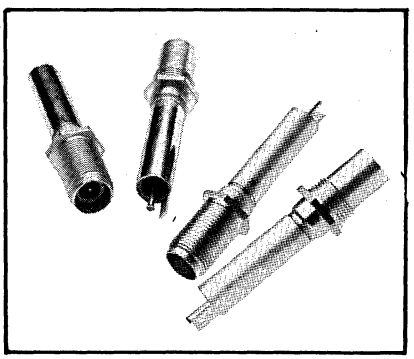
1255-100 Series to MIL-C-26482
Wide capacitance range. Directly replaces ITT "PVJ" and Bendix "FPT"



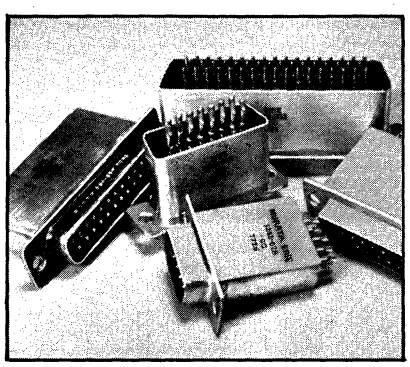
1255-070 Series to MIL-C-5015
Power connector with #12 or #16 contacts



1255-090 Series to MIL-C-38999
Low profile. 3-128 lines with from #12 to #22 contacts



1240-010 Series — UG/U Types
For audio lines. TNC/BNC compatible



"D" Connectors
1255-030 Series to MIL-C-24308

A complete line of high quality subminiature filtered connectors is available in 9, 15, 25, 37, and 50 contact arrangements, per MIL-C-24308. Capable of withstanding MIL-F-15733 testing including vibration and moisture resistance, these rugged assemblies are of a complete solder construction, thereby delivering the highest possible insertion loss at frequencies up to 10 GHz. The rear termination is available in solder-cup, .025″ square wire wrap or .030″ round PC board variations.

CUSTOM DESIGNS

Murata Erie specializes in developing sophisticated circuit designs and creating high component density packaged networks in-house. Our engineering design teams analyze individual customer problems, design specific components or networks to solve the problem, build prototypes and test the complete system. To support the high technological content of these custom networks, the engineering and test capabilities at our facility have become one of the most advanced in the industry today. The reliability of every component and network is assured by a comprehensive battery of tests performed under carefully controlled conditions. Then in-line prototype techniques further validate component performance prior to volume production. These technical support activities permit Murata Erie to respond to customer needs promptly and efficiently with positive performance engineered into the customer's system. If your requirements are unique, if you have a critical space, weight, or environmental problem, Murata Erie can help solve your specific requirements for you with a custom designed filter network.

EMI/RFI filters

MURATA ERIE NORTH AMERICA, INC.

Murata Erie manufactures a complete line of EMI/RFI suppression, low pass filters in Pi, C, L, LT and LB configurations. These units, as well as a complete line of Power Line filters, are offered in both coaxial and bushing mount styles and to MIL-F-15733.

Long term reliability is assured through a quality assurance system meeting or exceeding the requirements of MIL-Q-9859 and DND-1015.

To complement this line of filters, Murata Erie has a complete Customer Service and Customer Engineering staff to provide specific application assistance and custom designs.

Illustrated are typical EMI/RFI filter configurations and their frequency/voltage capabilities.

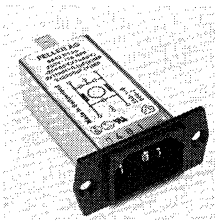
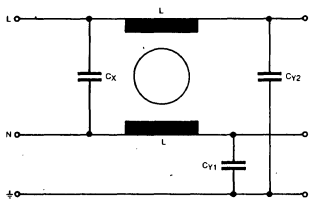
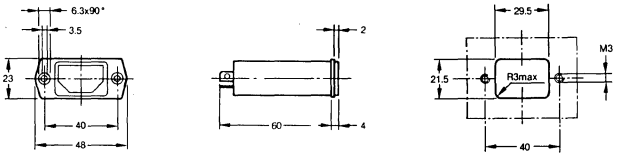
INTERNATIONAL RFI Power Line Filters

RFI filter with integral AC connector







DESCRIPTION:
For Class I applications
Operating voltages up to 250 VAC, 50-60 Hz
Temperature class in accordance with DIN 40040: HPF
Operating temperature range −25° C to +85° C
Ambient temperature for operation at full rated current: 40° C
Test voltage: line-ground & neutral-ground, 2000 VAC, 50 Hz, 1 min.; line-neutral, 1075 VDC, 1 min.
Approvals, recognition, certification: UL, CSA, VDE, SEMKO, SEV
Housing: Rust-protected metal
Connector: CEE 22, molded from black thermoplastic
Contacts: .250 inch solderable quick disconnects
Available with 1 meg ohm, ½ watt discharge resistor on special order

All dimensions in mm.

INTERNATIONAL RFI Power Line Filters

RFI filter for internal mounting

SCHEMATIC: 3710-41 (-1, -3, -6, -10)

DESCRIPTION:

For Class I applications with or without 10 joule, 0.5 watt varistor for surge protection
Operating voltages up to 250 VAC, 50-60 Hz
Temperature class in accordance with DIN 40040: HPF
Operating temperature range −25° C to +85° C
Ambient temperature for operation at full rated current: 40° C
Test voltage: line-ground & neutral-ground, 2000 VAC, 50 Hz, 1 min.; line-neutral, 1075 VDC, 1 min.
Approval: SEV; pending at UL & VDE
Housing: Rust-protected metal
Contacts: .250 inch universal quick disconnects

All dimensions in mm.

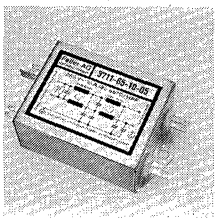
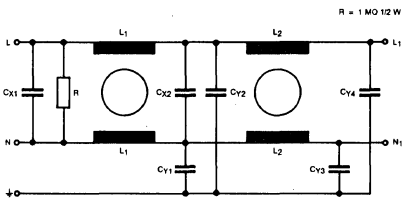
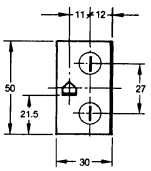
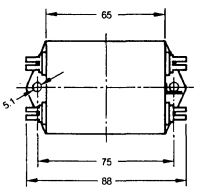
INTERNATIONAL RFI Power Line Filters

RFI filter for internal mounting









DESCRIPTION:
For Class I applications
Operating voltages up to 250 VAC, 50-60 Hz
Temperature class in accordance with DIN 40040: HPF
Operating temperature range – 25° C to + 85° C
Ambient temperature for operation at full rated current: 40° C
Test voltage: line-ground & neutral-ground, 2000 VAC, 50 Hz, 1 min.; line-neutral, 1075 VDC, 1 min.
Approval: SEV; pending at UL, VDE
Housing: Rust-protected metal
Contacts: .250 inch universal quick disconnects
Two-stage filter with increased common mode insertion loss for switching power supply applications

All dimensions in mm.

INTERNATIONAL Power Module

This INTERNATIONAL Power Module combines in one package four basic primary circuit components:

- rocker power switch (push button switch is available as an option)
- fuseholder that accepts either a 5 × 20 mm or ¼ × 1¼ inch fuse
- IEC-320/CEE-22 primary circuit connector
- high performance single-stage RFI power filter

The entire power module is designed from the beginning to satisfy the test requirements of UL, CSA, VDE & SEV. Use of this component can simplify the foreign approval process because it will eliminate the delays and extra costs associated with having unrecognized components tested or in sourcing approved primary circuit components.

The filter itself is designed to provide high attenuation in the range under 500 KHz. This makes it especially effective for use with switching power supplies. Its low leakage allows its use in portable equipment in accordance with VDE and SEV requirements.

Specifications

Part number: 8843.N4.9005.A

Working voltage: 110-250 Volts AC

Frequency: 50-60 Hz

Current (at all voltages in above range) 4 amps

Operating temperature range: – 25 to + 85 °C (VDE class HPF)

Leakage current: less than 0.5 mA at 250 VAC

Power dissipation: less than 8 Watts at 4A

Weight: approximately 490 grams (17 oz.)

Method of connection: wire leads: color-coded brown, blue, green/yellow; 20 cm (approx. 7.9 inches) long; wire size is 1.0 mm² (approximately 16 AWG, which is .963 mm²); wire leads are terminated by two Amp connectors, P/N 350536-0005, and one terminal lug on the ground, Amp P/N 2-31890-1.

Test agency approvals: SEV and VDE approved; UL recognized; CSA certified

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire guage

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction code
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct curent
DIL dual in-line
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

YIG yttrium iron garnet

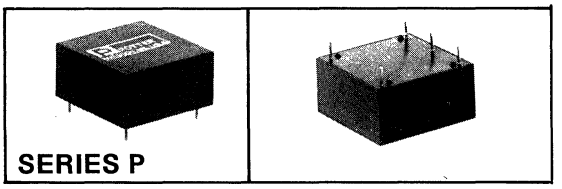
EMI Power Line Filters

SERIES P PRINTED CIRCUIT BOARD FILTERS

The P Series of EMI filters is designed for use specifically on printed circuit boards. They are housed in a 1¼ x 1¼ x .6 high plastic case, equipped with five .030 diameter tinned copper pins located on a 1" grid. Four stand-off feet are provided to maintain the filter away from the printed circuit board during wave soldering operations. They are available in the 600, 605, 610 and 615 circuit diagrams, in current ratings up to and including 6 amperes. The series is UL recognized and under evaluation at VDE and SEV. **Rated Voltage:** 115-250 VAC, 50-60 Hz. **Max. Leakage Current (Line to Ground):** See individual series for their leakage. **Test Voltage:** Line to ground, 2250 VDC; line to line 1500 VDC.



SERIES 610 INTERNATIONAL FILTERS

The 610 Series was designed specifically to meet the requirements of VDE and features the special IEC international power line connector. The compact construction also complies with IEC, BSI standards. All units are U.L. recognized, CSA certified, SEV, VDE approved. **Rated Voltage:** 115/250 VAC, 50-60 Hz. **Max. Leakage Current: (Line to Ground):** 0.5 mA at 250 VAC. **Test Voltage:** Line to ground, 2250 VDC; line to line, 1500 VDC.

SERIES 605 GENERAL PURPOSE FILTERS

The Series 605 is similar to Series 600, except that it has additional line-to-line components to provide superior attenuation in the differential (line-to-line) mode. The entire series is U.L. recognized. Most models are CSA approved: Styles A, B, and C in 2.5 and 10 Amp versions are VDE approved. **Rated Voltage:** 115/250 VAC, 50-60 Hz. **Max. Leakage Current (Line to Ground):** 0.5 mA at 115 VAC, 60 Hz: 1.0 mA at 250 VAC, 50 Hz. **Test Voltage:** Line to ground, 2250 VDC; line to line, 1500 VDC.

SERIES 600 GENERAL PURPOSE FILTERS

Designed to provide low cost, effective interference control in many varied applications. The entire series is U.L. recognized. Most models are CSA approved. Styles A, B, and C in 2, 5, and 10 Amp versions are VDE approved. **Rated Voltage:** 115/250 VAC, 50-60 Hz. **Max. Leakage Current (Line to Ground):** 0.5 mA at 115 VAC, 60 Hz: 1.0 mA at 250 VAC, 50 Hz. **Test Voltage:** Line to ground, 2250 VDC; line to line, 1500 VDC.

EMI Power Line Filters

SERIES 7100 POWER LINE MODULES

A wide variety of power line voltages is in use around the world. The Power Line Module has been designed to overcome this problem. It provides an AC power receptacle, a fuse holder and ejector, and a line voltage selector. For safety, the power cord must be disconnected before access to the fuse is possible. Then, the transparent cover can be moved to the left, the fuse removed, and the PC selector board removed. The board is then rotated until the desired line voltage is shown on the left, the board and fuse replaced, and the cover closed. The module is then ready for use. All models are U.L. and CSA recognized. Model 7100-0001 is VDE approved. **Rated Current:** 6 Amps. **Operating Voltages:** 100, 115/120, 220, 230/240. **Operating Frequencies:** 48-440 Hz. **Max. Leakage Current at 240 VAC:** Model 7100-0001, 1 microampere: Model 7100-0002, 500 microamperes: Model 7100-0003, 2 microamperes. **Test Voltage:** 2250 VDC.

Potter Number	Fig.	Description

SERIES 622 SWITCHING POWER SUPPLY FILTERS

The Series 622 filters are high performance units developed to reduce conducted noise emissions to a level compatible with the requirements of VDE 0875 and proposed FCC standards. High insertion loss is provided for both common mode and differential mode noise from 0.1 MHz through 20 MHz. Recognized by U.L., VDE, SEV, and CSA. **Rated Voltage:** 115/250 VAC, 50-60 Hz. **Max. Leakage Current:** 0.35 MA at 115 VAC, 60 Hz; 0.5 MA at 250 VAC, 50 Hz. **Test Voltage:** Line to ground, 2500 VAC; line to line, 1500 VDC.

SERIES 620 HIGH PERFORMANCE FILTERS

The Series 620 offers superior performance in line-to-line filtering characteristics. It is recommended for low impedance loads and will handle both pulsed or intermittent interference and continuous noise. **Rated Voltage:** 115/250 VAC, 50-400 Hz. **Max. Leakage Current (Line to Ground):** 0.65 mA at 115 VAC, 60 Hz: 1.25 mA at 250 VAC, 50 Hz. **Test Voltage:** Line to ground, 2250 VDC; line to line, 1500 VDC, U.L. recognized.

SERIES 618 PLUG-IN FILTERS

A unique and invaluable aid to system installers and end users who find equipment incompatibility at the site. Plug the equipment into the 618 and the 618 into the wall outlet to filter offending noise from such equipment as small motors, light dimmers, switching power supplies, and electromechanical relays. Recognized by **U.L. Rated Voltage:** 125 VAC, 60 Hz. **Max. Leakage Current:** 1.25 mA at 125 VAC. **Test Voltage:** Line to ground, 1500 VDC; line to line, 1500 VDC.

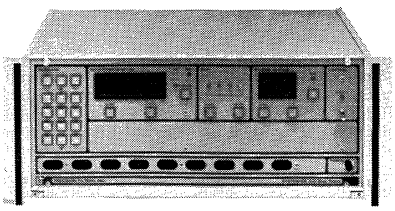
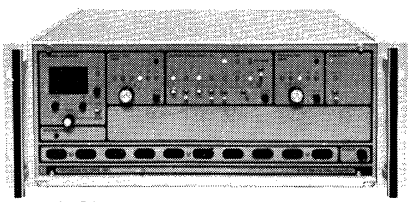
Precision 616 provides 1½ digit resolution with 124 programmable cut-off frequencies. Frequency range .01 Hz to 150 kHz. Gain 1, 2, 5 and 10. Linear phase response available. 16 programmable filter channels.

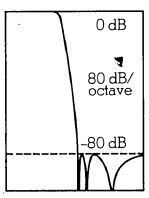


Precision 636 offers 3-digit resolution as standard with 4092 cut-off frequency selections. Optional 3½ digit instrument provides 6141 cut-off frequencies. Convenient keyboard entry and LED displays. 16 programmable filter channels.



16 Channel Filter-Amplifier Precision 416 lets you save 35% by buying one instrument instead of a separate filter and amplifier. 62 programmable cut-off frequencies. DC differential input stage with 100 dB CMRR. Programmable pre-filter and post-filter gain of 1-1000. Overload detectors built in.

BEGONE CURSED ALIAS



You want analog data to come clean before digital conversion.

We keep extending your choice of Precision ways to do it. All programmable. All can interface with mini, micro or GPIB.

16 Channel Anti-Alias Filters All come with time delay filters superior to Bessel. All have elliptics with 80 dB/octave attenuation. Typical phase match is ½°, always within 2°.

Dual Channel Anti-Alias Filter Precision 602 offers all the performance characteristics of the Precision 616 in a two channel instrument. 124 programmable cut-off frequencies. Frequency range .01 Hz to 150 kHz.

16 Channel Amplifier Precision 216 provides programmable gain and programmable calibration over a 300 kHz bandwidth. Plug-in low pass filter. Programmable 6 dB/octave rolloff. Differential input 100 dB CMRR. Less than 1° phase change with gain. Four models: DC and AC, with and without gain ranging.

16 Channel Signal Conditioning Precision 316 provides programmable, computer-controlled conditioning for a variety of transducer inputs. 1% bandwidth DC, 80 kHz. Calibration and conditioning for charge, voltage and strain inputs. Isolated excitation supply.

SAW Bandpass Filters

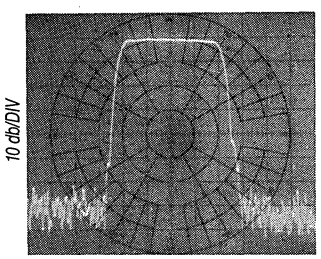
Surface Acoustic Wave Technology provides performance advantages and design flexibility that has proven to be invaluable to engineers in need of reliable, reproducible components featuring linear phase, temperature stability, small size, low shape factor and excellent rejection. Increasingly, SAW technology is meeting the exacting requirements of modern systems with high performance bandpass filters and other state-of-the-art signal processing components such as pulse compressors, delay lines, and resonator products. In addition to this broad product line, Sawtek provides the total engineering support needed to make the proper design trade-offs among key parameters in order to achieve the optimum performance available from SAW technology.

Sawtek produces hundreds of standard SAW products for both low and high volume programs in Cable Television, Satellite Communications, Modems, Radar, EW, and many other signal processing applications. In addition, Sawtek's custom design capability can provide technical assistance and rapid response to new design and production requirements at frequencies from 10 MHz to more than 1 GHz. Sawtek also designs and produces custom subsystems which incorporate SAW components. These include filter banks comprised of cascaded filters packaged in a single assembly, amplifier-filter modules with adjustable gain, and SAW resonator-controlled oscillators. Some of the common SAW bandpass filter products produced by Sawtek and their characteristics are summarized below.

WIDE BANDWIDTH

TVRO and other receiver applications often require wide bandwidth filters designed to provide superior rejection and group delay performance. SAW bidirectional bandpass filters are available with fractional bandwidths as large as 60% at frequencies approaching 1000 MHz. The high coupling materials used to achieve these bandwidths exhibit temperature coefficients of 72 to 94 PPM/°C. Insertion loss from 25 dB to 30 dB is typical of this class of filters in order to optimize group delay and time spurious performance. Shape factors (45 dB:1 dB) normally vary from 1.4:1 to 1.8:1.

Among a family of 70 MHz IF filters that is available off-the-shelf with bandwidths of 10 MHz to more than 36 MHz is the representative filter shown in the photograph below. This device provides a 24 MHz 3-dB bandwidth, 1.35:1 shape factor, and ±10 nsec maximum group delay variation. The packaged filter dimensions are either 0.87" x 0.5" x 0.2" or 0.6" diameter. Similar products are available at many other 1st or 2nd IF frequencies.

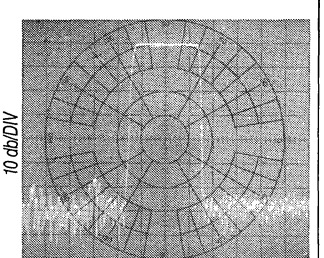


70 MHz
6 MHz/DIV

LOW SHAPE FACTOR

CATV modulator requirements and many similar applications require very low shape factor (45 dB:1 dB) to eliminate adjacent channel interference while preserving linear phase. Sawtek manufactures numerous VSB filters for both U.S. and European CATV requirements. This class of filters exhibits shape factors between 1.15:1 and 1.3:1 with an insertion loss of 20 dB to 30 dB depending on the bandwidth and center frequency. Such low shape factors are offered for fractional bandwidths from approximately 10% to 20%. These performance features are achieved in a 1.5" x 1.0" x 0.2" dual in-line package and clearly demonstrate the size advantages of SAW technology.

A representative filter shown below delivers 5.5 MHz bandwidth at 43.75 MHz center frequency and a shape factor of 1.2:1 with ±1° phase linearity and greater than 60 dB rejection. Other products offered in this bandwidth range include Nyquist filters for CATV demodulators as well as various inexpensive components for modem, translator, and convertor applications with slightly higher shape factor requirements.

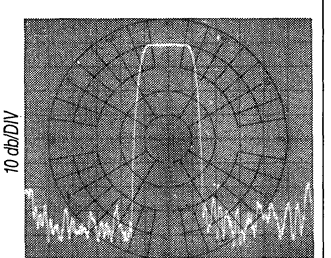


43.75 MHz
2 MHz/DIV

TEMPERATURE STABILITY

Quartz materials are frequently used in narrower band applications where increased stability is necessary. Filters with bandwidths from a few tenths percent to more than 5% are designed for quartz and exhibit total frequency shifts that are smaller than 50 PPM for a 0°C to 60°C commercial temperature range and nominally 200 PPM for most −55°C to +85°C military requirements. Shape factors from 1.5:1 to 3.6:1 are typical for these designs without sacrificing the high rejection expected of SAW devices. Insertion loss is normally 20-25 dB in order to maintain time spurious suppression of 45-50 dB. Bandwidths as large as 30% are implemented using quartz where higher insertion loss is tolerable and quartz performance is necessary. Both bandwidth and shape factor influence filter size, with larger sizes required for narrow bandwidths and low shape factors.

The performance shown below is a 60 MHz center frequency device with a 1.0 MHz bandwidth, 60 dB near-in rejection, and phase linearity of ±2°. The shape factor (55 dB:1 dB) is less than 1.8:1. Sawtek has many existing quartz filter designs at other IF frequencies.

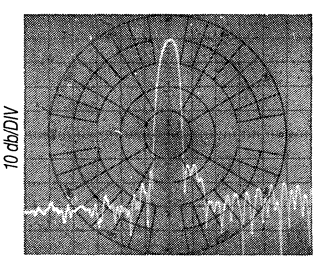


60 MHz
0.5 MHz/DIV

LOW LOSS

Sawtek offers low-loss SAW filters with insertion loss from 4 dB to 10 dB. The achievable insertion loss depends on many interrelated factors including the substrate material chosen, fractional bandwidth, the Q of matching components, the center frequency, and other design and fabrication parameters. This class of filters can also achieve triple transit suppression of 45 to 55 dB without the added insertion loss required for bidirectional filters. Rejection is typically 40 dB to 50 dB with shape factors greater than 1.6:1. These capabilities enable low-loss SAW filters to be used for front-end filters and in other applications where noise figure or dynamic range are limited by filter insertion loss.

The filter example below achieves 5 dB insertion loss on quartz at 261 MHz with a 0.5 MHz bandwidth. Passband ripple is less than 0.04 dB and triple transit suppression exceeds 50 dB. Some standard products are available and Sawtek offers rapid custom design for those applications that require this technique.



261 MHz
1 MHz/DIV

Sawtek maintains a leadership role in SAW technology through the development and production of superior SAW components and a proven track record of delivering these reliable, high performance products on time and at a very competitive price in production quantities. Product reliability for Sawtek's broad range of military and commercial parts is insured by a watchful quality control program that meets even the exacting requirements of military and space applications.

SAW Resonator Products

Surface Acoustic Wave Technology provides performance advantages and design flexibility that has proven to be invaluable to engineers in need of reliable, reproducible components featuring linear phase, temperature stability, small size, low shape factor and excellent rejection. Increasingly, SAW technology is meeting the exacting requirements of modern systems with high performance resonators, resonator filters, oscillators, and other state-of-the-art signal processing components such as pulse compressors, delay lines, and bandpass filter products. In addition to this broad product line, Sawtek provides the total engineering support needed to make the proper design trade-offs among key parameters in order to achieve the optimum performance available from SAW technology.

Sawtek produces hundreds of standard SAW products for both low and high volume programs in Cable Television, Satellite Communications, Modems, Radar, EW, and many other signal processing applications. In addition, Sawtek's custom design capability can provide technical assistance and rapid response to new design and production requirements at frequencies from 10 MHz to more than 1 GHz. Sawtek also designs and produces custom subsystems which incorporate SAW components. These include filter banks comprised of cascaded filters packaged in a single assembly, amplifier-filter modules with adjustable gain, and SAW resonator-controlled oscillators. Some of the common SAW resonator products produced by Sawtek and their characteristics are summarized below.

SAW RESONATORS

Sawtek offers SAW resonators at fundamental frequencies from 100 MHz to more than 1000 MHz. These are high Q components which are primarily intended to be used in oscillators and are also used for both bandpass and notch filters. Sawtek resonators are inherently spur free in oscillator applications, exhibit low motional resistance, and have a pulling range comparable to a 3rd overtone bulk wave crystal. Typical values of R_S range from 15 Ω to 150 Ω and capacitance ratios are nominally 2000:1. Incorporation of special metalization improves oscillator noise performance by permitting drive levels up to +20 dBm. These quartz devices can achieve temperature stability of less than 50 PPM from 0°C to 60°C. Both one-port and two-port configurations are available.

Sawtek maintains a large inventory of pre-tooled SAW resonator crystals including many frequencies for CATV convertor applications. New designs can also be tooled rapidly to meet custom requirements. The 668 MHz resonator shown below is representative of Sawtek's low-cost standard products.

SAW OSCILLATORS

SAW resonator-controlled oscillators are currently produced by Sawtek for military and aerospace systems. Because they are able to operate at fundamentals of over 1000 MHz, SAW oscillators simplify design, reduce cost, and improve noise performance through the elimination of multiplier stages. In many applications it is also possible to achieve adequate power in one stage to directly drive a mixer and thereby eliminate the need for a buffer/amplifier stage.

Typical of the company's oscillator products is a fixed frequency, oven stabilized SAW resonator oscillator at 740 MHz. All spurious and harmonics are down 60 dB; the short-term stability is $\pm 2.5 \times 10^{-10}$ for 1.0 to 25 second averaging times and the phase noise is 120 dBc/Hz for a 2.5 kHz offset. The frequency versus temperature stability of this miniature ovenized unit is ±2 PPM from −15° to +60°C. A maximum power consumption of only 1.75 watts at −15°C ambient is achieved. Sawtek also offers assistance in oscillator design for low-cost consumer and commercial applications and is prepared to help evaluate the suitability of SAW oscillators for each new application.

SAW RESONATOR FILTERS

SAW resonator filters provide high rejection and low loss for narrowband applications requiring 0.01% to 0.25% fractional bandwidths. This family of Sawtek's resonator filters is characterized by a "new shape" in narrowband filter technology. The unique shape demonstrated in the performance photographs below arises from the combination of transversal filter and resonator characteristics: the narrowband response produced by the resonant cavity emerges from the broader passband of the input and output transducers.

Two pole versions typically exhibit from 2 dB to 5 dB insertion loss with 15 dB to 20 dB near-in rejection and 55 dB to 75 dB ultimate rejection. The two-pole 537 MHz resonator filter shown on the left below has a matched insertion loss of only 4.5 dB, 18 dB close-in rejection, and 60 dB ultimate rejection.

Rejection which is beyond the measurable range of most test instruments can be achieved by cascading these two-pole units into multipole configurations. Depending on the number of poles, this technique provides from 20 dB to 60 dB of near-in rejection, improved shape factor and reduced flyback. Insertion loss generally increases at a rate of less than 1 dB per pole for these filters. The six pole 149.3 MHz filter on the bottom right has an insertion loss of only 5.7 dB and an ultimate rejection of over 100 dB.

Sawtek's resonator filters are provided in individual two-pole stages in TO-8 and TO-5 packages and in custom modules when several of these 2 pole units are cascaded. Sawtek offers standard resonator filters and also rapid custom design.

SERIES SCI 9900/9910/9920

All units are hermetically sealed (glass to metal) on one end, while the other end is epoxy sealed. These units are also available reversed with the hermetic seal at the opposite end. To order, add "R" to the end of the part number; e.g. SCI 9900-502R.

Installation: Series 9900 units are designed to be soldered in place. Maximum soldering temperature is +200°C (392°F).

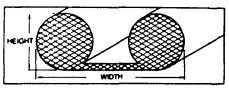
.125 (3.18)	.250 (6.35)	.125 (3.18)	.125 (3.18)	57-1516-12038-02

Spectrum's Shield-Seal provides protection against weather conditions as well as EMI/RFI leakage. The strip is supplied with pressure sensitive adhesive for ease of mounting.

EMI KNITTED WIRE MESH GASKETING
ALL MESH DOUBLE ROUND WITH FIN STRIP



ROUND HEIGHT	CONNECTING WIDTH	MONEL	FERROUS (Copper & Tin Plated)

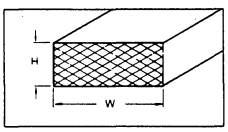
Spectrum's Double-Round Mesh is for use on flat surfaces where EMI/RFI shielding is the only requirement. Surfaces should be free of oil, grease or paint.

ALL MESH — RECTANGULAR STRIP



HEIGHT H	WIDTH W	MONEL	FERROUS (Copper & Tin Plated)
.062 (1.57)	.250 (6.35)	57-1510-06025-31-000	57-1510-06025-34-000

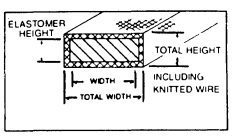
The rectangular strip is recommended for groove mounting. The spring-like nature of knitted mesh assures consistent contact and long life.

EMI SHIELDING STRIP ELASTOMER CORE RECTANGULAR SHAPED GASKET



MONEL WIRE

ELASTOMER HEIGHT	TOTAL HEIGHT	ELASTOMER WIDTH	TOTAL WIDTH	SILICONE SPONGE
.125 (3.18)	.160 (4.06)	.250 (6.35)	.285 (7.24)	57-1510-12025-04-000

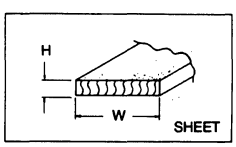
Spectrums' Multicon offers the best possible shield against environment and EMI/RFI contamination. The hundreds of wire ends provide electrical contact while the silicone forms a moisture barrier.

MULTICON SHEET EMI SHIELDING GASKETS



HEIGHT H	WIDTH W	SILICONE AND MONEL	
		SOLID	SPONGE

Multicon sheet material can be used as a single gasket or cut to size by the design engineer for prototype efforts.

EMI-RFI SHIELDING CONNECTOR GASKET

Spectrum's Connector Gaskets are offered for use with standard connector sizes in either the multicon material or the radthin. These gaskets insure the EMI/RFI integrity of the enclosure on which they are used.

Selection Guide for TRW Filters

Almost 40 years of specialization in selective networks, from image parameter design to modern network synthesis are reflected in the superior performance, miniaturization, stability, and reliability of the electric wave filters produced by TRW/UTC today.

Because of the tremendous variation in requirements of frequency, band width, impedance, shape factor, size configuration, and other special characteristics such as envelope delay distortion, and return loss, TRW Inductive Products' catalog items are only a portion of the filters made. Special "custom" designs to customers' specifications range from DC to 30 MHz, from a volume of less than 0.1 cubic inches to more than 250 cubic inches. They cover applications such as telephone, telegraph, telemetering, multiplexing, carrier elimination and restoration, etc.

FOR SPECIAL DESIGNS the following information must be known: source and load impedances, insertion loss, pass band, stop band, operating level, operating temperature range, and size restrictions, plus any other special requirements such as phase matching, insertion loss matching, or attenuation matching, between units, envelope delay distortion, return loss limits, etc.

Since filters usually contain many precisely adjusted elements and are used in critical applications where continued reliable performance is a necessity, all TRW/UTC filters, both stock and specials, are manufactured and guaranteed to MIL-F-18327.

Units with identical electrical and mechanical characteristics as stock items, except for center frequency on band pass filters, or cutoff frequency on low and high pass filters, are known as stock specials. For example, a band pass filter identical to the BPM series with a center frequency of 2700 Hz would be identified as BPM-2700, a 2700 Hz center frequency band pass filter identical to the MNF series would be identified as MNF-2.7, a low pass similar to LPM series with a 2700 Hz cutoff frequency would be identified as LPM-2700.

FOR WIDE BAND PASS applications (more than an octave wide) low pass and high pass filters may be connected in tandem. For instance, the FLH-5000 in tandem with the FHH-200 will result in an attenuation characteristic flat within 1 dB from 300 to 4200 Hz, approximately 3 dB at 200 and 5000 Hz, 40 dB below 140 Hz, and 43 dB above 6400 Hz.

FOR BAND REJECT applications, the BPM band pass minifilters may be used by connecting as shown on page 47, Fig. A. Generally, on stock filters, variations of ±20% in the source and load impedances will have negligible effect on the attenuation response. FHH, FLH, FLL, BPM, and BMI filters may be used with a much lower source impedance and still give satisfactory results.

The nominal test level, E_9 is 2.0 Volts RMS for all stock filters except 0.5 Volt on the BPM and 1.0 Volt on the LPM.

BAND PASS

Type No.	Center Frequency Range	Band Width	Source (Ohms)	Load (Ohms)	MIL Grade
MNF	400 Hz to 5.4 kHz	±7.5%	10K	10K	7
MNF	7.35 kHz to 70 kHz	±7.5%	10K	10K	7
MNF	93 kHz to 165 kHz	±7.5%	10K	10K	7
MWF	22 kHz to 70 kHz	±15%	10K	10K	7
MWF	93 kHz to 165 kHz	±15%	10K	10K	7
BPM	400 Hz to 20 kHz	±3%	10K	10K or Grid	6
BMI	30 Hz to 50 Hz	±3%	10K	Grid	6
BMI	60 to 400 Hz	±3%	10K	Grid	6
TGT	425 Hz to 3315 Hz	±42.5 Hz	600	600	6
TGR	425 Hz to 3315 Hz	±42.5 Hz	600	600	6

BAND REJECT

Type No.	Frequency Range	Source & Load (Ohms)	MIL Grade
BPM	400 Hz to 20 kHz	10K	6

LOW PASS

Type No.	Cutoff Frequency Range	Source & Load (Ohms)	MIL Grade
LPM	200 Hz to 5 kHz	10K	6
LPM	6 kHz to 15 kHz	10K	6
FLH	600 Hz to 5 kHz	10K	6
FLL	3.5 kHz to 50 kHz	600	6
LMI	50 Hz to 150 Hz	10K	6
LML	500 Hz to 12 kHz	600	6

HIGH PASS

Type No.	Cutoff Frequency Range	Source & Load (Ohms)	MIL Grade
FHH	200 Hz to 10 kHz	10K	6
HMI	50 Hz to 400 Hz	10K	6

TTE™ *miniature* FILTERS

THESE PAGES CATALOG OVER 1,000,000 STANDARD FILTER TYPES — SPECIFY ANY COMBINATION OF FREQUENCY, SOURCE AND LOAD OHMS WITHIN THE MIN-MAX RANGES.

MANY TYPES AVAILABLE FROM STOCK — REQUEST STOCK LIST

BANDPASS—MINIATURE— ANY FREQUENCY FROM 30Hz TO 20MHz

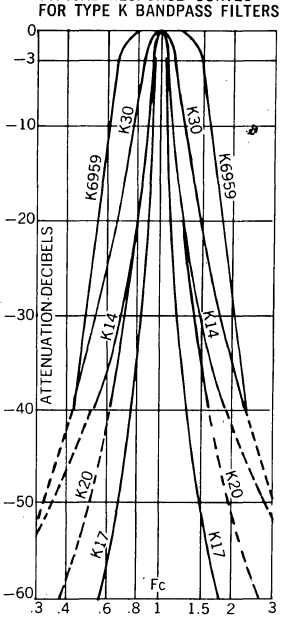
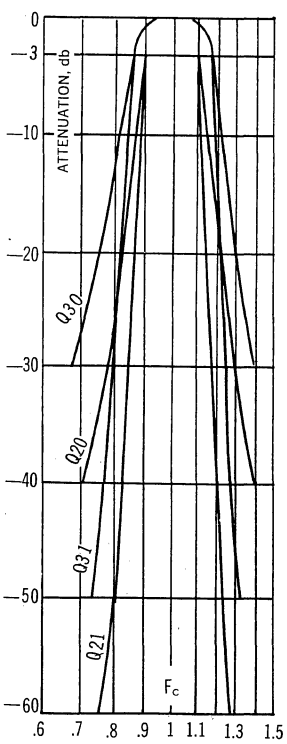
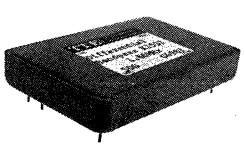
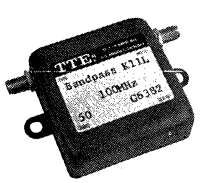
TYPICAL RESPONSE CURVES FOR TYPE K BANDPASS FILTERS



TYPICAL RESPONSE CURVES FOR TYPE Q BANDPASS FILTERS







WIDE BAND FILTERS: TTE has designed and manufactured Filters since 1956. During that time Bandpass Filters with 3dB Bandwidths as great as 3100% have been supplied. A Bandwidth of ±20% or greater can be obtained by ordering TTE standard Highpass and Lowpass filter sections as a composite network. Select numbers from the Series H and J listings on page 3 which give the desired attenuation slopes and combine these numbers. For example to obtain a slope of 40db at 0.65 of the lower frequency cut-off, Fc1, (Highpass section) and 40db at 1.6 of the upper frequency cut-off, Fc2, (Lowpass section) use Highpass model H69 plus Lowpass model J59. The resulting Bandpass number is K6959.**THE HIGHPASS SERIES NUMBER IS FIRST, FOLLOWED BY THE LOWPASS NUMBER.** Types with dissymmetrical attenuation slopes can be combined. Also specify the 3db down cut-off frequencies Fc1 and Fc2, the impedance and PCB case or chassis mount case.

INSERTION LOSSES for bandpass types between equal terminations are from 0.5 to 6db depending upon bandwidth, frequency and size. K10 and K11 types have about 10db insertion loss and K12 types about 6db flat loss. **SPECIALS** are available for center frequencies from 10Hz upward and 60db to 3db bandwidth ratios as sharp as 2.0:1. **TO ORDER** Specials, also specify (5) bandwidth and (6) stop band attenuation required.

TO ORDER BANDPASS FILTERS — Specify (1) TTE Series No., (2) minus 3db frequencies, (3) source impedance, (4) load impedance. **PRICES:** $63 to $200 each.

CASE DIMENSIONS AND MOUNTING INFORMATION ARE ON PAGE 1•1535.

OTHER BANDPASS FILTERS: Any of the above Bandpass Filters may be specified for the following:

TELEMETERING: Any IRIG Channel.

HIGHPOWER: Any level up to 100 watts; frequencies from 10MHz.

DIFFERENTIAL INPUT/OUTPUTS: Any frequency from 300Hz; any series number.

PHASE MATCHED SETS: Any frequency up to 2MHz; any series number.

PLEASE CONTACT US WITH YOUR SPECIFICATION.

TO ORDER: Specify the channel, power level or other modification needed.

REMEMBER TO REQUEST THE STOCK LIST.

TO ORDER BANDPASS FILTERS — Specify (1) TTE series number, (2) the center frequency, (3) source impedance and (4) load impedance. **TO ORDER SPECIAL**

BANDWIDTHS also specify (5) the minus 3db frequencies and (6) the stopband frequencies.

ACTIVE FILTERS

BANDPASS

CENTER FREQ. RANGE: 1Hz to 100KHz
IMPEDANCE RANGE: 0 to 1 Megohm
OPERATING VOLTAGE RANGE: ±5VDC to ±12VDC
GAIN: Unity ±.3dB (other gains may be specified)
DESIGNS: Chebyshev, Butterworth, Elliptic-function and Bessel (3 to 10 poles available for most designs)
CASE: Hermetically sealed steel
Prices are from $35.00 each. The output is non-inverting; However, inverting output may be specified.

BAND REJECTION

NOTCH FREQ. RANGE: 1Hz to 100KHz
IMPEDANCE RANGE: 0 to 1 Megohm
OPERATING VOLTAGE RANGE: ±5VDC to ±12VDC
GAIN: Unity ±.3dB (other gains may be specified)
DESIGNS: Twin-T and wide-band notch filters
CASE: Hermetically sealed steel
Prices are from $35.00 each. The output is non-inverting, inverting output may be specified.

GENERAL FILTER NOTES: TTE Filters are epoxy encased within hermetically sealed steel cases. The case finish is copper plate per MIL-C-14550 under fused tin per MIL-T-10727A. The maximum power output without K12 types are tested at 100mv and B83 types at .77v output for all impedance levels. Terminations are understood to be resistive unless otherwise specified. Mount clear of transformers or other strong magnetic fields. BNC and SMA connectors are available.

SOURCE AND LOAD impedances are equal and resistive for standard HP and LP filters. The insertion loss is less than 0.5db for ±10% matching. Typical passband flatness within ±0.2db. Phase linearity is reasonable. Some types are used for pulse transmission. **SPECIALS** for other impedances and unequal terminations are available. Units with cut-off ratios as sharp as 1.06 (0.94 Highpass) are available.

from **Vernitron** (the ceramic filters people)

Vernitron CERAMIC LADDER FILTERS — 9, 11 and 17-disc

DESCRIPTION

Miniature ceramic i-f filters are available at reasonable prices for use in Military and commercial equipment. These rugged, light weight, fixed-tuned devices offer excellent selectivity and stability in less than 0.1 cu. in. Standard stop band rejection to 80 dB and center frequency tolerance varies between ± 2 and ± 3 kHz. Tighter tolerances available on special order. These filters are designed for communications circuit applications where precise center frequency tolerance and high stop band rejection are required.

Standard models in 6 dB bandwidths from 2 kHz to 85 kHz are available at 455* kHz center frequency. Input and output impedence is between 1000 and 2000 ohms.

*Also available in 500 kHz center frequency.

APPLICATIONS

These Ladder Filters are ideal for transistorized i-f amplifier circuitry as well as IC's in AM and FM sets. Their small size, ruggedness and high stopband rejection make them particularly suitable for airborne and hand-held transceivers.

FEATURES

- Stopband Rejections to 80 dB
- Small Size
- Lightweight
- Shape Factor ≤ 2:1
- Hermetically Sealed
- Vibration and Shock Resistant
- Excellent Stability
- Fixed-Tuned

100-700 kHz

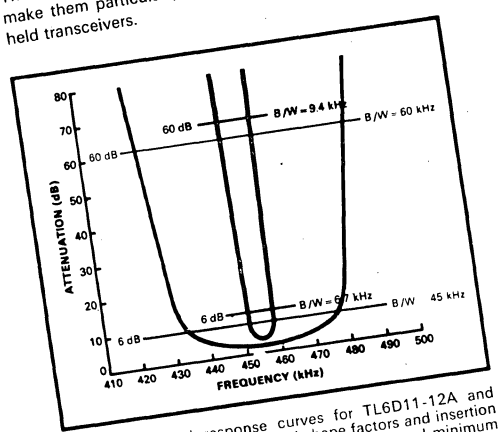

Figure 1. Typical response curves for TL6D11-12A and TL40D11-72A. Note that typical shape factors and insertion losses are considerably better than maximum and minimum values shown in table below.

LET US BE YOUR MANUFACTURING FACILITY

Do You Need Help To Get The End Product You Want?

After you have your design to meet your circuit performance requirements, ACC's Engineering Staff can assist you to package your circuit. We have a complete staff of electrical, mechanical, industrial, and chemical engineers to develop the most cost-effective assembly to compliment your product.

Custom Thick Film Hybrid?

If space is a problem, thick film hybrids are the answer to reduced manufacturing cost and component inventories. ACC can design and deliver a custom thick film hybrid to meet your performance, space, and cost requirements. For less stringent space requirements, formed discrete components or SOT packages are quite adequate. If space is tight or you have your own custom chip, a chip and wire hybrid may be the best approach.

The results to you are smaller size, improved reliability, and in most cases, better circuit performance due to the fact that thick film allows you to choose the exact resistor values and tolerances you want.

We have the capability to build your product to any stage of completion you desire. From a thick film print, fire, and trim, only, to a finished encased product, or any stage in between, by using custom thick film hybrids or printed circuit assemblies.

We will work with you during your development stage. We possess the capability to deliver into the millions, if necessary.

Automotive Controls Corporation (ACC) has over 200,000 square feet of production space. This facility, located in Southeast Kansas is staffed with a quality-conscious, dependable, rural and small-town work force. Our employees, to whom we owe our success, will build your product.

Printed Circuit Assembly?

If space is not a problem, then an automatically inserted printed circuit assembly is the most cost effective approach. ACC's printed circuit assembly area is equipped to insert components and wave solder boards up to 16 inches wide. Water washing is standard. Chlorinated cleaning solvents are available. The ACC facility is equipped and the personnel are trained to handle electrostatic sensitive components at all stages of production.

Packaging Support

In support of the electronic assembly, ACC can offer single-sided printed circuit boards, coil winding, transfer and injection molding, potting metal and lead frame stampings, metal plating, and painting, if required.

Total Design Capability through manufacture, test and delivery

Hybrid Integrated Circuits for Military and Industrial Applications

Aeroflex designs, develops and manufactures custom hybrids for both military and industrial customers. We are qualified for use on B1, B52, F15, F16 and LAMPS MK III, plus numerous other ground and airborne systems and medical and communications equipment.

Will a custom hybrid do your job? Hybrid technology combines the quick-response design and manufacturing economies of the printed circuit assembly with the reliability and small size of the monolithic IC. To help you determine when the method will be cost effective, Aeroflex's experienced engineers will consider the circuit itself, manufacturing lead time, and the quantities involved.

Once the decision has been made, Aeroflex has the technical and manufacturing support to meet your most exacting requirements. Our circuit designers will put your parameters together into the smallest, lightest package consistent with effective performance.

We excel in designing active filters, sample and hold networks, low noise pre-amps, voltage regulators, drivers and receivers and digital interface circuits to meet MIL-STD-1553. Electrical performance is guaranteed by our automatic test systems.

In our complete manufacturing facility, Aeroflex has the skilled personnel and production equipment to meet every hybrid design and manufacturing requirement. For most designs, we use thick film deposition for its great flexibility. On occasion, however, we will utilize thin film chip components in conjunction with thick film resistors and conductors. Gold conductors and various silver alloys are often employed, as well as a variety of resistor inks to cover the full range of resistor values. We have and use both laser, for active trimming, and airbrasive trimming systems.

Packaging for all environments. Aeroflex commercial hybrids are often epoxy sealed in ceramic for industrial applications. Heavy duty packaging options include welded hermetically sealed all-metal cases including flat packs, dips, plug-ins and "TO" cans for military requirements.

Product Assurance, in and out. Our Product Assurance Department meets the requirements of MIL-Q-9858A. Quality Assurance, Quality Control, Qualification Testing and Equipment Calibration are its responsibilities. Incoming inspection is performed on semiconductors in accordance with MIL-STD-883, Method 2010.1 Level B. Similar criteria are applied to hybrid inspection. Screening and qualification testing to MIL-STD-883B, Method 5008 and MIL-M-38510 are also available.

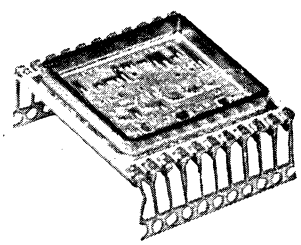
CUSTOM HYBRIDS



THICK FILM SCREENING & FIRING OF CONDUCTOR & RESISTOR MATERIALS
Down to 5 mil lines and 5 mil spaces, Ag and Au based conductors, 10 ohms/square to 1 Meg/square resistor inks, down to 50PPM/°C TCR
RESISTOR TRIMMING TO .5% TOLERANCES
Abrasive or laser; active or passive; negligible post-trim drift

DIE BONDING OF ICS, TRANSISTORS DIODES, CHIP CAPACITORS & INDUCTORS
Typical component density: 60 components/sq. inch of substrate

GOLD WIRE BONDING:
1 MIL WIRE DIAMETER TYP.

FUNCTIONAL AND QUALIFICATION TESTING, COMMERCIAL SPECIFICATIONS

HERMETIC OR EPOXY SEALING OR DIP COATING
Packaging Options:
- Sealed metal case
  - Glass-to-metal flat pac
  - Dual-in-line plug-in, 14 and 16 pin
- Coated substrate SIP or DIP
- Chip Carrier

CONTRACT LASER TRIMMING

- E.S.I. Automatic System
- Step-and-Repeat Handling
- Prototype to High Volume Trimming
- Precision Trimming; Accuracy as high as .1%

WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

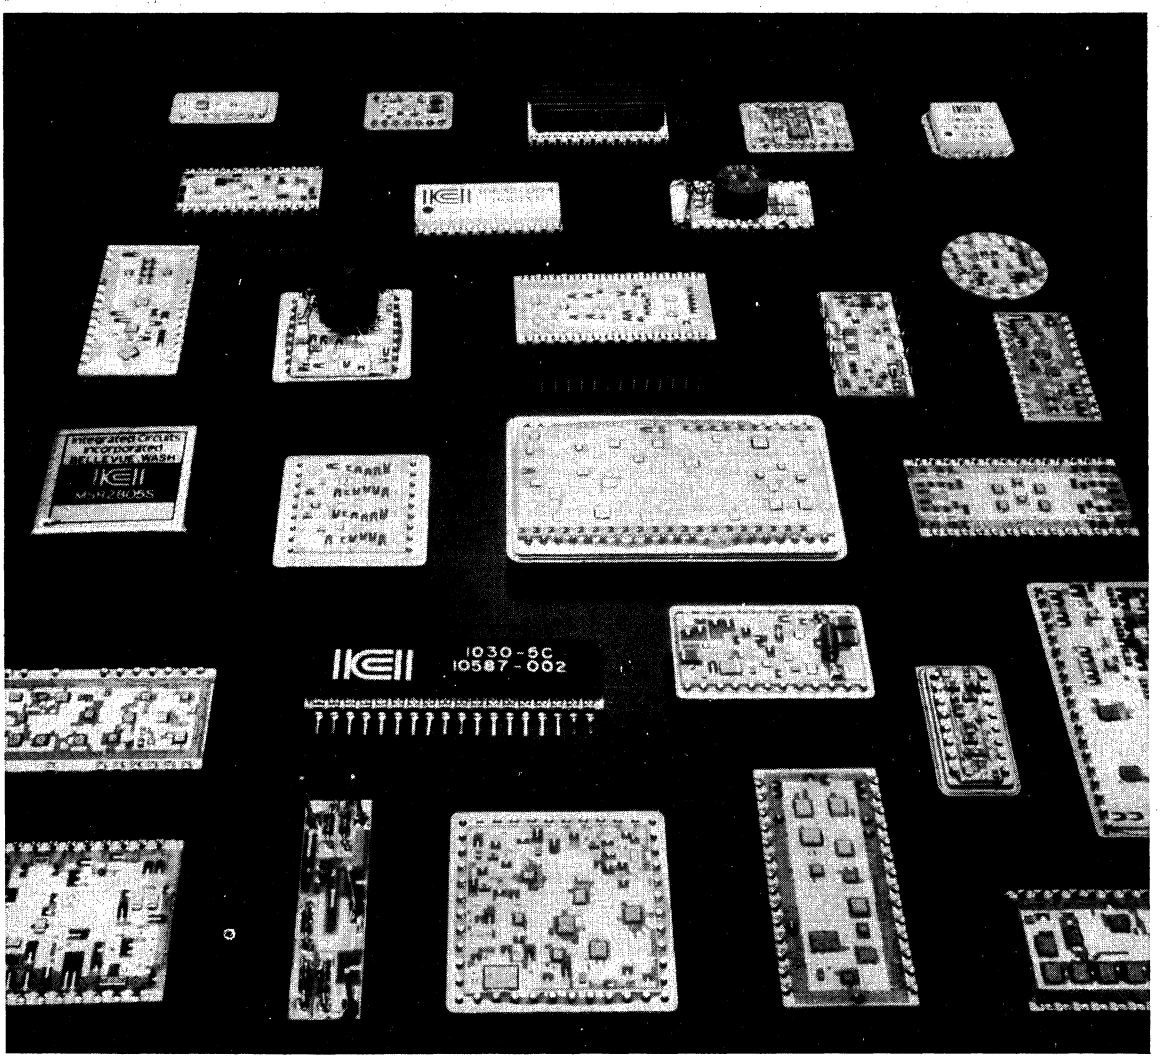
Integrated Circuits Incorporated

CUSTOM HYBRID CIRCUITS



Producing high quality custom hybrid circuits is an art no one learns overnight. And producing circuitry consistently recognized as the finest in the industry takes years.

That's the secret behind the success of Integrated Circuits Incorporated. Building custom thick-film hybrid circuits has been our specialty since 1969. And we've used all of that experience to perfect our expertise in not only technical capabilities and quality, but also in program management and customer coordination.

We can design a circuit to your specification, or convert your circuit to a miniature hybrid design. Either way, it must pass the rigid quality assurance requirements basic at ICI - MIL-I-45208, MIL-STD-883, MIL-M-38510, and MIL-Q-9858 as applicable.

For military, airborne or industrial requirements, you'll find ICI to be responsive, capable and reliable.

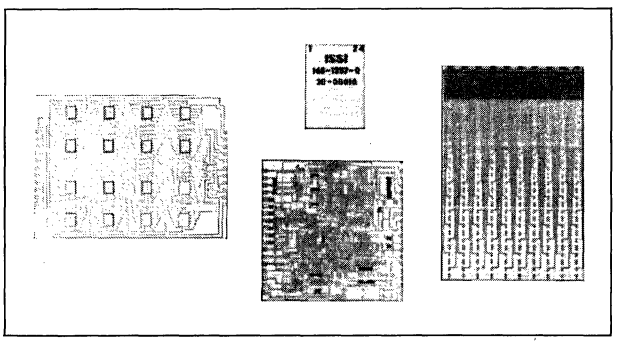
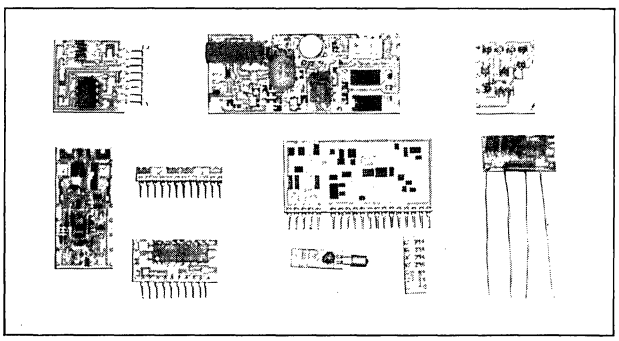
HYBRID THICK FILM TECHNOLOGY

FEATURES

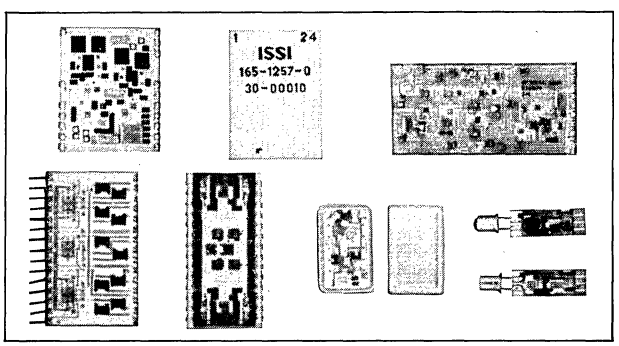
- one time insertion costs
- functional modularity
- high quality components
- compact
- low profile
- low mass
- high performance
- small
- extreme temperature operating range
- military specification capabilities



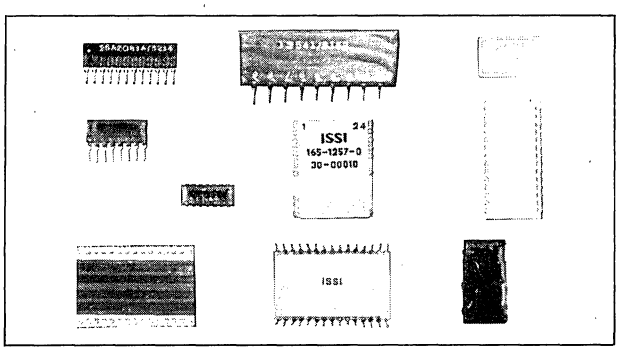
METALIZED SUBSTRATES — Simple or complex, single or multi-layer conductor patterns with Pd. Ag (Palladium Silver), Pt. Ag. (Platinum Silver), Au, (Gold), Pt. Au. (Platinum Gold) inks. Insulation with high temperature glass dielectric or low temperature glaze. Film Resistors from 1 ohm to 150 megohm, tolerances to ±0.1%, T.C.R. to 50 ppm, 1/10 w to 10 watt power dissipation, laser or abrasive trimming.



SOLDER REFLOW TECHNOLOGY — Compact networks with thick film resistors, IC packages, chip capacitors, inductors, discrete components, SOT package, diode bridge assembly, high and low temperature solder, standard or custom pinouts. Special devices with photo-transistors, LED's and functional sub-assemblies.



CHIP AND WIRE TECHNOLOGY — Microcircuit assembly of functional thin film integrated circuit or component chips into operational devices. All available IC & component chips assembled to a thick film circuit by solder or epoxy bonding. Chips wired into circuit with either gold or aluminum wire. (Thermocompression or thermosonic wire bonding). Special handling for static control. Components actively or passively trimmed to guarantee functional specifications.



CUSTOM PACKAGES — Single-in-line or Dual-in-line pinout packages, conformally coated, metal can, plastic or ceramic covered and sealed. Customer markings as well as manufacturer's identification for traceability. Leak tested, temperature cycling and burn-in before final test to insure reliability. Heat sink attached to either alumina or beryllium oxide to obtain maximum power dissipation.

TECHNICAL SERVICES

• Circuit design • layout (including conversion of existing circuitry to thick film technology) • material selection • rubylith production • screen fabrication • product tooling • product testing • and building to print. Testing includes functional electrical and mechanical parameters • burn-in • leak testing • and temperature cycling.

APPLICATIONS

• Memory • logic • linear circuits • A-D • D-A • timing • filters • isolation • pulse shaping • impedance matching • signal generation • switching • sequencing • and many other medium range energy dissipation functions or a combination thereof.

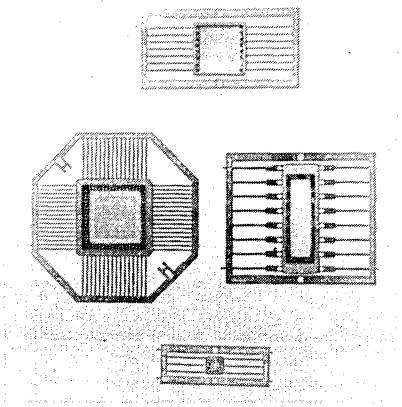
GLASS FLATPACKS



- Most economical means of hermetically enclosing small hybrids
- Easily and economically customized to your needs
- Meet MIL-M-38510 requirements
- Sealed by reflow soldering with combination lids

SELECTION GUIDE

Case Size: Flatpack — case sizes ⅛″ x ⅛″ to 1″ x 1″; Dual-In-Line — case size ¼″ x ¾″

Glass Free Area: Flatpack — .040″ x .070″ to .810″ x .810″

Number of Leads: 1 to 84, depending on case size

Lead Centers: .050″, .040″, .030″, or as specified

Configuration: Leads and pads on 2 sides; Leads on 2 sides; Pads on 4 sides; Leads and pads on 4 sides

Base Material: Metal, ceramic, or beryllia

Plating: Gold or Nickel, all over or selective

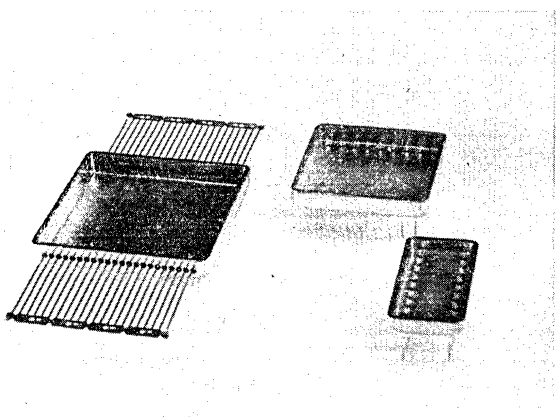
AVAILABILITY

Popular Packages — 2 weeks

Custom Packages — 8 weeks

WRITE FOR OUR DETAILED CATALOG

METAL PLUG-INS AND FLATPACKS



- Strongest and most reliable means of enclosing all size hybrids
- Package variations available built to your requirements
- Meet MIL-M-38510 Class S and all highest reliability requirements
- Sealed by seam welding with stepped lids or reflow combination lids

SELECTION GUIDE

Case Size: Plug-In and Flatpack case sizes ranging from .380″ x .625″ to 1.970″ x 2.970″

Number Pins/Leads: 1 to 188, depending on case size

Pin/Lead Centers: .100″ Plug-In; .050″ Flatpack

Configuration: Pins/Leads on 1, 2, 3, or 4 sides

Plating: Gold or Nickel, all over or selective

AVAILABILITY

Tooled Packages — 4 weeks

Custom Packages — 10 weeks

MOS LOGIC AND SPECIAL FUNCTIONS

LOGIC FAMILIES

SERIES MC54/74HCxxx — The newest addition to Motorola's standard CMOS logic families, this family of SSI and MSI functions will offer over 100 device types to serve the high performance user. These devices incorporate the LSTTL features of wide fanout and high speed belonging with the present CMOS features of low power consumption and high noise immunity. These devices are pinout configurations identical with many of the popular 54/74 series LSTTL and MC14000 series CMOS devices. Devices are available in both −40 to 85°C and −55 to 125°C temperature ranges.

SERIES MC14000/MC14500 — These standard lines of MSI/SSI circuits contain a complement of nearly 200 device types with which to implement complete system designs. They feature the JEDEC B-Series specifications with low-power-Schottky compatible outputs. A faster nonbuffered line of devices is compatible with the B-Series, as well as with standard Schottky TTL, for mix-and-match versatility.

SPECIAL FUNCTIONS

SERIES MC14400 AND MC145000 SERIES — This series of higher complexity dedicated LSI devices consist of single-chip "subsystems" designed for specific applications. Most circuits utilize the latest wafer processing techniques in silicon-gate technology for higher performance. Included in the family of dedicated LSI functions are 7 groups or sub-families.

GENERAL PURPOSE FREQUENCY SYNTHESIZERS — Phase-locked loop and programmable divider variations are available in either single or dual modulus configurations. This group offers up to 25 MHz typical input frequency and a programmable reference divider. Parallel, serial, or 4-bit data bus input formats are available with the feature of an on-board reference oscillator.

TV/CATV PLL FREQUENCY SYNTHESIZERS — This family of specific purpose frequency synthesizers are designed for TV/CATV uses. They include circuitry for keyboard scan, both up and down. They operate from a 5 volt power supply in both UHF and VHF frequencies. All products have an on-board reference oscillator with full remote control capability. Included in the design is the capability of programming 100 channels in various signalling formats.

CMOS DATA CONVERSION CIRCUITS — A full line of A/D converter products are available in single slope, dual slope or successive approximation formats. Multiplexed channels accomodate up to 15 channels. Full MPU compatible (68xx format). Products are available that can offer a full 8 bits of resolution at 1 MHz with 32 μs conversion times.

OP AMPS AND COMPARATORS — This family is available with operational amplifier and comparator separately or both on the same chip. The devices are all internally compensated and also offer very low input current <1 nA. Bias currents are externally programmable.

CMOS DISPLAY DRIVERS — These devices can drive LED, LCD, or VF display segments. CMOS technology means very low power dissipation but each device can produce very high current drive. A master/slave combination can drive 48 segments (master) and 44 segments (slave). Segments or dot patterns can be driven up to 1 sq. centimeter in size.

REMOTE CONTROL ENCODER/DECODER PAIRS — This group pairs a transmitter and a receiver for full remote control applications. Decoder configurations can be 5 address/4 data, 4 address/5 data or all 9 address. The decoder can interpret up to 19,683 different codes.

CMOS SMOKE DETECTORS — Smoke detectors are popular for both residential or industrial uses. The package is a small 16-pin DIP with very low power consumption. They are ideal for battery applications. A smoke alarm is triggered via external transducer and internal "on-chip" drivers for lights, horns and other detector unit functions.

INTEGRATED CIRCUITS FOR TOMORROW'S TELECOMMUNICATION
(MOS AND BIPOLAR)

TELECOMMUNICATIONS

Motorola offers a comprehensive line of telecommunication products consisting of: Dialer chips; a broad family of Modems and Modem Filters; Crosspoint Switches; and Codecs and Filters. To service the newly emerging office automation market, there are: single-chip Codec/Filters (mono-circuits); Time Slot Assigner circuits; and advance Voice/Data parts.

THE M6800 FAMILY

The MC6800 microprocessor was the first MPU of the M6800 Family and still remains a highly cost-effective processor for a great many process-control and data-communications applications. After years of field experience, the MC6800 has earned an enviable reputation as one of the easiest-to-use processors available.

The table to the right lists devices in the M6800 Family. The following microprocessor and microcomputer families are derivations and enhancements of the MC6800 architecture to provide easy migration within the M6800 Family as processing-power requirements change.

Device	Function	Device	Function
MC6800	MPU	MC6845	CRT Controller
MC6802	MPU (with Clock, RAM)	MC6846	ROM-I/O-Timer
MC6808	MPU (with Clock)	MC6847, Y	Video Display Generator
MCM6810	128 × 8 Static RAM	MC6850	Asynchronous Interface Adapter
MC6821	Peripheral Interface Adapter		
MC6822	Industrial Interface Adapter	MC6852	Synchronous Serial Data Adapter
MC6828[1]	Priority Interrupt Controller		
MC6829	Memory Management Unit	MC6854	Advanced Data Link Controller
MC6835	CRT Controller with ROM		
MCM6836	ROM/EEPROM Combination	MC6859	Data Security Device
MC6839	Floating Point ROM (IEEE Standard Draft 6.0)	MC6860[2]	Digital Modem
		MC6862[2]	Digital Modulation
MC6840	Programmable Timer	MC68488	General-Purpose Interface Adapter
MC6843	Floppy-Disk Controller		
MC6844	Direct Memory Access Controller

THE M68000 FAMILY — AN INVESTMENT IN THE FUTURE

16-Bit Microprocessor Family

Led by the MC68000 Microprocessing Unit (MPU) and followed by a host of peripherals, the M68000 Family offers the engineer a set of building blocks to construct cost-effective solutions to an ever-widening range of complex 16/32 bit applications. The tremendous popularity of the M68000 Family is not without warrant. HMOS technology, performance, and support are but a few of the many reasons why the M68000 Family continues to be the 16 bit industry leader.

It should be noted that the M68000 Family is a not-so-distant relative of the MC6800. All M6800 Family peripherals interface directly with the MC68000, so upward compatibility is built in. Where low cost and medium performance are required, they present a very attractive alternative. The plan for the M68000 Family is a simple one. Provide the marketplace with the best 16-bit family and back it up with support that is second to none. And it's happening now.

What about expandability? The M68000 Family is designed with this in mind. All the way from an internally microcoded 32-bit architecture to the third-generation EXORmacs development system. Efficient high level language support provided by Pascal allows upward compatibility of software from 8-bit to 16-bit to 32-bit machines.

The majority of today's 16-bit microprocessor applications are quite complex, with long design times. Clearly, the required investment in design resources requires finished products to have increased longevity. Motorola understands this, and is committed to offering a family which will allow these products to remain state-of-the-art for years to come. Thus, the M68000 Family is an investment in the future.

EXORmacs is a trademark of Motorola Inc.

MEMORIES Selector Guide RAMs

Motorola has developed a very broad range of reliable MOS and bipolar memories for virtually any digital data processing system application. And for those whose requirements go beyond individual components, Motorola also supplies Memory Systems and Micromodules.

New Motorola memories are being introduced continually. **This selector guide lists all those available as of April 1983.** For later releases, additional technical information or pricing, contact your nearest authorized Motorola distributor or Motorola sales office.

Data sheets may be obtained from your in-plant VSMF Data Center, distributors, Motorola sales office or by writing to:

DIGITAL LOGIC FAMILIES

SCHOTTKY TTL • ECL • TTL
MDTL • MHTL • MCA • PLL

A "Supermarket" For Standard Logic

Motorola carries a comprehensive inventory of standard components encompassing almost all major digital logic families and technologies.

MECL (very high-speed) Logic Circuit

Motorola manufactures three lines of Emitter-Coupled-Logic (ECL). The new high-speed MECL10KH, the industry standard MECL10K and MECL III.

MECL10KH Series

Much of the MECL10KH Family of high-speed logic circuits will be pin-compatible with the existing MECL10K Family, but double the performance standards. System clock rates are increased as much as 40%, parasitic capacitance drops by 50%, and propagation delay is reduced by 50% with no corresponding increase in power dissipation. Pin compatibility permits upgrading of existing designs without major modifications. More complex logic functions will be available in the 10KH family than were possible in MECL10K. The MECL10KH Family is performance compatible with the MECL Macrocell Array.

MECL 10KH DC Specifications
V_{EE} = −5.2 V + −5.0%

DIGITAL LOGIC FAMILIES

MECL 10,000 Series — A complement of more than 80 circuits, ranging from simple gates to complex functions, such as arithmetic units and memories, populates this family of high-speed logic circuits. Devices are available in two temperature ranges −30 to 85°C and −55 to 125°C to meet the highest standards of performance.

Typical family characteristics for 10K and 10KH circuits

	10K	10KH
Speed (ns)	2.0	1.0
Power (mW)	25	22/25*
Power-speed product (pJ)	50	22/25
Rise/fall times (ns) (20–80%)	2.0	1.5
Temperature range (°C)	−30 to +85	0 to +75
Voltage regulated	No	Yes
Technology	Junction isolated	Oxide isolated

*V_{EE} = 4.5 V/5.2 V

MECL III series — Basic logic circuits designed for high-speed requirements, as in test and communications equipment, and in high-speed sections of larger systems. MECL III circuits are compatible with MECL 10,000/10KH devices.

MECL Family Comparisons

Feature	MECL 10,000		MECL III
	10,100 Series 10,500 Series	10,200 Series 10,600 Series	
1. Gate Propagation Delay	2.0 ns	1.5 ns	1.0 ns
2. Output Edge Speed	3.5 ns	2.5 ns	1.0 ns
3. Flip-Flop Toggle Speed	160 MHz	250 MHz	300–500 MHz
4. Gate Power	25 mW	25 mW	60 mW
5. Speed Power Product	50 pJ	37 pJ	60 pJ

*Average for Equivalent LSI Gate.

TTL Circuits

Motorola manufactures several different families of TTL circits:

The SN54LS/74LS, SN54ALS/74ALS, MC54F/MC74F Schottky Series

The MC4000/4300 Series

The newest families to be announced, 54/74ALS Advanced Low power Schottky and 54/74F FAST TTL, offer superior speed/power performance over their 54/74LS and 54/74S counterparts. Several design enhancements have also been incorporated in these new families to improve performance and minimize potential applications difficulties. Both families are fully specified over temperature as well as a 10% power supply voltage range. These families offer a wide selection of SSI, MSI, and LSI components to simplify system design.

Motorola's 54/74LS Low power Schottky TTL line offers a selection of over 180 devices and is 100% compatible with ALS and FAST TTL.

An impressive line of standard TTL complex functions in the MC4000/4300 series, provides significant reduction in package count over systems implemented with simpler families. Phase Locked Loop functions are also available in this series.

Macrocell Array

The Macrocell Array Concept combines a pre-diffused array of components with computer-aided design techniques to offer system designers a rapid, cost-effective means for implementing semi-custom, high-speed digital logic systems with VLSI circuitry.

Compared with equivalent systems developed with discrete logic (separately packed SSI/MSI logic functions) the high packing density of the Macrocell array chip offers up to 50-to-1 reduction in system component count, with a power dissipation improvement (reduction) of as much as 10 to 1.

	MCA 600 ECL	MCA 1200 ECL	MCA 2500 ECL	MCA 500 ALS	MCA 1300 ALS	MCA 2800 ALS
Technology	ECL			ALS		
Max. gate equiv.	652	1192	2472	533	1280	2800
Major Macrocells	24	48	110	24	60	130
Input ports	42	60	120 I/O	26	40	120 I/O
Output ports	18	26	68	27	40	
Max. gate delay (ns)	1.2	1.2	0.5	3.0	3.0	1.4
Max. toggle freq. (MHz)	160	160	300	50	50	125
Power diss. (w) max. @ 10 MHz	2.2	4.0	6.0	1.1	1.6	2.5

Other Logic Families

MHTL Seriis MC660 — for use in equipment designed for high-noise environments.

MDTL Series MC830/930 — An early logic family manufactured primarily for replacement purposes.

PLL Series — Motorola offers the designer an array of devices to perform phase-locked loop functions, such as phase detectors, dividers, and oscillators. These devices include both TTL and MECL (MC12000/12500) technologies.

OPERATIONAL AMPLIFIERS

TRIMFET Family of JFET Input Operational Amplifiers

MC34001, MC35001
MC34002, MC35002
MC34004, MC35004

This new family of low-cost TRIMFET operational amplifiers combines two state-of-the-art linear technologies on a single monolithic integrated circuit. Each internally compensated operational amplifier has well matched high voltage JFET input devices with a laser trimmed input offset voltage. The BIFET technology provides wide bandwidths and fast slew rates with low input bias currents, input offset currents, and supply currents. The laser trimming technology provides input offset voltage specification options which range from 2.0 to 10 millivolts maximum.

The Motorola TRIMFET family offers single, dual and quad operational amplifiers which are pin-compatible with the industry standard MC1741, MC1458, and the MC3403/LM324 bipolar devices. The MC35001/35002/35004 series are specified over the military operating temperature range of −55°C to +125°C and the MC34001/34002/34004 series are specified from 0°C to +70°C.

TRIMFET is a trademark of Motorola Inc.

Features

- Laser Trimmed Input Offset Voltage Options of 2.0, 5.0, and 10 mV Maximum
- Low Input Bias Current — 40 pA
- Low Input Offset Current — 10 pA
- Low Input Noise Voltage — 16 nV/$\sqrt{Hz}$
- Wide Gain Bandwidth — 4 MHz
- High Slew Rate — 13 V/μs
- Low Supply Current — 1.8 mA per Amplifier
- High Input Impedance — 10^{12} Ω
- High Common-Mode and Supply Voltage Rejection Ratios — 100 dB
- Industry Standard Pinouts

EEM PRODUCT SELECTION GUIDES

Use the EEM Product Selection Guides. There are 33 Guides in this edition of EEM. See page 2 (1•2, 2•2, 3•2) of each volume to locate the Product Selection Guides that pertain to your needs.

Technology Leadership In Synchro Converters

Natel offers the widest selection of synchro-to-digital and digital-to-synchro converters...as well as synchro instrumentation.

And...Natel means more than technological superiority in standard products. It also stands for the best in Custom Hybrids. Our new, expanded, automated, class 10,000 hybrid facility is at your disposal...fully MIL qualified, and ready for volume production.

Call or write for our product line, 3-ring binder and/or our facilities brochure.

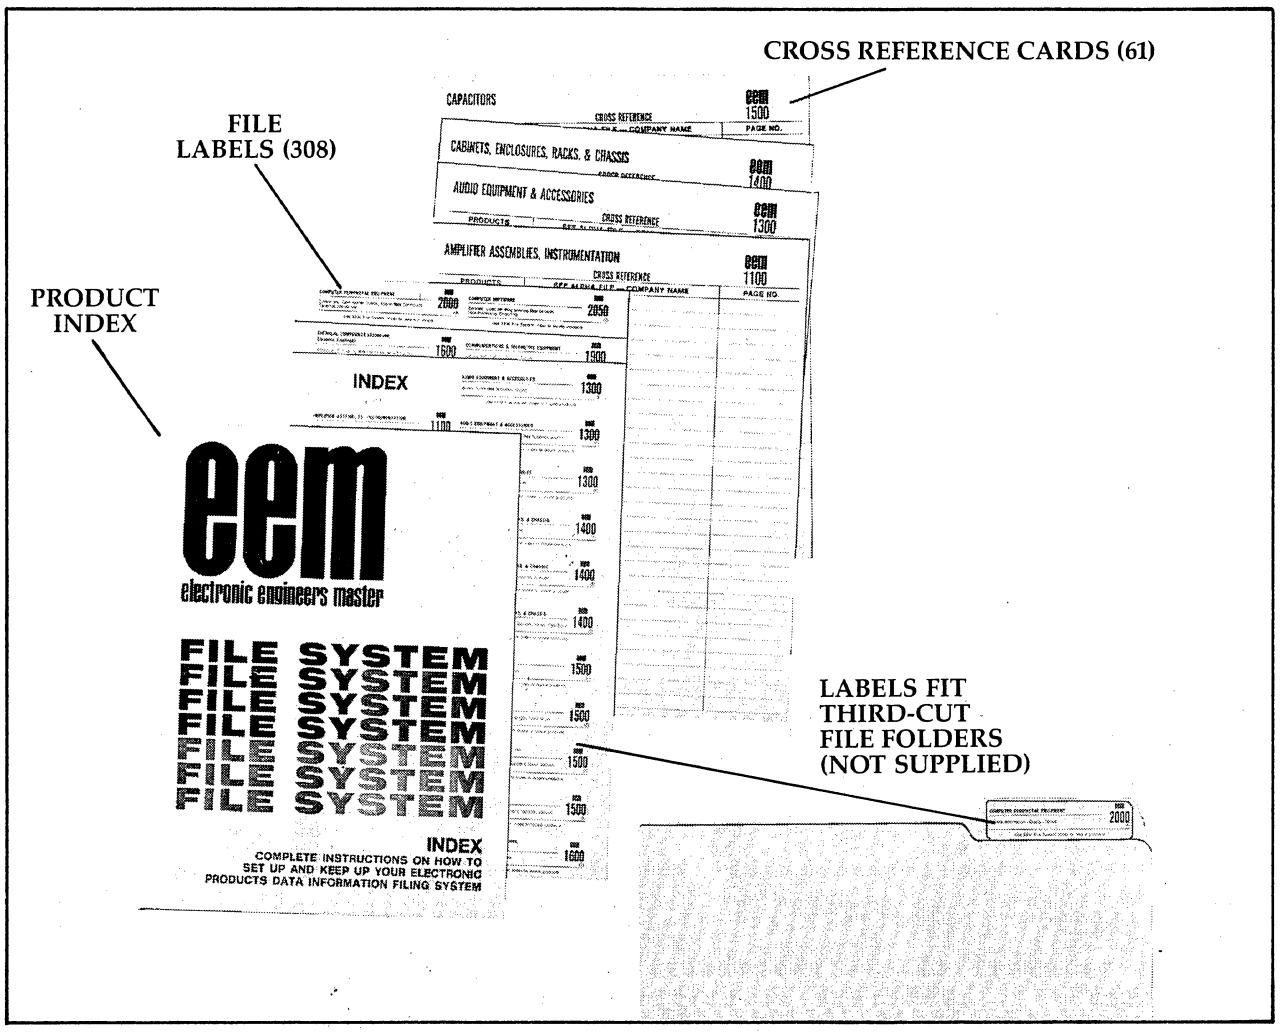
EEM PRODUCT SELECTION GUIDES

Use the EEM Product Selection Guides.
There are 33 Guides in this edition of EEM.
See page 2 (1•2, 2•2, 3•2) of each volume to locate the Product Selection Guides that pertain to your needs.



WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

APPLIED RESEARCH Inc.

DEPT. EM, 160 DUPONT STREET, PLAINVIEW, NEW YORK 11803, (516) 349-9200

Over 30 Years as a Supplier to the Military/Industrial RF Markets.

RF FILTERS, MULTIPLEXERS, CONVERTERS, POWER AMPLIFIERS, MULTIPLIERS, SIGNAL SOURCES, MULTICOUPLERS and COMPLETE RF SYSTEMS.

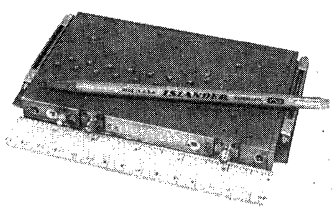
MULTIPLIERS

FREQUENCY GENERATION THROUGH MULTIPLICATION OR PHASE-LOCK TECHNIQUES/VHF to Ku-Band (10 MHz to 1.5 GHz)

Applied Research offers many proven designs using either technique or combinations. And we're capable of meeting your exact requirements, precisely.

Our Phase-lock loops, comprised of I.C. components, together with RF devices, yield outputs of up to 10 watts at microwave frequencies. And our multipliers are available as passive devices or in combination with amplifiers having multiplication factors of from 2 to 2000. In combination with varactor multiplier devices output in Ku-band can be obtained.

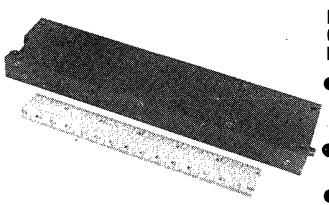
What's more, we can supply crystal oscillators or internal drivers to provide a self-contained source.



Frequency sources with mutiplication up to 29 and multiples thereof are available deriving signals in the L, S, and C-bands.

ELECTRICAL CHARACTERISTICS (TYPICAL)

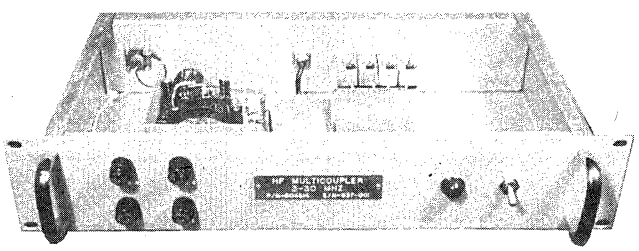
- Input Frequency: 100 MHz ±10 MHz
- Output Frequency:
  Type-1, 6400 MHz (X64)
  Type 2, 5800 MHz (X58)
- RF Power
  Input Power: +5 dBm, ±3 dB
  Output Power: +5 dBm, ±2 dBm over temperature
- Discrete spurious outputs: Harmonics below −60 dBc, others at a maximum of −60 dBc.
- Temperature: −54°C to +85°C



ELECTRICAL CHARACTERISTICS C-BAND PASSIVE BROADBAND HIGH POWER MULTIPLIERS

- Input Power: +40 dBm
  Output Power: +32.6 dBm ±0.5 dB
- Spurious Response: >−70 dBc inband
- Bandwidth: 5.9 to 6.4 GHz

MULTICOUPLERS



Multicoupler Model HFM-2 (TX)-230-8-40 is one of a series of multicouplers designed and manufactured by Applied Research Inc. This model, operating over a frequency range of 2 to 32 MHz, has 8 to 32 independent outputs for inputs of up to +20 dBm.

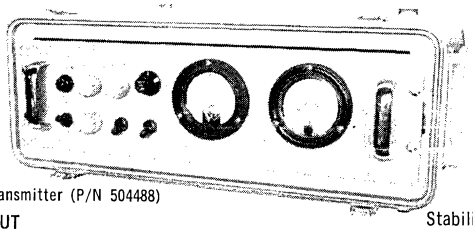
PERFORMANCE SPECIFICATIONS
Frequency Range: 0.5 to 32 MHz
Number of Outputs: Up to 32
Isolation Between Outputs: To be specified by customer — Up to 70 db.
Overall Gain (Input to Output): 0 dB
Connectors: To be specified by customer.

The HFM Series covers the frequency range of 0.5 MHz to the Telemetery Bands, and has been designed for applications where weight and space are critical such as submarine, shipboard, or mobile installations.

MODEL	NO. OF OUTPUTS	FREQUENCY RANGE
HFM-2(TX)0532 8/40	6 to 32	500 KHz-32 MHz
HFM-2(TX)232 8/40	6 to 32	2 MHz-32 MHz
HFM-2(TX)140 12/40	6 to 32	10 MHz-400 MHz
HFM-2(TX)2410 8/40	6 to 32	20 MHz-1100 MHz
HFM-2(TX)1415 6/50	6 to 32	1400 MHz-1600 MHz
HFM-2(TX)2223 8/50	6 to 32	2200 MHz-2300 MHz
HFM-2(TX)1423 8/50	6 to 32	1400 MHz-2300 MHz

SOLID STATE TRANSMITTERS and POWER AMPLIFIERS in P, L, S and C BANDS.

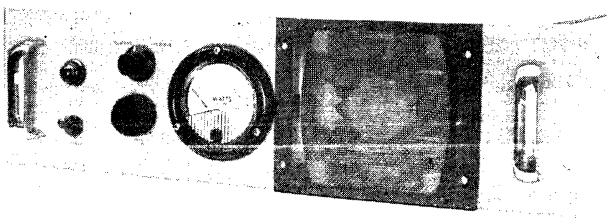
TRANSMITTERS



Transmitter (P/N 504488)

RF OUTPUT
Range: 400-550 MHz
Control: Field Tuneable in 0.5 MHz increments
DC/AC Power: 24-30 volts at 9 amperes/115/230 VAC 5/2 Amps
Stability: ±0.005%
Power: 30 watts, minimum
MODULATION: Frequency Modulation

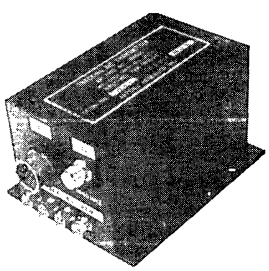
POWER AMPLIFIERS



200 Watt RF Power Amplifier (P/N 504495)

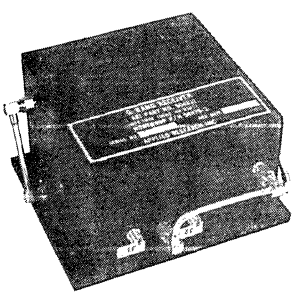
Frequency Range: 400 to 550 MHz

AEROSPACE COMPONENTS



L-BAND TRANSMITTER

Frequency: Tunable, 1650-1670 MHz
Power Output: +28 dBm min.
Modulation: FM; 1-35 KHz
Stability: ±3 MHz
Power Input: +22 to +34 VDC, .75A max.
Weight: 1 kg max.

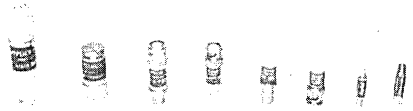


G-BAND RECEIVER

Frequency: 4.4 to 5.0 GHz*
Stability: ±.005%
Sensitivity: −90 dBm for 10 dB S/N and ±250 KHz deviation
IF Bandwidth: 1 MHz nominal
Power Input: +21 to 30 volts, .75A max.
Weight: 3.5 lbs. max.
* Factory set

FIXED PAD ATTENTUATORS & TERMINATIONS (DC-2GHz)

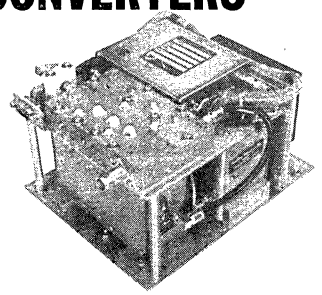
FOR TYPES BNC, TNC, C, N, AND OSM CONNECTORS



Integrated line of fixed pad attenuators, terminations, and impedance-matching transformers provides means for rapid and accurate division of voltages over the frequency range of DC-2 GHz, and for the matching of different impedances with minimum loss over a broad frequency band. The unit cost is within the practical price range of the large and small equipment user, as well as the research and experimental user.

GENERAL CHARACTERICTICS
Frequency Range: DC-2 GHz
VSWR: 1.25:1
Attenuation Accuracy:
−0.1 dB +0.3 dB for values of 1 to 12 dB
−0.2 dB +0.5 dB for values of 15 to 20 dB
Impedances (Nominal): 50, 75 90 ohms
Attenuation Values:
1, 2, 3, 4, 6, 10, 12, 15, 20 dB (standard).
Other values up to 30 dB Special

TELEMETRY CONVERTERS



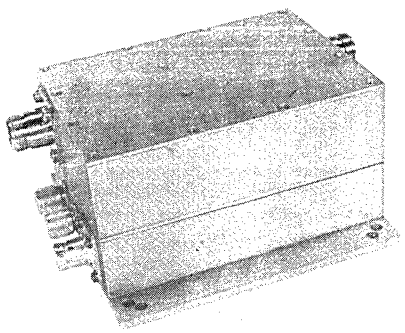
Down converters for military and commercial application are available throughout the frequency range from VHF to K-band. Applied Research manufacturers the filters, oscillator sources, the IF amplifiers, and complete packages that are associated with down converters.

These units permit the ready adapting of existing UHF telemetry receiving equipment for use in the 1435 to 1540 and 2200 to 2300 MHz telemetry band with high conversion gain.

GENERAL CHARACTERISTICS
Long Term Stability: Better than ±.1 PPM over temperature range
Image Rejection: >50 dB
Noise Figure: Better than 5 dB for 100 mc bandwidth (2.2 to 2.3 GHz)

Converters meeting special requirements which include group delay or phase and amplitude characteristics can be designed to meet special needs.

MULTIPLEXERS



State of the Art Multiplexers, applying Applied Research Inc.'s experience in the design and manufacture of NOTCH FILTERS, BANDPASS FILTERS, and BAND REJECT FILTERS allows for the ultimate in performance.

TYPICAL TRIPLEXER CHARACTERISTICS
Frequency Range: 5 kHz to 500 MHz
Frequency Breaks: 500 kHz and 32 MHz
Passband Attenuation: 1.5 dB maximum
Crossover Losses: 4.5 dB maximum
Reject Characteristics: 42 dB minimum, other bands
Ripple: 0.5 dB peak to peak maximum
Impedance: All ports shall be 50 ohms unbalanced
VSWR: 1.5:1 maximum, 2:1 through crossover

APPLIED RESEARCH Inc.

DEPT. EM, 160 DUPONT STREET, PLAINVIEW, NEW YORK 11803, (516) 349-9200

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire guage

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction code
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct curent
DIL dual in-line
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

YIG yttrium iron garnet

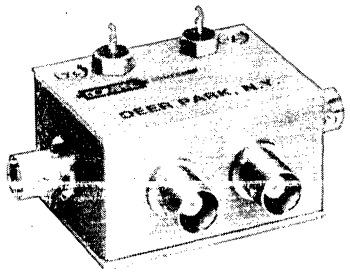
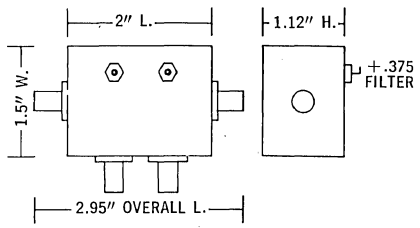
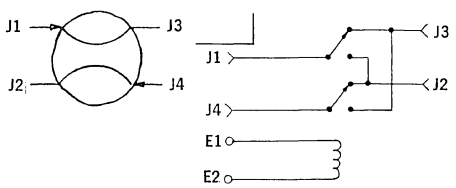
RF TRANSFER SWITCHES

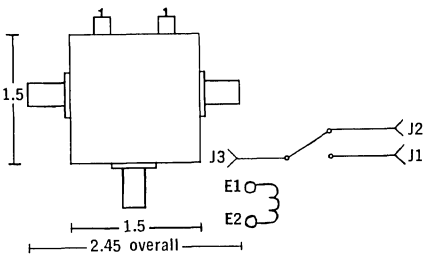


SCHEMATIC DPDT





SCHEMATIC SPDT



WARRANTY
This unit is warranteed fully against manufacturing defects for one year as long as case seals are not broken.

OPTIONS
Internal Protection Diode
Coil voltages
Extended flanges
Other connectors
Special switch circuit configurations on request.

GENERAL
These RF Switches for use in RF Communications equipment are a DPDT, SPDT type or Transfer with BNC standard connectors (other connectors optional). The relay coil is available in a latching or non-latching type with internal protection diodes as an option. Other configurations thru SP16T are currently available.

OPERATION
Hook up the terminals E1 (ground) and E2 to the appropriate voltage to cause the coil to pull in. Be sure to observe polarity if protection diodes are used. The low current of the coil can be driven by transistor or I.C. Logic.

SPECIFICATIONS
Non-Latching (standard), Latching (optional)
DPDT & SPDT
BNC Standard Connectors (others optional)
Frequency: DC-500 MHz
Impedance: 50 ohms
Isolation: Port-to-Port 40 dB typ. min.
Coil Voltage: 24/28V (others optional)
VSWR: 1.2
Insertion Loss: 0.3 dB

HOW TO ORDER:

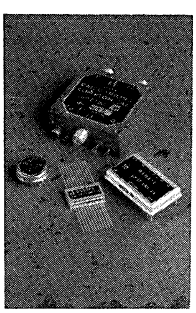
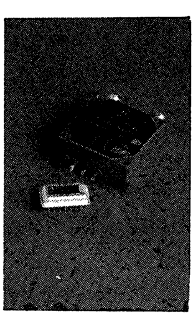
High Reliability RF MICs

DAICO High Reliability RF Microwave Integrated Circuit Components

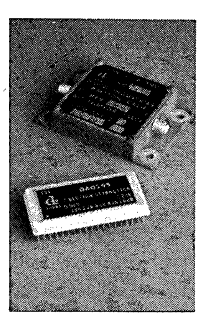
are products of state-of-the-art thin-film technology. Quality screened components, manufactured and tested to rigid Daico standards and numerous in-process quality tests, assures each device meets applicable MIL STD Specifications. Quantitative 100% final electrical tests are made with HP8505 Analyzers and HP9825 Computer controlled automatic systems. These data assure Daico High Reliability RF MIC components meet all critical design parameters, thus saving costly incoming testing.



MIC SWITCHES
- Thin-film MIC construction.
- DC – 4GHz
- SPST – SP24T
- Speeds < 5nS (10-90% RF)
- Internal TTL or CMOS drivers
- Internal 50 ohm terminations
- PC Board mount, Stripline or Connectorized



MIC VOLTAGE CONTROLLED ATTENUATORS
- Thin-film MIC construction
- Linear attenuation to 60dB
- Linearity to ±0.75dB
- Internal drivers
- Constant 50 ohm impedance
- PC Board mount, Stripline or Connectorized



MIC STEP ATTENUATORS
- Thin-film MIC construction
- Steps – 1 through 7
- Attenuation to 63.5dB
- Speeds < 5nS (10-90%RF)
- Internal TTL or CMOS drivers
- PC Board mount or Connectorized

DAICO QUALITY ASSURANCE

INTRODUCTION

Daico Industries, Inc., founded in 1967, is a leader in the DC-4GHz field of MIC's, Connectorized Solid State Switches, RF relays and both Digital and Voltage Controlled Attenuators.

Daico engineering, inspection, production, sales and service people are highly experienced and understand your requirements as well as the capabilities of Daico Industries. You can talk to us and get realistic answers. Our production and computer test equipment combined with our quality assurance procedures provide the necessary base to meet your most stringent requirements. We offer quality products at competitive prices. For a prompt response to your needs contact our local representative or the factory directly.

QUALITY ASSURANCE PROVISIONS

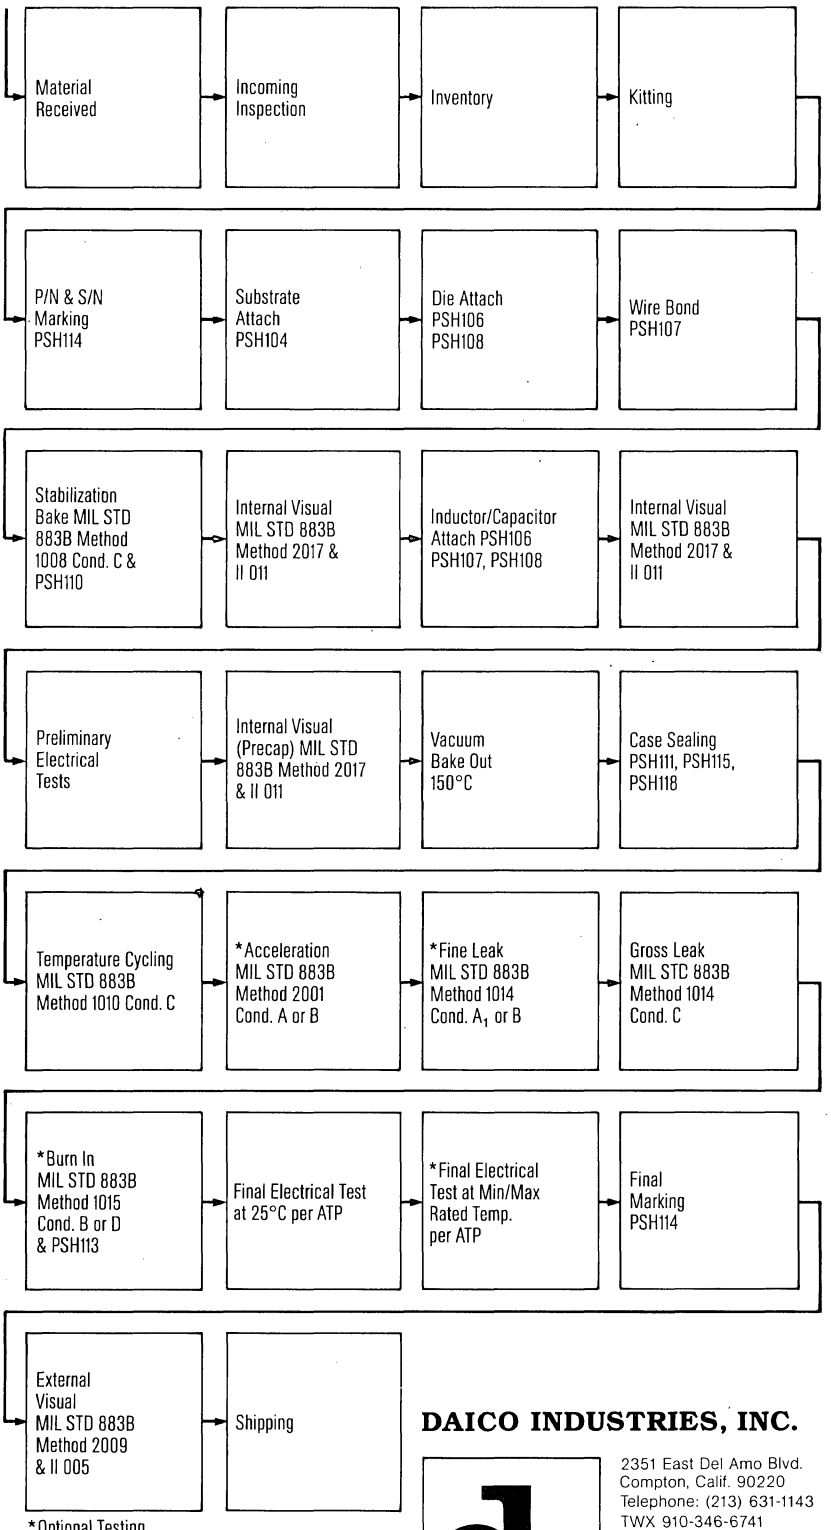
Daico quality is built into every unit through each manufacturing operation. Each new design is thoroughly tested in the engineering prototype state prior to being released to production. Only top quality components are used which must first go through extensive testing.

Workmanship Quality Manuals along with in-process inspection stations assure the product is built right, the first time.

The use of an Automatic Computer/Analyzer, complete with printer and plotter, provides a reliable, accurate and time-saving method for testing.

ADDITIONAL ENVIRONMENTAL TESTING AVAILABLE

Vibration:	MIL STD 202 Method 204 64g RMS, 1.5 hrs. each axis
Mechanical Shock:	MIL STD 883 Method 2002 Condition C, 3000g Y axis
Moisture Resistance:	MIL STD 883 Method 1004
Salt Atmosphere:	MIL STD 883 Method 1009
Thermal Shock:	MIL STD 883 Method 1011 Condition B, 15 cycles
Lead Integrity:	MIL STD 883, Method 2004 Condition B_2
Solderability:	MIL STD 883 Method 2003 260°C ±10°C
Resistance to Solvents:	MIL STD 883, Method 2015



*Optional Testing

PSH 104, 106, 107, 108, 110, 111, 113, 114, 115, 118, & II 005, 011 are approved DAICO in-process inspections and procedures.

DAICO MIC SWITCHES

The M.I.C. (Microwave Integrated Circuits) Switches are built utilizing Daico's inhouse Hi-Rel Thin Film Technology, which provides excellent stability over temperature extremes. All switches are encased in shielded hermetic enclosures providing maximum protection to the circuitry with minimum RF leakage. The switches include drivers compatible with TTL or CMOS. Frequency ranges from DC-2000 MHz with isolation over 75 dB are available.

Spec. Frequency MHz	Usable Frequency MHz	Part Number	Switching Speed Microsec.	Isolation dB Min.	Insertion Loss dB Max.	RF Power dBm	VSWR Max.	DC Power Volts	DC Power mA	Control	Termination Ohms	Package

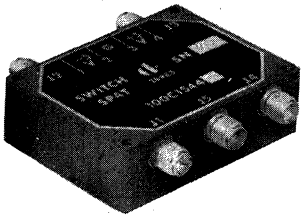
DAICO CONNECTORIZED SOLID STATE RF SWITCHES



The Solid State Connectorized Switches are available with SMA connectors. Units with BNC, TNC or N type connectors are offered on special order. Frequency ranges from DC-2000 MHz with switching speeds from 15 nanoseconds are obtainable. Switches with RF peak power to 3000 watts with reduced switching speed are also available. See page 1•1576 for High Speed and High Power Switches.

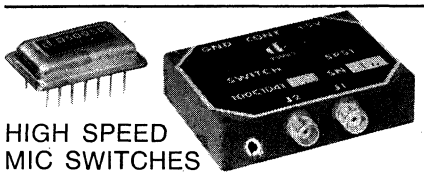
DAICO HIGH SPEED RF SWITCHES



HIGH SPEED MIC SWITCHES

Diaco's High Speed Switches are available in both M.I.C. (Microwave Integrated Circuit) as well as connectorized form. Switching speeds as low as 15 nanoseconds are available. The M.I.C. units are packaged in hermetic DIP configurations, while the connectorized units have SMA connectors for convenient cable attachment.

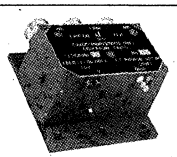
DAICO HIGH POWER RF SWITCHES



The Daico High Power RF Switches handle peak power to 3000 watts with CW power to 1000 watts. Frequency ranges from 1-2000 MHz are available. These High Power Diode Switches have been used successfully in numerous CW and pulse systems.

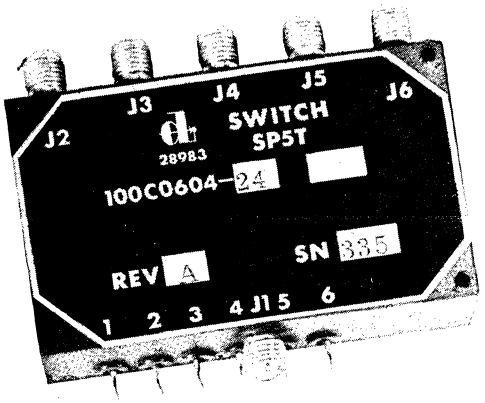
RF RELAYS

DAICO



Daico Industries RF relays employ hermetically sealed switching elements which provide extreme resistance to the severe environments encountered in military aircraft and communications systems, including 20 g's vibration to 3 kHz, 80 g's shock and altitude in excess of 100,000 ft. A continual test and evaluation program assures switch performance in excess of 20 million operations. These units are operable at extremely low current levels and may be ordered with 6-, 12-, 18- or 24-volt coils.

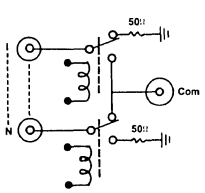
Switching Speed: 5 millisec. max
RF Power: 50W CW, 50W Peak
Drive Current: 24 mills nom. at 24 VDC. Other coils available include 6, 12, 18 VDC.



Units can be provided with Fail Safe (no power) to a through path.

Can be operated directly from TTL with integrated circuit 75450 Dual Driver, 54 45 Decoder or equivalent.

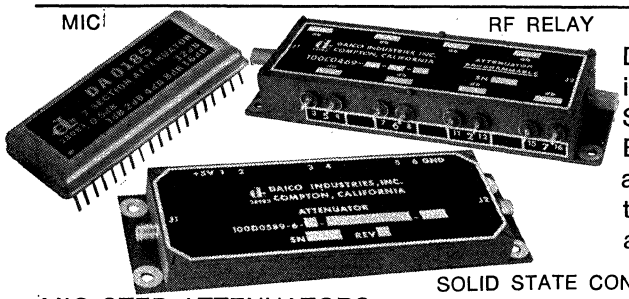
DAICO STEP ATTENUATORS



Daico's complete line of Programmable Step Attenuators include Thin Film M.I.C. (Microwave Integrated Circuits), Solid State Connectorized, as well as RF Relay Control. Binary steps from 1 through 10 are available with total attenuation values to 127 dB. Frequency ranges from DC to 2350 MHz are covered with switching speeds as low as 25 nanoseconds.

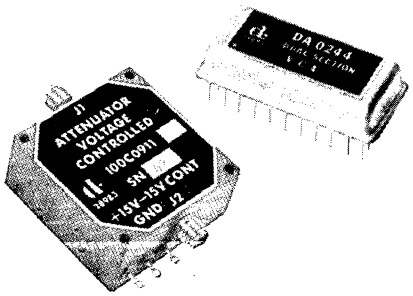
VOLTAGE CONTROLLED ATTENUATORS DAICO



The Daico Voltage Controlled Attenuators are available both as M.I.C. (Microwave Integrated Circuits) as well as in Solid State Connectorized form. Linearity of ±.75 dB from best straight line is achieved with frequency ranging from 10 to 1300 MHz. Constant impedance of 50 ohms is maintained at input and output ports over full attenuation range. VSWR over band is 1.25 typical.

DAICO QUALITY ASSURANCE

INTRODUCTION

Daico Industries, Inc., founded in 1967, is a leader in the DC-2 GHz field of M.I.C.'s, Connectorized Solid State Switches, RF relays and both Digital and Voltage Controlled Attenuators.

Daico engineers, inspection, production, sales and service people are highly experienced and understand your requirements as well as the capabilities of Daico Industries. You can talk to us and get realistic answers. Our production and computer test equipment combined with our quality assurance procedures provide the necessary base to meet your most stringent requirements. We offer quality products at competitive prices. For a prompt response to your needs contact our local representative or the factory directly.

ENGINEERING

Daico Industries, Inc. places major emphasis on our engineering department. The talents of our RF design engineers are not only supported by qualified technicians with the full-time use of a Hewlett Packard Automatic Test and Evaluation System, but desk top computers as well.

Our three Hewlett Packard desk top computers allow the optimum design to be realized at a fraction of the time it would take to obtain the same results manually. The ATE (Automatic Test and Evaluation System) combined with Daico software allows the production tests to be run accurately and quickly, with minimal chance of operator error.

Prior to any job going into production, breadboard units are built and evaluated by engineering. All changes are thoroughly evaluated before being released to production.

The emphasis and care Daico Industries, Inc. places on the engineering aspects of your job results in the best and most economical approach to meet your requirements.

ELECTRICAL PRECAUTIONS

For a device to operate properly, the body must be connected to RF ground and with a M.I.C. device, the body and unused pins must both be grounded.

All unused ports of a switch should be terminated in 50 ohms to obtain optimum characteristics of the unit.

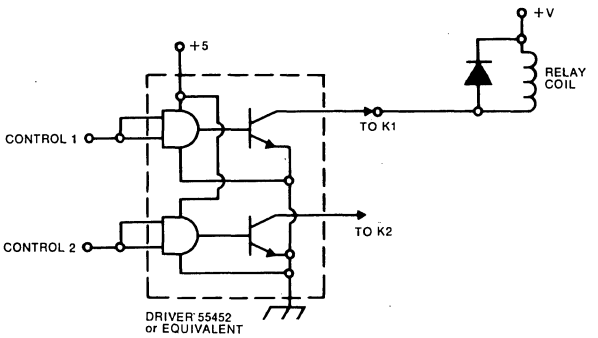
If a control line is to be at logic "0", it must be grounded.

The low current CMOS device drivers are static sensitive and precautions must be exercised to prevent driver damage.

Excess voltage, wrong polarity, or spikes on the DC supply or control lines may damage the device.

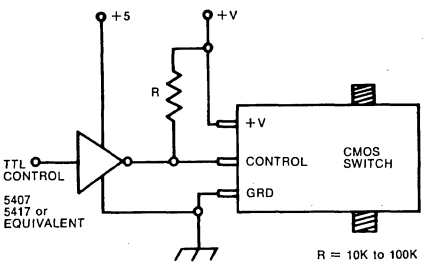
Only devices specified as having an all OFF or center position off condition may have all ports OFF. Most devices require one port to be ON at all times for proper operation.

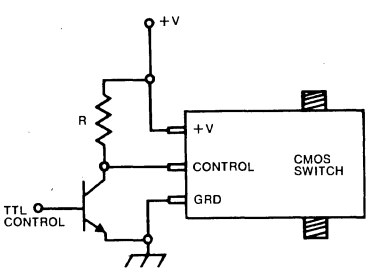
Specifications are applicable from 0°C to +71°C. Some derating of performance may occur when operated over the MIL temperature range of −55°C to +125°C.



RF RELAY DRIVERS

To drive Daico's RF relay switches, attenuators, or phase shifters, using TTL logic, the above is suggested. The driver is a dual section which allows one device to control two relays.





TTL TO CMOS INTERFACE

To switch CMOS Switch control lines with open collector TTL, the above is suggested to avoid damaging the CMOS Driver.

PERFORMANCE NOTES DAICO

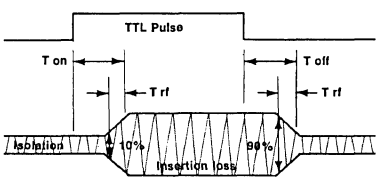
SPECIFICATION FREQUENCY vs. USABLE FREQUENCY

Although a device is designed for optimum characteristics over a specified frequency, the part is functional with slight performance reduction over a broader frequency range. This broader band is the Usable Frequency.

SWITCHING SPEED

A review of the adjacent figure will reveal that the switching time T_{on} is measured from the 50% point of the leading edge of the square wave control (TTL, CMOS or ECL) to the 90% point of the leading edge of the resultant RF envelope. Similarly, T_{off} is measured from the 50% point of the trailing edge of the square wave control pulse to the 10% point of the trailing edge of the resultant RF envelope. Switching speed is defined as the greater of these two values.

Of specific interest is the RF switching envelope which is defined as T_{rf} from 10-90% of the RF envelope. Systems requiring excessively high speed operation occasionally program the switch operation with a delay or anticipatory circuit to be able to accommodate only the T_{rf}. Values of five nanoseconds are readily available.



TRANSIENTS

During the switching of one part to another, video transients are incurred with characteristics that are occasionally disturbing to RF components following the switch. Daico Industries has over the years developed balanced designs which will provide less than 10-15 millivolts of in-band transients at switching speeds (T_{rf}) of 5-10 nanoseconds. Where lower transients are required during the switching period, it is recommended that slow switching speeds be tolerated or discussed with the manufacturer.

ISOLATION

The minimum isolation in dB is the worst case condition over the specification frequency between any two ports, with all other ports terminated in 50 ohms.

INSERTION LOSS

Insertion loss is defined as the worst case path loss between the input port and any output port in the "ON" state with all other ports "OFF" and terminated in 50 ohms. Insertion loss for attenuators is measured with zero or minimum attenuation level from the input to output and is as the reference level for all attenuation values.

NOISE FIGURE

Experience has shown that the Noise Figure (N.F.) of a switch may be assumed to be equal to the Insertion Loss. This assumption can be made without introducing substantial error.

RF Power

The RF power level (measured in dBm) is the level of CW input power that results in not more than 0.1 dB compression at the output. The maximum RF power level is also the maximum signal level at which the device will meet all RF specifications.

VSWR

The maximum VSWR in a 50 ohm system applies only to the thru condition, unless otherwise specified. Devices with open or short to ground terminations exhibit total refection.

DC POWER

The typical current for the maximum regulated DC supply voltage is listed. Exceeding the DC voltage may damage the device.

CONTROL

The driver control circuitry is listed as either TTL or CMOS. TTL devices may be driven directly from system TTL outputs. 5 volt CMOS devices may be driven directly from system TTL outputs with a pull up resistor to +5 volts. Hi-voltage CMOS devices (8 to 15 volts) may be driven with TTL using a pull up resistor to VCC with an open collector transistor, or the 5400 series of Hi-voltage TTL compatible buffers. CMOS control lines should be pulled up to VCC to prevent possible damage to internal drivers.

RF relays may be made TTL compatible using the SN55450 series of relay drivers.

TERMINATION

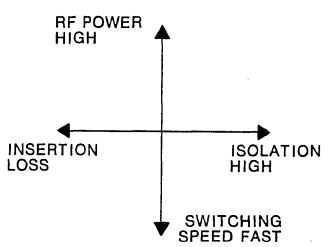
Internally terminated switches are so defined.

PACKAGE OR SIZE

The outline configuration is given in inches or standard DIP configurations. The DIP package has .100″ pin spacings with .300″ pin rows. A DDIP has .600″ pin rows.

CUSTOM/OPTIMIZED DESIGNS

Daico Industries' engineering department welcomes your inquiry regarding special applications or optimized designs. An approximate guide regarding trade-offs are presented in the attached figure, i.e., high power means lower switching speed: high isolation suggests higher insertion loss.

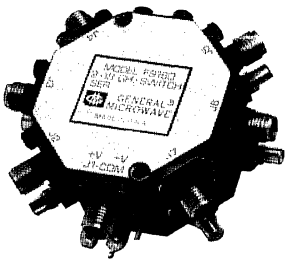


EEM PRODUCT SELECTION GUIDES

Use the EEM Product Selection Guides. There are 33 Guides in this edition of EEM. See page 2 (1•2, 2•2, 3•2) of each volume to locate the Product Selection Guides that pertain to your needs.

PIN DIODE CONTROL DEVICES FROM GENERAL MICROWAVE

PIN Diode Switches

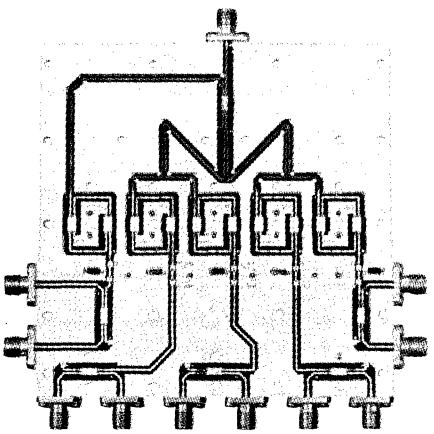


General Microwave's complete line of high performance broadband switches, with and without integral drivers, are available in three basic series.

- Ultra Broadband Series: 0.2 to 18 GHz, SPST to SP5T
- Multi Octave Band - Miniature Series: 0.2 to 4 GHz (Series 92) 2-18 GHz (Series 91); SPST TO SP7T
- Octave Band - High Speed Series: 10 nsec switching speed, 2-18 GHz; SP2T

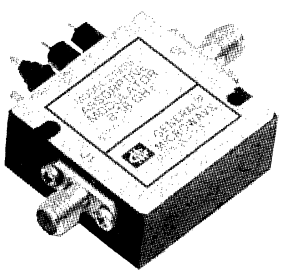
Many models of each type are available to satisfy most requirements. Non-reflective switches, space qualified units and other special designs are also available.

MIC Assemblies



General Microwave MIC assemblies can combine: • Frequency Translators • High Speed Digitally Controlled Attenuators • Power Combiners and Dividers • High Speed Switches • Mixers • Amplifiers • Isolators • Directional Couplers • Phase Modulators • Filters and other signal conditioning and processing devices.

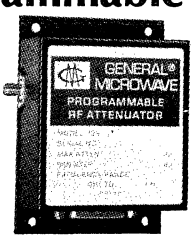
PIN Diode Modulators/ Attenuators



General Microwave's Series of PIN diode modulators/attenuators provide octave-band and greater than octave-band performance from 0.5 to 18 GHz. All at low cost.

Series	Bandwidth	Atten. Range (dB)	Control
D195	Octave	60	Linear Voltage
D196	Multi-octave	60	Linear Voltage
195	Octave	60	Current
M180	Ultra-broadband	60	Linear Voltage

Digitally Programmable PIN Diode Attenuators



General Microwave's Series of Digitally Programmable PIN Diode Attenuators provide octave-band and greater than octave-band performance from 0.2 to 18 GHz with wide programming flexibility. All at low cost. Their compact, rugged packages are well suited to military applications. They are available in drop-in module type configurations and hermetically sealed packages. Nanosecond switching speed modules are also available.

Series	Bandwidth	Atten. Range (dB)	LSB (dB)
329	Octave	80&120	0.1
345	Octave	60	0.25
346	Multi-octave	60	0.25
325	Ultra-broadband	120	1.0

WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

HIGH QUALITY ATTENUATORS!

Kay switch attenuators are constructed with patended switches using teflon housings and gold plated silver contacts. These high quality switches have been field proven for over 10 years. All Kay attenuators are equipped with precision resistors.

Kay rotary switch attenuators are gold plated printed circuit contact with dual contacts at each connector. This design provides superior electrical contact.

Kay has designed over 200 special attenuators for OEM applications using our extensive design capabilities. We can adapt our current line to fit specific requirements.

Please call or write for our complete attenuator catalog.

OEM PROGRAMMABLE ATTENUATORS

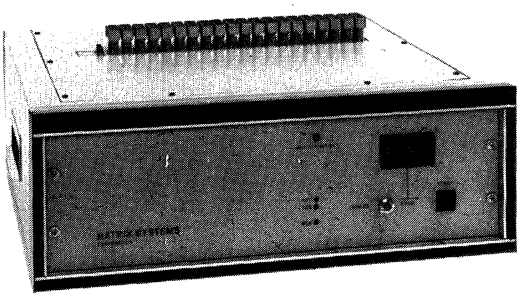
COAXIAL SWITCHING SYSTEMS

PORTABLE PROGRAMMABLE COAXIAL SWITCHING SYSTEM



Model 2450 is a unique switching system incorporating provisions for controlling up to ten 7000 Series Coaxial/Twinaxial relays from the IEEE-488 Bus, or from RS-232C Serial, or from 8 and 16 bit parallel inputs. Front panel manual control is standard.

Up to 200 coaxial switchpoints located on the top of the unit offer the user easy accessibility. These can be configured into a 10 x 20 matrix, for instance, using ten matrix model 9410 push-on cross straps.

See relay module specifications on adjacent page.

Switchpoints can also be configured as a 1 x 200 scanner/multipler or a variety of multiple multithrow configurations by merely changing the positions of the push-on cross straps.

The user may purchase a few relay modules to start with and easily add additional modules in the field any time in the future.

The 2450 will accept all eight 7000 series relay styles and all options listed shown on the matrix 7000 series data sheet. Note that the number of matrix positions is standardized at twenty. On special order the 20 positions can be electrically divided into several sub-sections (ie: three separate six throw relays, etc.)

The front panel manual thumbwheel controll allows the operator to switch from remote to local control and set or reset any switchpoint manually without disturbing any other point settings. The "SWITCHPOINT SET" indicator on the front panel verifies that the unit is receiving commands and that one or more points is set.

If more that two hundred switchpoints are required, the system can be expanded by adding another Model 2450 and specifying expander option on the relays, cross straps, or both. For instance, two Model 2150's, each configured as a 10 x 20 matrix can be expanded to either a 20 x 40 or a 10 x 40 configuration.

When ordering a system, specify the quantity and model number of the relays and cross straps desired. One Model 2194 control card and cable assembly is required for each relay. Choose the 2450 for your portable and test switching needs.

SPECIFICATIONS

CAPACITY:	One to ten 7000 Series 20-Throw Coaxial relays. (User must specify type and quantity.)
REMOTE CONTROL:	IEEE-488 GP-IB is standard. Specify -R for RS-323C or -M for 8/16 bit microprocessor control.
MANUAL CONTROL:	Front panel BCD Thumbwheel switches are standard.
OPERATING TEMPERATURE:	0°-70°C
LINE VOLTAGE:	105-125 VAC
LINE FREQUENCY:	47 to 63 Hz
SIZE:	7"H x 19.2"W x 18.6"D

Matrix Systems Corporation manufactures a variety of Switching Devices. Whether you are Switching VHF, Video, Pulse or Audio or your control requirements are programmable or manual. Give us a call. We specialize in specials. (213) 992-6776

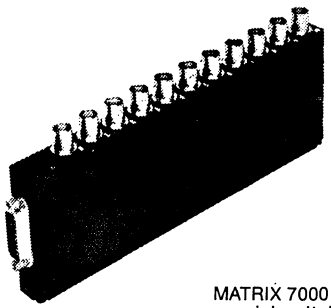
COAXIAL RELAY MODULE



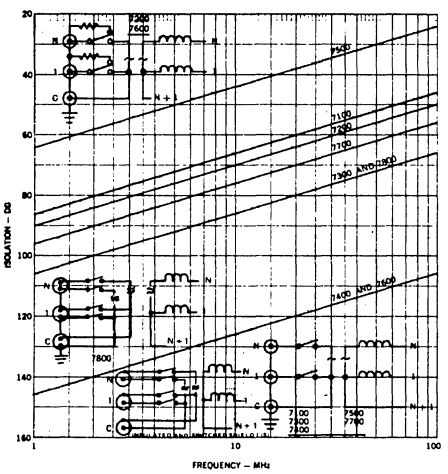
FEATURES

- Two to twenty throws
- Continuous shield continuity
- Rugged machined aluminum housing
- Crosstalk always less than isolation
- Switchpoints individually field replaceable
- Extremely low EMI
- Low VSWR
- Maitrix configuration easily assembled using 9000 series cross straps
- Signal circuits isolated from control circuitry

MATRIX 7000 Series Switch Modules are designed to maintain coaxial switching continuity over a wide range of critical and high environmental applications. The switch housings are constructed on precision machined aluminum alloy for structural integrity and hard anodized for durability. All signal shield paths are silver plated with covers gasketed for maximum EMI protection. The basic reed switch elements are hermetically sealed in nitrogen filled gas envelopes and employ rhodium plated contacts to insure non-stick operation. Applications for MATRIX 7000 Series include:

— R.F. and I.F. switching where a low VSWR is required .
— CCTV, base band video and pulse switching where low phase distortion and high pulse fidelity are required.
— Applications requiring a high degree of shielding integrity and low contact and induced noise such as pre amp input switching or the switching of high impedance operational amplifier inputs.

Matrix and hybrid switching systems are easily constructed by using Series 9000 (no output), 9100 (one output) or 9200 (two output) push-on cross straps which mate with the BNC connectors on the switch modules. The cross strap output connectors are BNC female type UG 1094/U. The model number of the cross strap is assigned by replacing the two zeros of the series number with the number of inputs desired. For example, a Model 9108 has eight inputs and one output.



SERIES 7000

7100— Standard
7200— Self-terminating
7300— High isolation
7400— Highest isolation
7500— High power
7600— Highest isolation self-terminating
7700— Mercury wetted contacts
7800— Twinax

MODEL NUMBER ASSIGNMENT

7 X XX -X

Series

Number of throws

Coil suppression diodes — D
TNC connectors — T
Self-terminating resistance — ohms
Insulated shield — I
Insulated and switched shield — IS
Expander output — E

Many of the above options may be combined

SPECIFICATIONS

FREQUENCY RANGE:	0 - 300MHz
CHARACTERISTIC IMPEDANCE:	50 ohms - 75 ohm optional
SWITCHING CONFIGURATION:	Single or double pole, two thru twenty throws
SWITCHING SPEED:	Less than one millisecond
ISOLATION:	See graph
CONTROL - CONNECTOR:	28 VDC,30 MA D type - subminiature connector
SIGNAL CONNECTOR:	BNC - UG1094/U, TNC and SMA optional
OPERATING TEMPERATURE AND HUMIDITY RANGE: −30°F to + 150°F, 0 to 98 percent R.H.	
OPERATING SHOCK AND VIBRATION:	50 G's -1MS,2G's p-p 20-2000 Hz
DIMENSIONS:	.625" W × 3.25" H × 1.44" + .625" × Number of throws
MOUNTING:	Three 6-32 tapped holes in base

C 71-3 REV. A

reliability and

All Mini-Circuits' RF signal-processing components are subjected to rigid quality control procedures starting from raw material procurement through product production and final inspection; the objective—to supply our customers with the finest RF signal-processing components available. Here's a list of some of the procedures taken to insure high-quality performance and product reliability:

A. 100% testing of each diode.

B. 100% testing of each unit.

C. 100% inspection of every solder connection.

D. All transformers bonded to the header for protection against severe shock and vibration.

E. All diodes, resistors and capacitors bonded to the header for protection against severe shock and vibration conditions.

F. Diode and resistor power dissipation derated greater than 50%.

G. All components rated for greater than + 125°C.

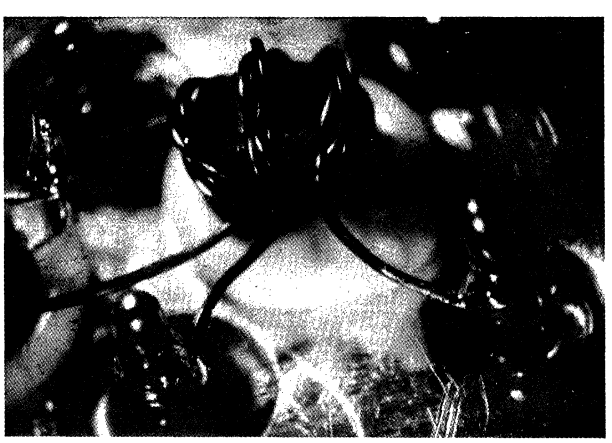
H. All transformer leads double wrapped.

I. Heavy coated wire insulation for HiPot/altitude.

J. Completely encapsulated for protection against mechanical shock and vibration as well as temperature shock.

K. Permanent case marking of model number cannot be removed by cleaning agents.

L. Cupro-Nickel case for long-lasting finish especially under salt atmosphere conditions.



Every unit shipped from Mini-Circuits carries a full-year guarantee; in fact, our industry-standard SRA-1 mixer offers an exclusive three-year guarantee.

hi-rel components

High-temperature, Reverse-bias (HTRB) testing is an accelerated-life screening test generally reserved for space applications. Here the Schottky and PIN diodes are subjected to a one-volt negative bias at 150°C for 168 hours. The objective of this accelerated aging stress is to force time/temperature-related failures and thus screen out potentially unreliable devices; in conventional "baking" processes, the diode does not experience anywhere near the stress imposed by the HTRB program. The result: highly-reliable Schottky and PIN diodes ready for wiring into assemblies.

Next, the assembled units are subjected to additional testing procedures including
(1) burn-in for 96 hours at 100°C with 8 ma at 1 KHz
(2) thermal shock per MIL-STD 202, Method 107
(3) Gross and fine leak tests according to MIL-STD 202, Test Method 112B, Conditions A and C

As a consequence of the above HTRB, final seal, and burn-in testing, Mini-Circuits components offer an unprecedented high level of reliability. In fact, Mini-Circuits' industry-standard SRA-1 is the only double-balanced mixer in the world to be offered with an exclusive *three-year* guarantee.

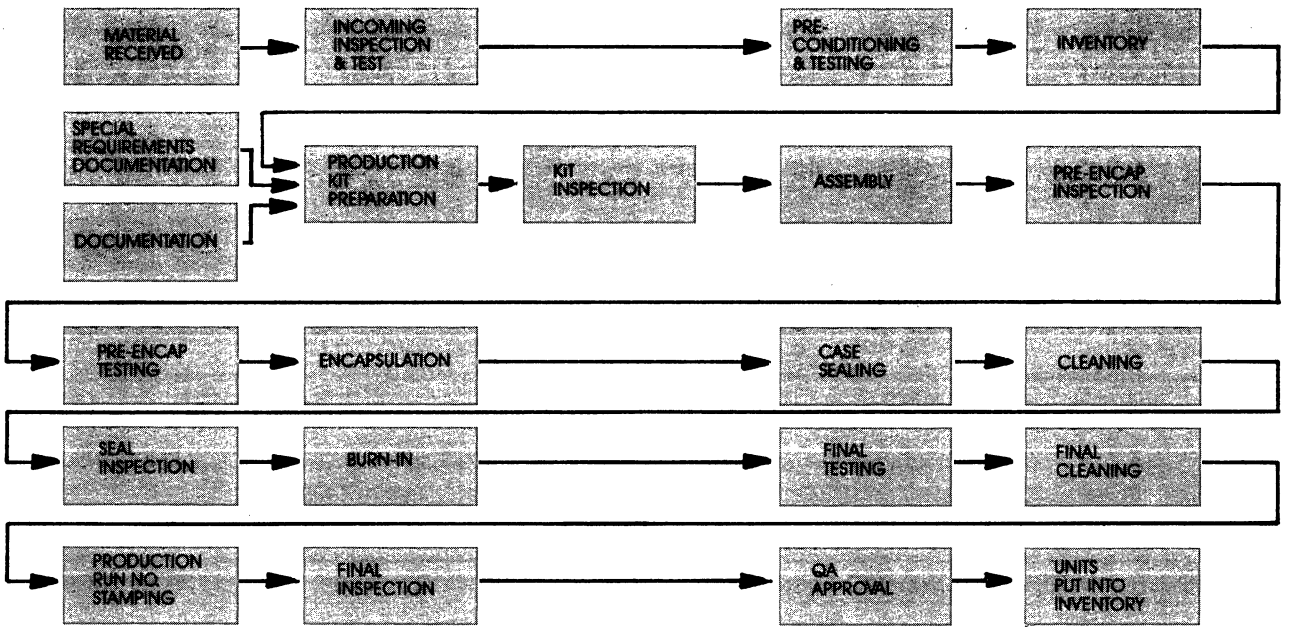
TX mixers

For the most critical space, military or industrial applications in hostile environments, Mini-Circuits offers TX mixers. Stringent screening and stressing are applied to the TX mixers which employ TX hermetically-sealed diodes that have passed the following tests per MIL-STD-750:
(1) high-temperature storage for 340 hours at 150°C, Method 1032; (2) thermal shock, Method 1051, Test Condition C (−65°C to +150°C, 10 cycles); (3) constant acceleration, Method 2006, Y1 orientation, 20,000 G's; (4) fine leak, Method 1071, Condition H; (5) gross leak, Method 1071, Condition C; (6) burn-in for 96 hours at 25°C, 75mW/junction at 60 Hz, Method 1038, Condition B.
Those diodes that pass these rigid tests are then electrically tested to ensure that they meet specifications. They are then assembled into TX mixers which are then further exposed to these stress tests: (1)thermal shock, MIL-STD 202, Method 107; (2) burn-in for 96 hours at 100°C, with 8 ma at 1 KHz; (3) gross and fine leak, MIL-STD 202, Method 112B, Conditions A and C
The SRA-1TX is the first off-the-shelf TX mixer in the industry available for immediate delivery. All other Mini-Circuits' mixers are available with TX screening and testing.

Mini-Circuits P.O. BOX 166, Brooklyn, New York 11235 (212) 934-4500

quality control

how Mini-Circuits achieves high reliability



environmental specifications

All MCL components are manufactured under exacting quality assurance and control standards. They will meet or exceed published specifications over the operating temperature range of −54° to +100°C, and after being subjected to any or all of the following physical or environmental tests of MIL-STD 202E which are applicable.

	TEMPERATURE CYCLING: −65° to +125°C	102 C
	ALTITUDE: 656,000 feet	105 G
(2)	HUMIDITY: 90% RH, 65°C	106
	THERMAL SHOCK: −65°C to +125°C	107 B
(1) (2)	SEAL: Less than 10^5 Atm. cc/sec	112 A
	DROP: Random, 45 min.	203
	VIBRATION: 2 to 2,000 cps, 20g, 12 hrs.	204 D
	SOLDER HEAT: 260°C, 10 sec.	210 B
(1)	SOLDERABILITY: 95% coverage	208
	TERMINAL TENSILE STRENGTH: 4½ lbs., 10 sec.	211 A
(1)	TERMINAL FATIGUE: 2 lbs., 3 cycles	211 C
	MECHANICAL SHOCK: 100g, 6ms	213 I
	SOLVENT RESISTANCE: Alcohol, Trichloroethan, Freon	215

NOTE:

(1) These specifications do not apply to coaxial connector models.

(2) Exceptions are non-hermetic case styles 6, 38, 46.

absolute maximum ratings

OPERATING AND STORAGE TEMPERATURE	−55°C to +100°C
PIN TEMPERATURE (10 sec)	+260°C

eliminating guesswork in systems design

CAPD (computer-automated performance data)

Today, RF and Microwave subsystem and system designs must be more precisely detailed as performance demands become more stringent. Radars must be more accurate, communications systems must be more noise-free, and guidance systems must be more rigorous, and all are required to meet quality and reliability levels considered unattainable a decade ago. These new demands place a heavy burden on the design engineer, the project manager, the quality assurance group...and the suppliers of the components to be assembled into these systems. In addition to the stricter performance and reliability specs, the designer faces escalating costs if, at the last stages before system delivery, unexpected surprises occur in the form of spurious signals, high VSWR or other pitfalls not anticipated.

Until now, the designer selected his RF/Microwave components, such as mixers, power splitters, and amplifiers, using manufacturers' data sheets to provide detailed specs, performance curves, and environmental ratings. Indeed, the design engineer did receive a workable package of information to see how his design might proceed...but it was not a detailed, close-up look. The reason is simple—it has just been too expensive to take an enormous number of test points, at a considerable number of specific frequencies, tabulate the results and then repeat at other input levels.

As an example, a two-tone intermodulation distortion chart for mixer performance would require at least 100 measurement points plus 10 additional calibration points and would take an experienced technician at least a half-day to complete.

For those customers who required their data at specific frequencies or under conditions other than is offered on the manufacturers' data sheets, extra charges were justifiably added to offset the additional labor costs.

Now, a new computer-automated performance data (CAPD) service offered exclusively by Mini-Circuits to its customers at no additional charge. Based on over 20 years of RF test experience and six years of engineering manpower-hours, the CAPD service provides detailed specs never available previously on mixer conversion loss, isolation, VSWR and intermod; for directional couplers and power splitters, details on insertion loss, isolation, phase unbalance and VSWR vs. frequency; for amplifiers, VSWR, gain changes and compression point vs frequency. In fact, all Mini-Circuits' products are available with CAPD specs.

test setup is self checking

The heavy investment in CAPD, using a Hewlett-Packard Model 85 computer and HP8566A spectrum analyzer as key elements, allows the previously-mentioned, two-tone IM test to be completed in less than ten minutes compared with the manually performed sequence requiring 4-5 hours. Here's how stringent the computer-automated set up dictates each measurement: each point is measured three times, with a maximum allowable deviation of less than 0.05 dB between the three; otherwise the test is repeated. Before each measurement is taken, the computer checks the reference voltage level for any variation due to line voltage, temperature, etc., changes and compensates as required. Similarly, frequency is monitored before each test and any drift is automatically corrected. Such continuous and rapid inspection and correction ensure highly-reliable CAPD data. And, by using a large number of closely-spaced frequency points for component measurement, effects of narrow-band suck-outs or resonances (often missed with manual test procedures) are immediately identified.

Mini-Circuits P.O. BOX 166, Brooklyn, New York 11235 (212) 934-4500

Mini-Circuits

a close-up view of performance

What's the significance of CAPD to the designer? Is it a sales "gimmick" or is it truly a design tool? Review these points and judge for yourself.

A competent RF/Microwave design engineer, drawing on his experience and expertise over years of varied projects, still must be concerned with unforeseen problems when the prototype is first turned on. Generation of spurious signals, changes in dc offset level, affects of LO drive variations and other vexing problems often become evident to extend delivery time and escalate costs. In many instance, a more precise definition of the component specs could have pinpointed the potential problem areas; with CAPD, it's now possible.

Let's assume you are specifying a double-balanced mixer for a wideband front-end design. Here are a number of profound questions you face:

- In a wideband design, the local oscillator (LO) output might vary over the band and could fall below the level requried by the mixer spec. Should you spend additional money to flatten LO output or do you boost LO output if it is not sufficient?... Wouldn't it be valuable to know exactly how performance will be affected since you might find performance acceptable without any additional investment? with CAPD, a close point-by-point printout of key parameters as a function of LO level is available (fig. 1) — now you can make your decision based on a close-up, view of LO drive effects on mixer performance.
- How about VSWR over the full range of receiver specs? Generally, mixer VSWR specs are given at one particular frequency. With manual-test procedures, it's a time-consuming task for the components manufacturer or systems house; with CAPD it's available at no extra charge (fig. 2).
- How does the filter in the design match the mixer IF output and what is the impedance match in-band as well as out-of-band where spurious responses become a threat? CAPD VSWR data tells it all. How will the mixer conversion loss affect receiver sensitivity over the full frequency range? And, how will flatness of conversion loss affect the degree of image rejection in an image-reject mixer? CAPD data (fig. 1) will pinpoint these details.

If the mixer is being used as a phase detector, it may be critical to know how dc offset voltage varies with frequency. Most mixer specs list dc offset at only one frequency; with CAPD, this parameter is given over the full range of frequency (fig 4).

- Harmonic and intermod signals invariably plague your final design. The effects of, for example, a 4th harmonic of the LO mixing with the 5th harmonic of the RF is given on many spec sheets, but at a specific LO and RF level. The effects of LO level changes might be crucial to your design; with manual point-by-point testing, extensive and costly technician test time would be demanded or, more likely, such tests just won't be performed. With CAPD capabilities, such intricate interactions are quickly run, and made available to the designer (fig. 3).

If you are specifying directional couplers and/or power splitter/combiners in your systems, you can now closely examine how VSWR, insertion loss, isolation and amplitude/phase unbalance vary at closely-spaced points over the frequency range of interest, (fig. 5). You can now evaluate the effects of the VSWR of the termination at the S-port and, another industry-first, inspect intermod data of a power splitter caused by saturation of the cores within the unit.

Amplifier performance is clearly shown with CAPD data as a function of dc power supply changes, (fig. 6). You'll be able to closely examine how VSWR, compression point and gain are influenced by dc supply fluctuations; this could reduce your power-supply costs, since it will conveniently point to the degree of voltage regulation required to meet the amplifier performance needed. Also, it's common to furnish amplifier specs over the frequency band of interest, but CAPD testing offers an opportunity to examine the amplifier characteristics, outside the band to foresee the effects of harmonic and spurious signals; for example, an amplifier that is flat to 1200 MHz offers what gain and what VSWR for second-harmonic 2400 MHz signals? Knowing these details can thwart potential systems problems.

Even a relatively common component such as an RF transformer is now available with CAPD data, (fig. 7). The significance...previously insertion loss vs frequency was considered flat over a specified frequency range. With closely spaced CAPD test prints, even slight variations which could affect systems performance become apparent.

CAPD is your microscope

Look at CAPD as a microscope, revealing the "real world" details affecting your design decisions. Most important, CAPD was involved with one uppermost objective—to assist you, the design engineer, in producing a more effective end product. To accomplish this, you may require CAPD data at very specific frequency points not provided by our programmed steps. Not to worry...just furnish us with precise needs for your specific application. Be assured we'll do our best to comply.

CAPD now available! computer-automated performance data

the World's No.1 Mixer

SRA-1, the world's only mixer 3-year guaranteed and screened for HTRB, thermal shock, burn-in, and hermeticity. MIL-M-28837 performance* at only $11.95 (1-49)

Our 3-year guarantee is still unique today... even though we have been offering it for the past five years.

Here is how we achieve it. The diodes are the most critical component in the mixer. So to start, we use an accelerated life screening test generally reserved only for space applications. The HTRB-screened Schottky diodes are subjected to a one-volt negative bias at 150° C for 168 hours, a stress designed to accelerate ageing and force time-related failures—thus screening out potentially unreliable diodes.

In addition, further stressing and testing are performed on the assembled unit. Each completed SRA-1 experiences:
1. Burn-in for 96 hours at 100° C with 8 mA at 1 KHz.
2. Thermal shock. 3. Gross and fine leak tests (per MIL-STD 202).

Don't settle for an imitation. Specify Mini-Circuits' SRA-1, the only double-balanced mixers with a three-year guarantee. Immediate delivery, of course.

SRA-1 SPECIFICATIONS

mastering the mixer maze...

or selecting the right model for your application.

Mixers are abundant in electronic systems ranging from inexpensive consumer products to sophisticated military hardware. You'll find them in video games, TV sets and video cassette recorders as well as communications gear, test instruments, radar units and countermeasure systems. Mini-circuits offers well over a hundred different off-the-shelf models with thousands of variations. Different connector configurations, tighter specs, Hi-Rel options are available on request. Improper mixer selection bears a penalty—underspecify and face marginal performance; overspecify and pay extra for unnecessary performance characteristics.

making the right choice

Simply stated, there are three basic steps—
(1) deciding on a printed-circuit (PC) or connector version, (2) selecting the mixer level required in the applications, and (3) picking a model that extends over the frequency range involved. Sounds simple enough so let's examine some of the details.
The first step involves the decision on whether the mixer will be mounted to a PC board or be connected by cable to other subsystem components. The next two steps require understanding your specific needs; so it is strongly recommended that you organize the requirements for your application and put it in writing. Decide what frequency range is involved, the LO drive available, the level of harmonic and two-tone, third-order intermodulation (IM) distortion you can tolerate and other dynamic range factors, see Fig. 1.

1 dB compression point key to mixer level

What does the 1 dB compression point signify? As RF input level is increased, IF output should follow in a linear manner. However, after a certain point, IF output increases at a lower rate until mixer output becomes fairly constant. The point at which IF output deviates from linearity with RF input 1 dB is termed the 1 dB compression point. This figure is useful in comparing dynamic range, maximum output and two-tone performance of various mixers. It is a basis on which mixer level is established.

The 1 dB compression point, which defines the linearity of a mixer at high RF input levels, is relatively simple to test and thus this parameter is included on data sheets supplied by all mixer manufacturers. But, in real life, mixer linearity may be specified in accordance with the intended application. For example, in a receiver application, two-tone, third-order intermod may be the critical parameter; for TV applications, percent distortion or intercept point may be specified; and in an attenuator measurement system, compression point may be important for a given RF input level. With this in mind, the engineer needs a convenient means to relate the particular parameter for his application with the published spec, the 1 dB compression point.

Fig. 1 lists the various ways mixer linearity might be specified.

FIG. 1
Dynamic range parameters affecting mixer selection

1. maximum RF input level anticipated
2. percent distortion acceptable
3. intercept point
4. Two-ton, 3rd order IM_____dB at _____dBm, RF input
5. 1 dB RF input compression level
6. LO power available
7. none of the above specified

Let's convert every parameter with the published 1 dB compression point and then show how simple it is to select the proper mixer level, *see Fig. 2 for Mini-Circuits' mixer level/1 dB compression point chart.*

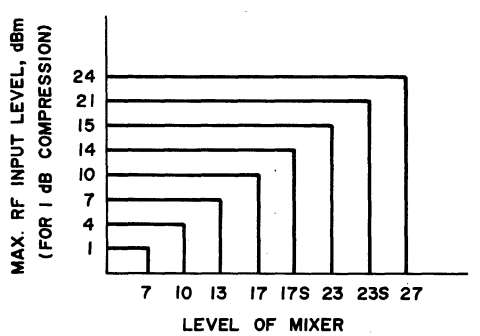

FIG. 2 THE 1 dB COMPRESSION POINT AS A FUNCTION OF THE LEVEL OF MIXER.

Mini-Circuits P.O. BOX 166, Brooklyn, New York 11235 (212) 934-4500

1. Maximum RF input level anticipated. If you know this parameter, simply select the lowest level mixer whose maximum RF input level exceeds your requirement. For example, if the maximum encountered RF level is +5 dBm, select a Level 13 mixer, rated at +7 dBm maximum RF input for 1 dB compression point.

2. Percent distortion. The percent distortion is usually specified in voltage. Thus, a 0.1% distortion figure means 0.999 of the input voltage appears at the mixer output. Next, convert this voltage ratio to a power ratio in dB by squaring and taking ten times the log. The resultant figure is the amount cf compression for the specified RF input level. Now this must be extrapolated to 1 dB compression for a corresponding RF input level. As a rule of thumb, extrapolation may be achieved by assuming a linear relationship, in dB, between compression and RF input level. So a ten-times increase in compression corresponds to a ten-times increase in RF input level.

Let's illustrate with an example using a 0.1 percent distortion spec at −10 dBm RF input level. The 0.1 percent corresponds to a 0.999 voltage output; squaring this yields 0.998 power ratio or 0.009 dB. We, therefore, know that 0.1% distortion at −10 dBm input means the maximum allowable compression is 0.009 dB. Extrapolating, using the rule-of-thumb relationship, states that 0.09 dB compression corresponds to an allowable RF of 0 dBm, and further extrapolating results in 0.9 dB compression at a maximum allowable RF input level of 10 dBm. So which mixer level is appropriate? A Level 17S, with +13 dBm RF Input level at the 1 dB compression point, see Fig. 2.

3. Intercept point.

This parameter is a figure of merit corresponding to the amount of intermodulation products generated relative to the desired IF output. An intercept point can be defined for a second order, third order, fifth order, product, etc. As a rule-of-thumb, two-tone third order intercept point is approximately 15 dB above the 1 dB compression point. So, if the intercept point figure is given, merely subtract 15 dB from this figure and pick a mixer which meets the 1 dB compression point spec, see Fig. 2.

4. Two-tone, third-order intermodulation (IM).

When a two-tone, third-order IM spec is given, the intercept point can be calculated. Remember that for each 10 dB increase in signal level, there is a 20 dB degradation in two-tone, third-order product. Once the intercept point is calculated, simply subtract 15 dB from the figure to find the 1 dB compression point and select the appropriate mixer.

5. 1dB Rf input compression level.

This key parameter is listed on mixer spec sheets so merely choose the lowest level mixer that will meet the requirement.

6. LO drive.

The LO dirve is critical since the function of the LO drive is to switch the mixer diodes fully on and off for lowest distortion. So, for optimum performance, select the mixer level to match the LO drive. Mini-Circuits conveniently identifies its mixer levels by the LO drive requirement; thus a Level 7 mixer refers to a LO drive level of +7 dBm. If there are constraints on the LO power available, select the lowest level mixer closest to the available LO power. For example, if +12 dBm LO drive is available, select a Level 10 mixer.

7. No particular spec to meet.

Choose a Level 7 mixer. Why? Because it is the most popular and it offers the widest choice of models at lowest cost.

Freq. range last deciding factor

Once the mixer level has been decided, you may find a wide variety of models to exercise your decision making. You may notice models within a series with overlapping frequency ranges. Why? So you can choose the optimum mixer for your requirement. Each model within a series has a different low-frequency limit. Select a mixer with the highest low frequency limit and whose mid-band range best covers your application.

Specs on the data sheets are given in three ranges. The lower frequency range, L, covers the lowest specified frequency to one decade higher; the upper frequency range, U, covers the highest frequency to one octave lower and mid-range, M, covers the frequency between L and U. Thus, a mixer specified from 0.5 to 500 MHz could offer a low-frequency range of 0.5 to 5 MHz, an upper frequency range of 250 to 500 MHz, and a mid-range of 5 MHz to 250 MHz.

What about "Specials"?

Although most Mini-Circuits mixers are 50 ohm devices, models are available in 75 ohms. Need connector types different than those listed for standard models? No problem. Some applications require matched mixer pairs that must be amplitude (conversion loss) and phase matched. Most Mini-Circuits mixers are tested to within 0.2 dB for the entire production run. Not tight enough? Let us know your exact requirement and we'll screen and test to meet it.

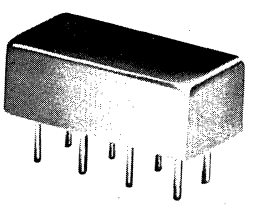
In summary, contact us about "specials" and we'll do our best to satisfy your needs without excessive cost or delivery date extensions. Sometimes, "special" means shipping a quantity of mixers within a very short time span; since Mini-Circuits is the largest manufacturer of mixers in the world, this may hardly be considered "special" and you may be pleasantly surprised. Try us.

order Mini-Circuits Q&A No. 4 Now...

There's lots more to mixer specs, applications and testing. Phone or write for Mini-Circuits' Q&A #4 for a provocative question-and-answer exchange on these topics.

CAPD now available! computer-automated performance data

the miser mixers



$3.95
100 PIECES
$4.50 (10-49)

the lowest priced mixers in the world **for demanding industrial applications**

the SBL-1 from Mini-Circuits only $3.95

Don't let the low price mislead you. As the world's number one manufacturer of double-balanced mixers, Mini-Circuits has accumulated extensive experience in high-volume production and testing, a key factor in achieving a successful low cost/high performance line of products.

The tough SBL-1 covers the broad frequency range of 1-500 MHz with 6 dB conversion loss and isolation greater than 40 dB. The SBL-1X covers 10-1000 MHz. Only well-matched, hot-carrier diodes and ruggedly constructed transmission-line transformers are used. Internally, every component is bonded to the header for excellent protection against shock, vibration and acceleration.

Here are some of the steps taken to ensure quality: Every SBL is RF tested two times, every solder connection is 100 per cent inspected under a high power microscope, all transformer leads are double-wrapped, and all components are rated for more than +100° C operation.

Of course, our one-year guarantee applies to these units.

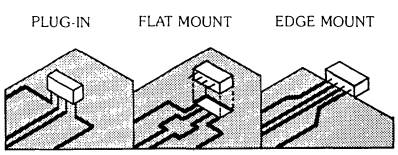
the world's smallest hermetically-sealed mixers
40 KHz to 3 GHz, MIL-M-28837 performance*
The TFM Series from Mini-Circuits from $11.95

Increase your packaging density, and lower your costs... specify Mini-Circuits miniature TFM Series. These tiny units 0.5" x 0.21" x 0.25" are the smallest, off-the-shelf Double Balanced Mixers available today.

Requiring less PC board area than a flat-pack or TO-5 case, the TFM Series offer greater than 45 dB isolation, and only 6 dB conversion loss.

Manufactured to meet the requirements of MIL-M-28837*, the tiny but rugged TFM units have become the preferred unit in new designs for military equipment.



E-Z Mounting for circuit layouts
Use the TFM series to solve your tight space problems. Take advantage of the mounting versatility—plug it upright on a PC board or mount it sideways as a flatpack.

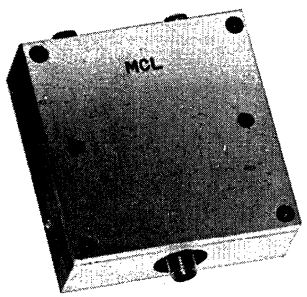
Microwave Mixers

Standard Level (+7 dBm LO)



MODEL	FREQUENCY	Z (Ohms)	COST
ZAM-42	1500 MHz - 4.2 GHz	50	$74.95 (1-9)
ZAM-4212	2000 MHz - 4.2 GHz	50	$79.95 (1-9)

DESCRIPTION—This series is housed in an extremely rugged package, and is designed to withstand extreme environmental and outdoor weather conditions.

Offered with SMA connectors, the size of these units are 2 inches square by 0.75" high.

Designed for use in satellite communication systems, the ZAM series has optimum performance over the frequency range of 3.7 to 4.2 GHz. Isolation is greater than 20 dB, conversion loss is typically 7 dB, and an LO power level of only +4 dBm to +7 dBm is required.

Utilizing a new microstrip design the ZAM series is offered at ⅓ to ½ the price of competitive units. The ZAM units are available for off-the-shelf delivery.

The breakthrough in price/performance is a natural extension of our extensive experience in high-volume manufacturing, exacting quality-control and computer testing. This expertise assures you highly reliable mixers with guaranteed repeatability of performance at lowest cost.

FEATURES

- **Broadband:** 1.5 GHz to 4.2 GHz
- **IF Output:** DC to 500 MHz
- **Low Conversion Loss:** typically 7 dB
- **Isolation:** typically 25 dB
- **Rugged Construction:** microstrip circuit in a milled aluminum structure
- **Low Profile:** only 0.75" high
- **High Reliability:** 100% tested, 1 year guarantee
- **Low Cost:** only $74.95 in small quantity

APPLICATIONS

- Satellite communications
- Frequency mixing
- Pulse and amplitude modulation
- Phase detection
- Current controlled attenuation
- Bi-phase modulation

ABSOLUTE MAXIMUM RATINGS

- **Input Power:** 50 mW
- **Operating and Storage Temp.** −55°C to +100°C
- **Peak IF Input Current:** 20 mA
- **Environmental Specifications:** See page 1

super mixer

the world's first 10-3000 MHz mixer **with only 6.5 dB conversion loss**

The ZFM-15 from Mini-Circuits $79.95 (1-9)

Specify the ZFM-15 for such applications as wideband ECM receivers where wide dynamic range is essential; the 1 dB compression point for the ZFM-15 is +5 dBm. The price/performance of the ZFM-15 even makes it ideal for narrowband applications including TACAN and S-Band telemetry.

The miniature ZFM-15 is available in 4 connector versions and 3 mounting configurations. Of course, super mixers come with Mini-Circuits' one-year guarantee and are available for immediate delivery.

TYPICAL PERFORMANCE CURVES

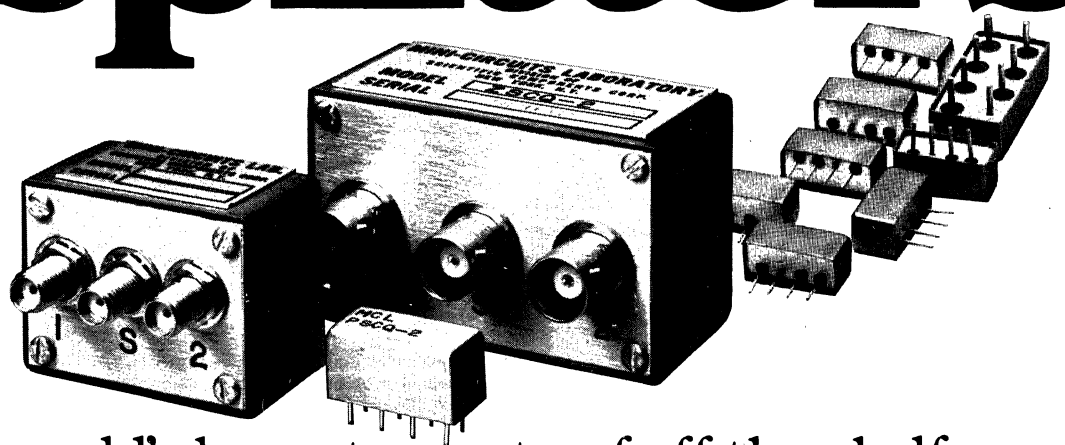
all models available for immediate delivery.

90° power splitters



the world's largest variety of off-the-shelf models

1.5-450 MHz 3°phase unbalance

The 90° Series from Mini-Circuits from $12.95

Choose from more than 20 models of 2-way, 90° power splitters, spanning 1.4–450 MHz, with typically better than 25 dB isolation and insertion loss less than 0.3 dB. Models are available in hermetically-sealed pin packages as well as connector versions.

Of course, if you need a "special" for a specific application, contact us for a prompt, informative response. We can supply your needs...at regular catalog prices!

For complete specs, performance curves and application information, refer to 1980–1981 MicroWaves Product Data Directory (pgs. 179–216) or EEM (pgs. 2923–3142).

power dividers

0.5 to 4.2 GHz, to 10W (matched output) 2, 3, 4, and 8 way models...from $39.95 (1-9)

Now...a wide variety of microstrip power-dividers at 1/3 to 1/2 the price of competitive units, with immediate delivery.

These rugged RFI-shielded units meet MIL-202 E standards and are available with BNC, TNC, SMA and Type N connectors. They are also useful as power combiners at signal levels up to +100 mW.

For complete specifications and performance curves refer to the Microwaves Product Data Directory, the Goldbook, EEM or EBG. Contact our sales offices for complete catalog.

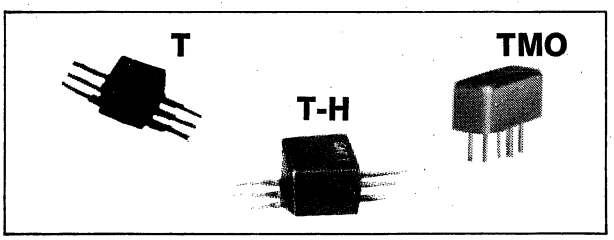
C 81-3 REV. B

Wideband (10 KHz to 800 MHz) RF TRANSFORMERS



DESCRIPTION — These microminiature wideband RF Transformers cover the frequency range from 10 KHz to 800 MHz. They operate with impedance levels from 12.5 ohms to 800 ohms and provide very low insertion loss, typically less than 0.5 dB.

These microminiature series are available in three basic configurations: (1) the primary and secondary windings are DC isolated (Fig. A), (2) primary and secondary windings are DC isolated and the secondary is center-tapped (Fig. B) and (3) the primary and secondary windings are unbalanced (i.e. they both have one end grounded) (Fig. C).

Although specified for a 50 ohm primary impedance they may be operated with a primary impedance as low as 12.5 ohms. The impedance matching ratio is essentially the same over this primary impedance range. However the frequency response may change somewhat.

T SERIES PLASTIC CASE

Very economically priced, the T-series units have a volume of less than 0.2 cu. inches. These tiny units have their adjacent pins spaced 0.1 inches; between rows the pin spacing is 0.3 inches. The T-series transformers can be inserted into a standard DIP socket.

TMO SERIES METAL CASE

The TMO units are hermetically sealed and require less PC area than a flat-pack or TO-5 can. Packaged within an EMI shielded metal enclosure (enclosure is 0.5 by 0.2 by 0.25 in.). Its pins are oriented on a 0.1 inch grid for printed circuit board mounting.

T-H SERIES

This new series allows high DC currents, up to 100 mA, to pass through the transformer primary without causing any appreciable saturation or change in its RF characteristics. Using this new technology, models are offered having impedance ratios of 1, 4, 9, and 16. Packaged in a plastic case, these models have their pins inserted into a standard DIP socket.

●T SERIES

FEATURES

- **Miniature Size:** 0.27″ Long, x 0.3″ Wide x 0.23″ High
- **Economically Priced:** From $2.95 in small quantity
- **Very Wide Bandwidth:** 10 KHz to 800 MHz

DESIGNERS KITS

TK-1: 2 transformers of each Type T1-1, T2-1, T4-1, T9-1, T16-1 **$32.00**

ABSOLUTE MAXIMUM RATINGS

- **Input Power:** 250 mW
- **Operating and Storage Temp.:** −20°C to +85°C
- **Pin Temperature:** (10 sec.) +260°C

●TMO SERIES

FEATURES

- **Hermetically Sealed**
- **High Reliability:** Manufactured to meet MIL STD 202E
- **Very Wide Bandwidth:** 10 KHz to 800 MHz

DESIGNERS KITS

TMK-2: 2 transformers of each Type TM01-1, TM02-1, TM04-1, TM09-1, TM016-1 **$49.50**

ABSOLUTE MAXIMUM RATINGS

- **Input Power:** 250 mW
- **Operating and Storage Temp.:** −55°C to +100°C
- **Pin Temperature:** (10 sec.) +260°C
- **Environmental Specifications:** See page 1

●T-H SERIES

FEATURES

- **Large Dynamic Range:** Up to 100 mA DC current
- **Miniature Size:** 0.27″ Long, x 0.3″ Wide, x 0.23″ High
- **Economically Priced:** From $4.95 in small quantity

DESIGNERS KITS

THK-1: 3 each of T1-1H, T4-1H, 2 each of T9-1H, T16-1H

ABSOLUTE MAXIMUM RATINGS

- **Maximum DC Current In Primary** 100 mA
- **Input Power:** 500 mW
- **Operating and Storage Temp.:** −20°C to +85°C
- **Pin Temperature:** (10 sec.) +260°C

Mini-Circuits

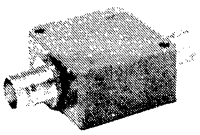
FT SERIES **FTB SERIES**



MODEL	FREQUENCY	INPUT Z (Ω)	COST
FT 1.5-1	0.1 MHz-400 MHz	50	$29.95 (1-4)
FTB 1-1	0.2 MHz-500 MHz	50	$29.95 (1-4)
FTB 1-6	0.01 MHz -200 MHz	50	$29.95 (1-4)
FTB 1-1-75	0.5 MHz - 500 MHz	75	$29.95 (1-4)

DESCRIPTION—These wideband RF transformers cover the frequency range from 10 KHz to 500 MHz. They operate with impedances of 50 ohms and 75 ohms. The FTB models offer a balanced input and an unbalanced output. This feature helps to eliminate ground loop problems, especially when long cable lines are utilized. The FT 1.5-1 is especially useful when matching between 50 and 75 ohm systems is required.

These units provide low insertion loss, and are manufactured in an extremely rugged 1¼ inch square metal case. Utilizing technology developed over a 10 year span, these transformers offer exceptional unit-to-unit matched performance.

BNC female connectors are standard. The unbalanced side is available with a male BNC or Type N connector. This option is available at a cost of $2 per unit.

The case finish is nickel plate over a copper flash. Internally, the transformers are bonded with silicone rubber to provide protection against shock, vibration, and acceleration.

Three case mounting configurations are available; (1) standard - 2 thru holes, (2) option A - 2 tapped holes, 4-40, (3) option B - a flange bracket.

FEATURES

- **Broadband:** 10 KHz to 500 MHz
- **Compact Size:** 1¼ in. square by 0.75 in. high
- **Balanced/Unbalanced Ports:** High isolation between balanced output to case.
- **Connectors:** Available with female BNC and male BNC or Type N.
- **High Reliability:** 100% tested, one year guarantee
- **Low Cost**: as little as $29.95 in small quantity.

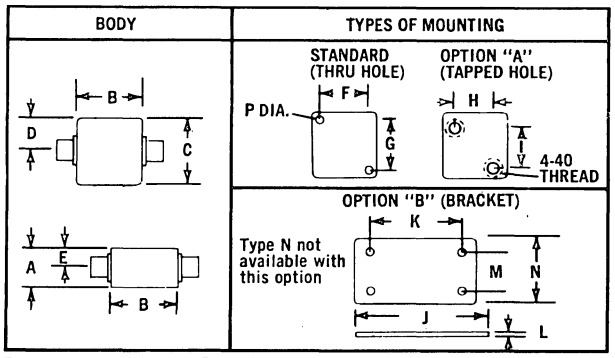
APPLICATIONS

- **Isolate ground loops in systems.**
- **Match 50 ohm to 75 ohm port connections.**
- **DC isolate high voltage common ground.**

ABSOLUTE MAXIMUM RATINGS

- **Input Power:** 250 mW
- **Operating and Storage Temp.:** −55° C to +100° C

DIMENSIONS AND CONNECTIONS



For mounting option A or B add Letter to P/N
BNC female (STD). On unbalanced side for male BNC or N please specify and add $2 to unit cost.

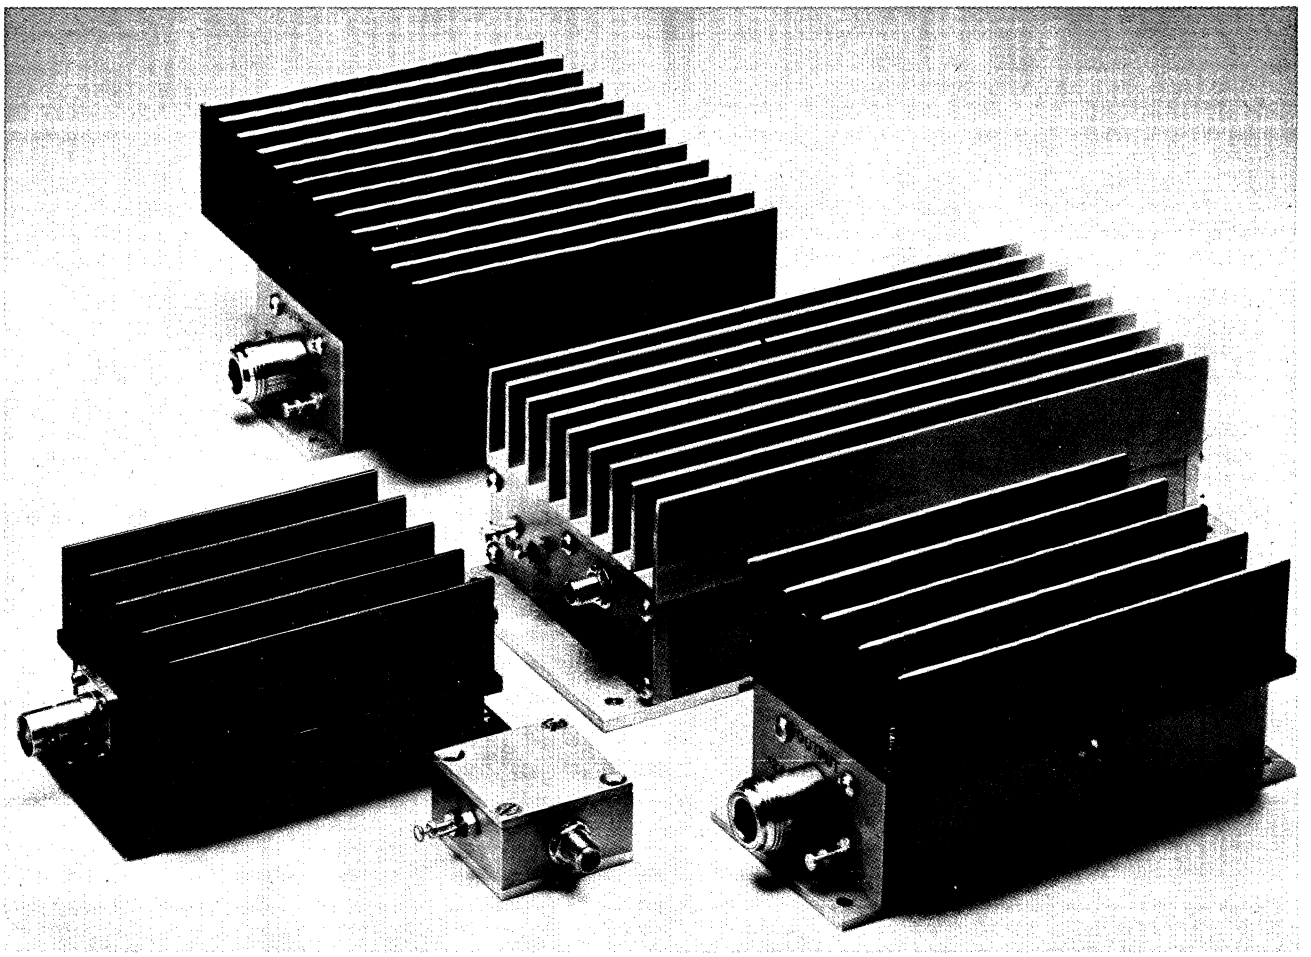
broadband linear

Power Amplifiers

up to 2 Watts (+33 dBm)

50 KHz to 4.2 GHz



Up to 1 watt linear output at 4.2 GHz, 2 watts at 800 MHz are now available at exceptionally low prices with Mini-Circuits' line of broadband amplifiers. Ultra-linear Class A design provides unconditional stability so any load impedance may be connected without concern for damage or oscilation. These amplifiers are ideally suited for TACAN, mobile radio, telemetry, anti-collision and satellite communications systems. Use these amplifiers to boost signal/sweep generator output to achieve broadband isolation, and to provide four test setups, using only one generator with a 4-way splitter...to name just a few applications.

phase detectors

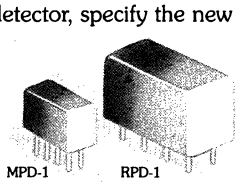
the world's highest performance
1000 mV output, 1 mV DC offset... only +7 dBm input
from $15.95

These new high efficiency phase detectors are the only units in the world offering a figure-of-merit greater than 125 for only $15.95.

The figure-of-merit M or efficiency of a phase detector can be defined as the ratio of maximum DC output voltage (in mV) divided by the RF power (in dBm). The maximum DC output from these units is 1000 mV with +7 dBm applied to the LO and RF ports, and DC offset is typically 400 micro-volts. Thus, its figure-of-merit M is 143, which indicates a highly efficient phase detector. For comparison, a double-balanced mixer used as a phase detector offers 350 mV DC output with the same LO and RF inputs for a figure-of-merit M of 50.

Both the RPD-1 and MPD-1 are packaged in a hermetically-sealed EMI-shielded metal case. The miniature RPD-1 measures 0.4 x 0.8 x 0.4 in. and the micromin MPD-1 is only 0.2 x 0.5 x 0.25 in.

So when your system requires a high output phase detector, specify the new RPD or MPD series.



RPD-1, MPD-1 SPECIFICATIONS

FREQUENCY RANGE:	
L and R ports	1-100 MHz
Output ports	DC-50 MHz
SCALE FACTOR	8 mV/Degree
IMPEDANCE	
L and R ports	50 ohms
I port	500 ohms
L and R SIGNAL LEVELS	+7 dBm
ISOLATION, L-R	40 dB min
MAXIMUM DC OUTPUT, mV	1000 mV typ 750 mV min
DC OUTPUT POLARITY (L and R in-phase)	Negative
DC OUTPUT OFFSET	0.2 mV typ 1 mV max
FIGURE-OF-MERIT, M	143 Typical

	SIZE	PRICE

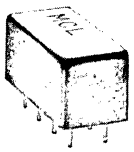
Phase Detectors

High-Figure-Of-Merit



RPD SERIES

MODEL	FREQUENCY	Z (Ohms)	COST
RPD-1	1-100 MHz	50	$15.95(5-24)

DESCRIPTION — These new high efficiency phase detectors offer state-of-the-art performance while still economically priced. These are the only units in the world offering a figure-of-merit greater than 125—at only $15.95.

The figure-of-merit M or efficiency of a phase detector can be defined as the ratio of maximum DC output voltage (in mV) divided by the RF power (in dBm). The maximum DC output of the RPD-1 is 1000 mV with +7 dBm applied to the LO and RF ports. Thus, its figure-of-merit M is 143, which represents a highly efficient phase detector. For comparison, a standard phase detector offers 350 mV DC output with the same LO and RF inputs for a figure-of-merit M of 50.

Only 0.40 inches high, the low profile RPD series of phase detectors covers a very broad frequency range from 1 to 100 MHz. Exhibiting a flat frequency response, these units are designed to operate with a 50 ohm impedance at the L & R ports, and 500 ohms at the I port. Output is 1000 mV (typ) and isolation is greater than 50 dB (typ).

Packaged within an RFI shielded metal enclosure and hermetically sealed header, these high performance units have their 8 pins located on a 0.2 inch grid.

High reliability is a characteristic of the RPD series. Each unit carries a one-year guarantee by Mini-Circuits.

DIMENSIONS AND CONNECTIONS

	A	B	C	D	E	F
IN.	.770	.800	.385	.400	.370	.400

Case Ground	2

NOTE: PINS 3 AND 4 MUST BE CONNECTED TOGETHER

WEIGHT 5.2 grams .18 ounces

FEATURES

Broadband, 1-100 MHz
High Output, 1000 mV
High Figure-Of-Merit, M, 143 typical
High Isolation, typically greater than 50 dB
Low DC Offset, 0.2 mV typical
Miniature, 0.128 in. cu., 0.4 in x 0.8 PC area, 0.4 in. high
High Reliability, 100% tested
Low Cost, $15.95 (5-24)

APPLICATIONS

- Radar
- ECM Systems
- Test instruments
- Phase-lock loops

ABSOLUTE MAXIMUM RATINGS

- **Input Power:** 50 mW
- **Peak IF Input Current:** 40 mA
- **Operating and Storage Temp.:** —55°C to +100°C
- **Pin Temperature:** (10 sec.) +260°C

RPD-1 SPECIFICATIONS

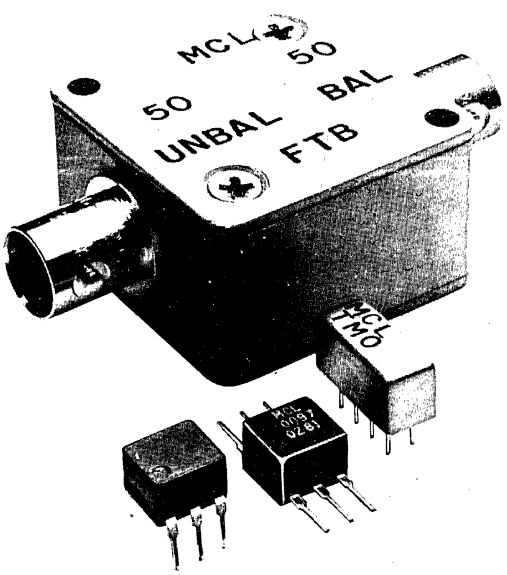
the world's widest selection of matching ratios
10KHz-800MHz...balanced, DC isolated, center-tapped
46 off-the-shelf models from Mini-Circuits from $2.95



Bent Lead version, please specify

Select from the economical, microminiature T-series (plastic case) or TMO series (hermetically-sealed metal case) covering 10 KHz to 800 MHz. These models operate from 12.5 to 800 ohms with insertion loss typically less than 0.5 dB.

For large dynamic range applications, specify the T-H series which can handle up to 100 mA primary current without saturation or distortion.

Need a connector version? Select from the FT or FTB series, available with unbalanced or balanced outputs. Connector choices are female (BNC, Isolated BNC, and Type N) and male (BNC and Type N). These units operate from 10 KHz to 500 MHz with impedances of 50 and 75 ohms.

Of course, Mini-Circuits' one-year guarantee is included.

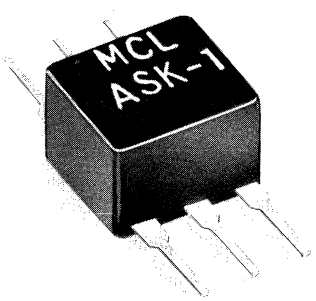
The ASK-1 from Mini-Circuits 5^{95} (10-49)

CAPD now available! computer-automated performance data



Mini-circuits
Model ASK-1/Plastic Case

Until now, the smallest mixer flatpack available was 0.510 by 0.385 inches or 0.196 sq. inches.

Now, Mini-Circuits introduces the ultra-compact ASK series, measuring only 0.300 by 0.270 inches or 0.081 sq. inches, more than doubling packaging density on a PC board layout.

Utilizing high production techniques developed by Mini-Circuits, the world's largest manufacturer of double-balanced mixers, the ASK-1 is offered at the surprisingly low price of only $5.95 (in 10 quantity).

Production quantities are available now for immediate delivery. And, of course, each unit is manufactured under the high quality standards of Mini-Circuits and is covered by a one-year guarantee.

WIDEBAND POWER DIVIDERS/COMBINERS, HYBRID TRANSFORMERS, & TERMINATIONS

North Hills

POWER DIVIDERS/COMBINERS

0.2 - 110 and 30 - 225 MHz
2, 4, and 8-way
50 and 75 ohms

Series 01 and 10 Power Dividers are designed for low power applications in the 0.2 to 110 and 30 to 225 MHz frequency ranges.
Hybrid Junction Techniques are employed to assure superior isolation and minimal insertion loss. VSWR is optimized at all ports.
50 and 75 ohm impedances are standard. Other impedances available on special order.

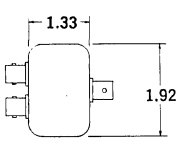
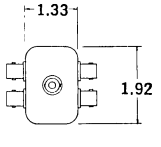
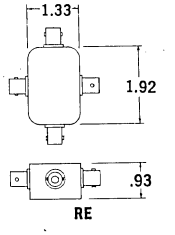
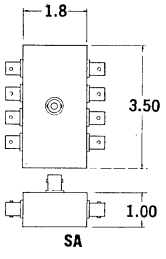
CASE STYLES









BNC Connectors are standard. Other connectors available on special order. Stud mounting standard.

Different case styles, including printed circuit types with solder terminals, available on special order.

SPECIAL UNITS — 10 Hz to 1 GHz

In addition to our standard lines, North Hills custom designs to specific requirements. Examples of these include:

- Active unity – or high-gain power splitters, adders and combiners.
- High power dividers.
- Resistive dividers from dc to 500 MHz
- Power dividers for video applications with response down to 1 kHz.
- Non-standard impedances.

WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

Microwave Filters and RF Attenuators

TUBULAR LOWPASS FILTERS

Cutoff frequency range: 30 to 2,750 MHz. Available with 2 thru 12 sections and virtually any RF connector.

SERIES TLP
100 to 2,750 MHz
½" diam.
low cost
small size

SERIES TLA
50 to 1,500 MHz

8148	0-11	0.1	500 MHz	50	1.3:1 max.	

Since 1960, Telonic has been a leading name in precision electronic components. Telonic's approach is to offer an *exceptionally wide* choice of standard filter types that can be delivered promptly—and which meet your specification requirements. Electrical test design data accompanies each order on request—and is your guarantee of quality assurance.

In the early 1960's when Telonic needed a precision step attenuator for one of their newly designed sweep generators, they had to revert to the ultimate supplier—themselves—to get the performance and dependability the instrument engineer demanded. Today, the product line has expanded into a complete series of rotary step, toggle, fixed, programmable, and custom units.

■ Technical assistance ■ Custom designs ■ Competitive prices ■ Outstanding product quality—backed by full warranty ■ Prompt delivery of stock items.

Call toll free for specs, prices and delivery on standard or special orders.

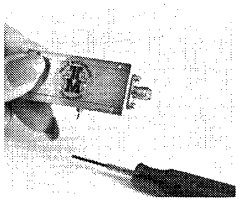
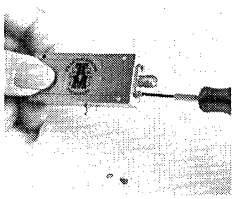
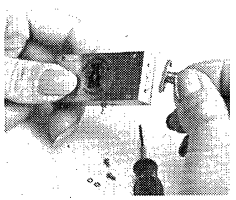
*Refer to photographs on top of next page.



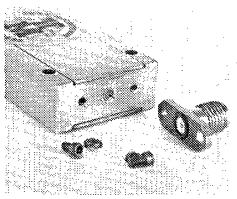
Amplifier is shipped with connector in place to simplify testing.



After test, screws are removed.



Connector is removed. Unit remains hermetically sealed. TRAK PAK™ impedance remains 50 ohms.



Amplifier is ready to drop into microstrip circuit.

TRAK MICROWAVE CORPORATION

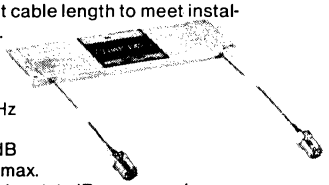
GaAs FET AMPLIFIERS

CUSTOM DESIGN

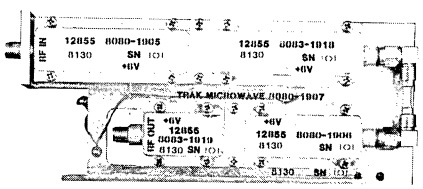
TRAK manufactures custom designs tailored to specific requirements. A few examples are depicted below.

ULTRA-THIN

Special thin package design which features semi-rigid coax cables at the input and output. Units are tested with SMA connectors attached as shown. User may cut cable length to meet installation requirements.



Frequency: 2 - 6 GHz
Gain: 28 dB min.
Gain Flatness: +2 dB
Noise Figure: 6 dB max.
Output: +18 dBm min. at 1 dB compression.
Temp. Range: -30 to +71°C
VSWR: 2:1
Phase Matching: ±30° at 25°C
Gain Matching: ±1 dB at 25°C
Supply: +15V at 160 mA
Size: 3.6" x 1.0" x 0.15"

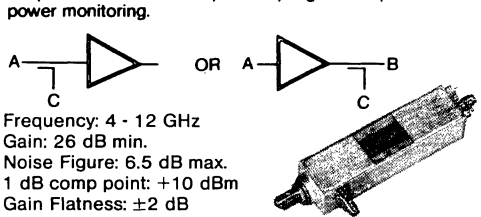


IFM AMPLIFIER

Frequency: 6 - 12 GHz
Gain: 60 dB typical
Gain Flatness: ±1 dB
Power: +13±1 dBm, at 1 dB compression.
Temp. Range: -54 to 85°C
Supply: +6VDC @ 400 mA, typical

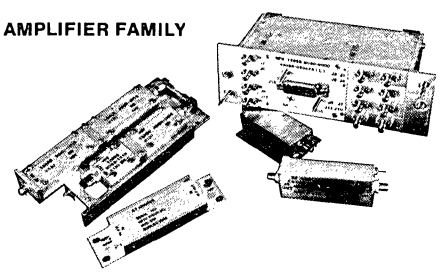
AMPLIFIER/COUPLER

Broadband amplifiers which contain microstrip coupler for additional input coupling or output power monitoring.



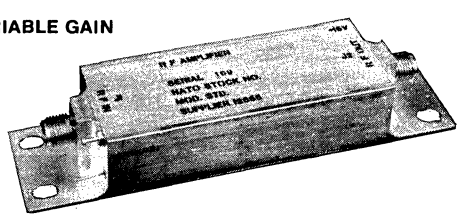
Frequency: 4 - 12 GHz
Gain: 26 dB min.
Noise Figure: 6.5 dB max.
1 dB comp point: +10 dBm
Gain Flatness: ±2 dB
Coupler: input or output coupler; customer specified value
VSWR: 2.0:1
Temp: -30 to +71°C

AMPLIFIER FAMILY



- Broadband - Low noise amplifiers in 2 - 18 GHz frequency range
- Custom designed packages to customer specifications
- Temperature compensation available
- Phase matching capability
- Input, output couplers, or bite test functions available
- SMA connectors
- Drop-in configurations
- 1 watt power amplifiers

VARIABLE GAIN



Frequency: 2 - 6 GHz
Gain: 20-30 dB typical
TTL Gain Control: 20 dB typical
VSWR: 2:1
Temp. Range: -54 to +115°C

FET Amplifiers Also Available:

- **Temperature Compensated Wideband Coaxial**
- **Non-Temperature Compensated Wideband Coaxial and Drop-Ins**
- **Non-Temperature Compensated Narrowband Coaxial and Drop-Ins**
- **Customized-Designs to Your Specifications**

TRAK MICROWAVE CORPORATION

OSCILLATORS, COMB GENERATORS, IF AMPLIFIERS AND POWER AMPLIFIERS

12 - 18 GHz GaAs FET Dielectrically Stabilized Oscillators (DSO's)

ELECTRICAL SPECIFICATIONS

Frequency:	Factory set between 8 and 18 GHz
Frequency Set Accuracy:	±1 MHz
Power Output:	+12 dBm minimum
Inband Spurious:	None
Stability:	
Frequency vs temperature	5ppm/°C maximum
Frequency pulling:	1 MHz peak to peak into 3:1 load VSWR
Frequency pushing:	2 KHz/volt, typical
Power vs temperature:	±1 dB
Power Supply:	+15 VDC @ 70 mA, nominal

ENVIRONMENTAL SPECIFICATIONS

Operating Temperature Range:	-54 to +115°C
Storage Temperature:	-54 to +125°C
Shock:	100g, 11ms
Vibration:	20g, 20-2000cps

MECHANICAL SPECIFICATIONS

Size:	2.28 x 1.0 x 1.0 inches (60 x 25.5 x 25.5 mm) nominal, excluding projections
Weight:	100 grams, nominal
RF connector:	SMA Female
DC connections:	Solder Terminal

Options: The following components can be added to tailor the oscillator to meet specific system requirements and to obtain the optimum cost-performance tradeoff.

- PIN switch for dual frequency mode.
- Amplifier stages for increased output power.
- RF coupler for RF power monitoring or other functions.
- Power dividers for driving multiple mixers.
- PIN attenuator for external amplitude modulation.
- Varactors for external frequency modulation.
- Heater for increased frequency stability.

In addition to adding other functions, TRAK can provide special models to provide minimal FM under 50g operating vibration. Models with mechanical tuning capability are also available.

DIELECTRICALLY STABILIZED OSCILLATORS (DSO's)

Model Number	Frequency Range (GHz)	Output Power (mw Minimum)	Second Harmonic (dBc min.)	(Ounces Nominal)	Size, inches Nominal,
6600-1300	3.65 - 4.05	30	30	3.0	2.7 x 1.7 x 1
6600-1610	4.25 - 4.75	30	30	2.5	2.5 x 1.5 x .9

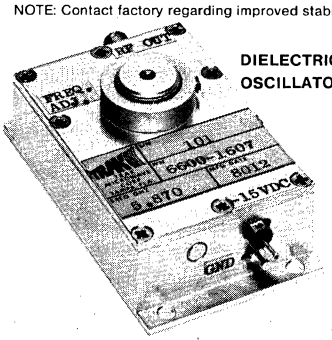
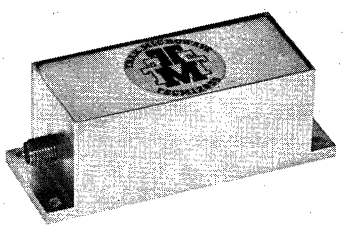
Power Supply: -15 VDC @ 30 mA nom.
Frequency Stability: 10ppm/ C max. 5 ppm/ C, typical
Temperature Range: -54 to +95 C

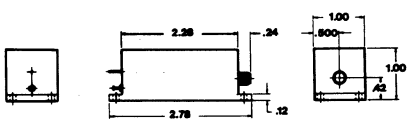
NOTE: Contact factory regarding improved stability requirements.



DIELECTRICALLY STABILIZED OSCILLATORS (DSO's)

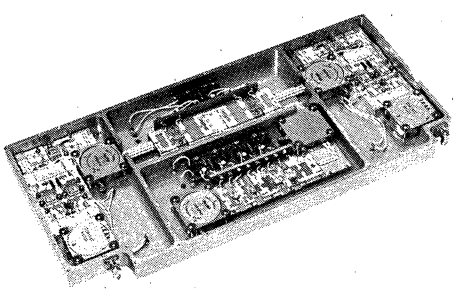


6700 Series



TACAN BAND DUAL CHANNEL POWER AMPLIFIER

Frequency Range: 960 - 1215 MHz
Power Output: 165 watts peak per channel
Gain: 42 dB
Duty Factor: 20%
Bandwidth: 255 MHz



TACAN BAND DUAL CHANNEL POWER AMPLIFIER

Also Available:

- **Other Oscillators-Cavity Stabilized, Crystal-Controlled, Pulsed-Up To Ka Band**
- **Frequency Multipliers**
- **Microwave Subsystems and Receivers**
- **YIG Components**
- **Custom Designs**

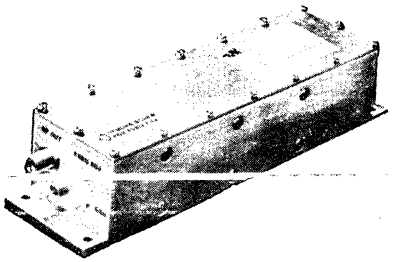
TRAK MICROWAVE CORPORATION

OSCILLATORS, COMB GENERATORS, IF AMPLIFIERS AND POWER AMPLIFIERS

OVENIZED Ku BAND CRYSTAL CONTROLLED OSCILLATORS

Frequency:	12, 13, or 14 GHz
Power Output:	+10 dBm minimum
Frequency Stability:	±5 ppm (-20 C to +71 C)
Frequency Set Accuracy:	±2 ppm (at +25 C)
Harmonics and Spurs:	>40 dBc
Load VSWR:	1.5:1 maximum
Power Supply:	+15 V @ 430 mA steady state (800 mA max. at turn-on)
Warm-up Time to meet 5 ppm frequency stability:	120 sec. max.
Size:	5 x 1.5 x 1.25 inches nominal, excluding projections
Temperature Range:	-55 to +85 C

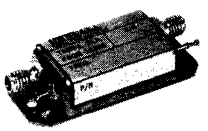


OVENIZED KU BAND CRYSTAL CONTROLLED OSCILLATORS

WIDE DYNAMIC RANGE LOW NOISE IF AMPLIFIER
Model 8400-1080

Center Frequency:	Customer specified 20 to 150 MHz
3 dB Bandwidth:	10 MHz, nominal
Bandpass Ripple:	1 dB, typical
Skirt Selectivity:	12 dB/octave, typical
Gain:	70 ± 3 dB
Noise Figure:	3 dB max.
Input Impedance:	50 ohms nominal
1 dB Compression Point:	0 dBm min.
3rd Order Intercept Point:	+10 dBm nominal
Input Dynamic Range (with AGC):	80 dB min.
AGC Range:	60 dB min.
AGC Voltage:	0 to + 5 volts
Size:	1.28 x .71 x 0.5 inches, nominal excluding projections
Temperature Range:	0 to +50°C (see note)

NOTE: Temperature compensation circuits are optionally available for higher stability and/or wider temperature ranges.



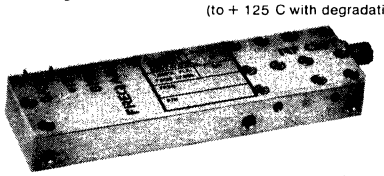
WIDE DYNAMIC RANGE LOW NOISE IF AMPLIFIER

2.5 - 18 GHz MINIATURE CRYSTAL CONTROLLED OSCILLATORS

ELECTRICAL PARAMETERS (general)
Frequency set accuracy at room temperature: ±0.001%
Frequency stability: ±0.003%
Aging rate: ±0.005% per year
Power variation with temperature: ±2 dB
Power supply: +15 VDC (other voltages optional)

MODEL NUMBER	FREQUENCY (GHz)	POWER OUTPUT AT +25 C (dBm min.)	OUTPUT HARMONICS AND SPURIOUS (dBc)	CURRENT (mA nom.)
5044-1311	2.5 - 4.0	+10	>40	100
5044-1611	4.0 - 8.0	+10	>40	110
5045-1911	8.0 - 10.0	+10	>40	120
5045-1913	10.0 - 12.0	+10	>40	140
5045-1240	12.0 - 18.0	+10	>40	150

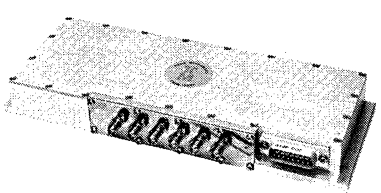
CONTACT FACTORY FOR OTHER FREQUENCIES AND/OR POWER LEVELS
Temperature Range: -55 to +85 C (to + 125 C with degradation)



2.5-18 GHz MINIATURE CRYSTAL CONTROLLED OSCILLATORS

CUSTOM DESIGNED SWITCHED MULTIPLE OUTPUT OSCILLATOR

This custom designed unit provides several electronically selectable output frequencies. Output signals can be in various bands and with various power levels. Thin-film hybrid techniques minimize size. Contact TRAK with your needs.



COMB GENERATORS

Model Number	3900-1210	3900-1900	3900-1203	3900-1200

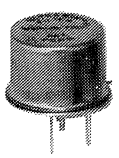
WAVETEK® P.O. Box 190, Beech Grove, IN 46107. Phone (317) 787-3332

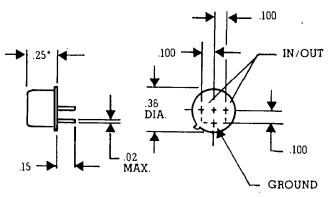
Ultramin® Series RF and Microwave Filters

- Filters in TO-5 size packages are only 0.36 inches in diameter and weigh less than 0.046 oz.
- Standard Models cover 10 to 1000 MHz frequency range. 1000 to 2000 MHz frequency range available on special order.
- Bandpass, lowpass, highpass, and bandstop filters are available.
- Models are available that meet MIL-E-5400R, MIL-STD-202E, MIL-E-8189H, MIL-F-18327D and MIL-STD-883A. A glass-to-hermetic seal is standard with most configurations.

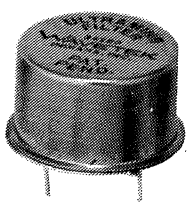
T5



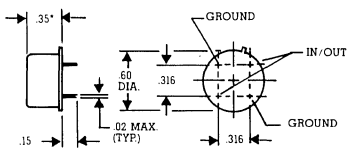
Frequency Range: 25 to 500 MHz.
Filter Sections: 3, bandpass; 3 to 4, lowpass.
Package: TO-5 metal case. Glass/metal hermetic seal.
Connectors: Pin.
*Standard height; shorter package available on request.



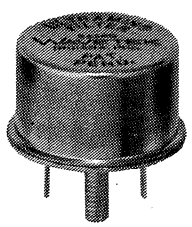
T8



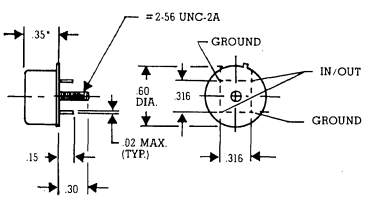
Frequency Range: 10 to 1000 MHz.
Filter Sections: 3 to 6, bandpass; 3 to 6, lowpass.
Package: TO-8 metal case. Glass/metal hermetic seal.
Connectors: Pin.
*Standard heights are 0.250, 0.300 and 0.350 inches.



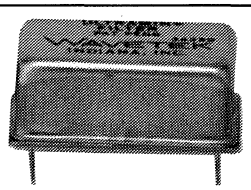
T8S



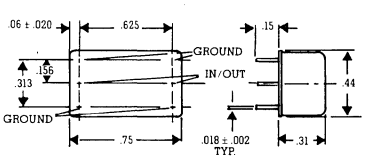
Frequency Range: 10 to 1000 MHz.
Filter Sections: 3 to 5, bandpass; 3 to 6, lowpass.
Package: TO-8 metal case. #2-56 threaded mounting stud and glass/metal hermetic seal. Recommended above 100 MHz for improved grounding.
Connectors: Pin.



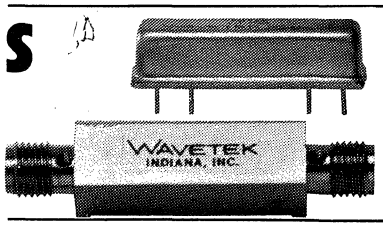
R



Frequency Range: 10 to 1500 MHz.
Filter Sections: 3 to 8, bandpass; 3 to 10; lowpass.
Package: Rectangular metal case. Glass/metal hermetic seal is optional.
Connectors: Pin or coaxial.



S



Frequency Range: 10 to 2000 MHz.
Filter Sections: 3 to 10, bandpass; 3 to 12, lowpass.
Package: Rectangular metal case. Glass/metal hermetic seal.
Connectors: Pin or coaxial.

	Average Power	VSWR	Impedance	3 dB Percentage Bandwidths	Shock	Vibration	Temperature	Humidity
Standard	1 W	Less than 1.5:1	50Ω	5% to 100%	50 G's 11 ms	20 G's 0-500 Hz	0° to +50°C	100% (Pin Connectors)
Special Order	Consult Factory	Less than 1.2:1	Consult Factory	1% to 200%	200 G's 20 ms	50 G's 0-3000 Hz	−55° to +125°C	100% (All Connectors)

Note: All Ultramin® Series Filters are passive, bidirectional devices. Filter characteristics are the same for power flow in either direction. Specifications are subject to change without notice.

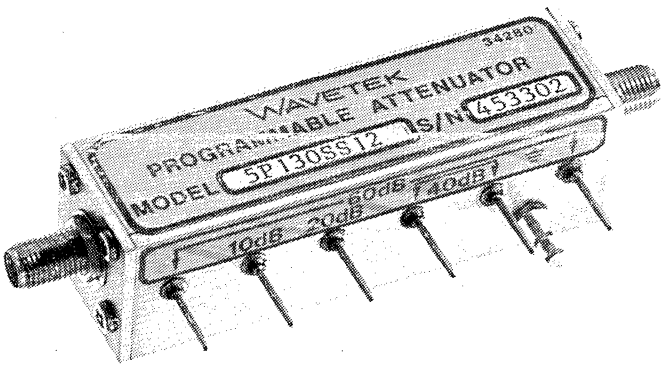
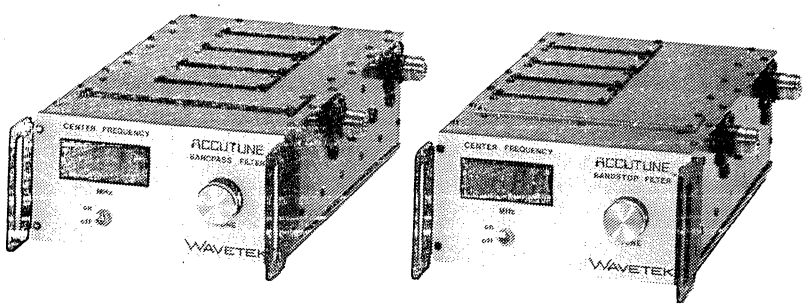
Programmable Attenuators



- World's Smallest Design
- Ideal for OEM Systems Applications
- High Volume Delivery
- Custom Design Capability
- Optional TTL Interface

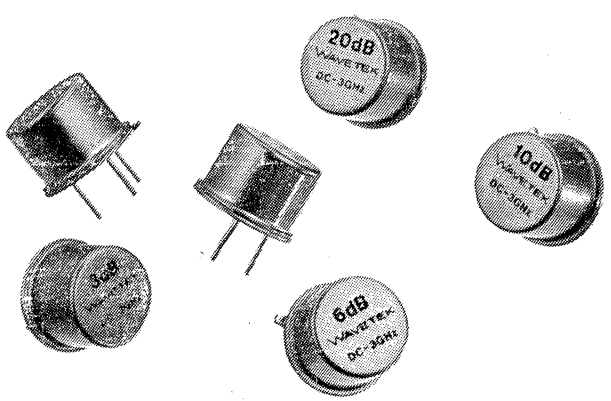
Model	Attenuation	Frequency
5P70	0 to 70 dB	DC to 2000 MHz
5P127	0 to 127 dB	DC to 1500 MHz
5P130	0 to 130 dB	DC to 1500 MHz

Series 5200 and 7200 Accutune™ Tunable Filters



- LDC Readout Accuracy of ±0.15%
- 2000 Discrete Calibration Frequencies Available
- 2.2 Typical Form Factor
- 30 to 2000 MHz
- 60 Watt Power Rating
- Custom Bandwidths and Tuning Ranges Available

Micropad Series MA5 Stripline/Microstrip Fixed Attenuators



- DC to 3 GHz
- ±0.2 dB Accuracy to 1 GHz
- 5 Standard Attenuation Values
- Ultraminiature Packaging
- Hermetically Sealed
- Custom Values Available

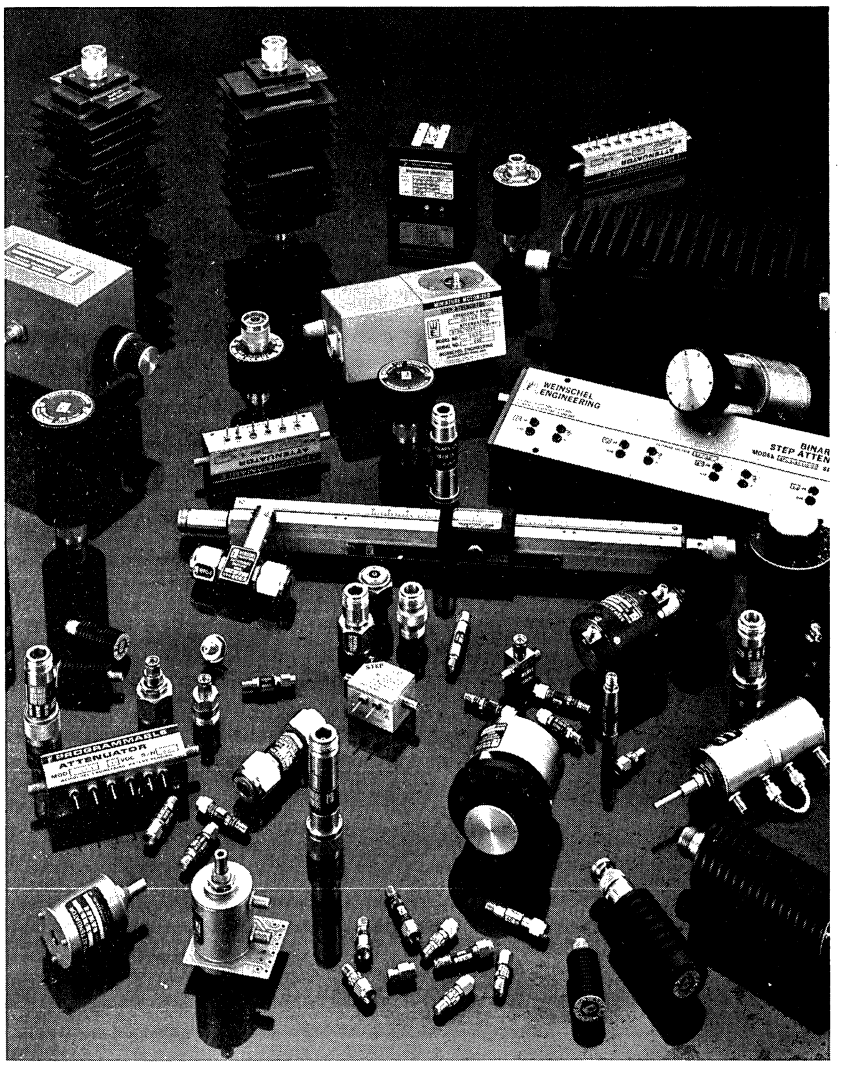
Weinschel RF components . . .

DC-40 GHz

Weinschel Engineering offers the industry's most comprehensive line of high quality microwave components. Covering the frequency spectrum from DC to 40 GHz, these components include fixed, continuously variable, and step attenuators as well as precision terminations, connectors, adapters and power dividers. Consistent performance and virtually flat attenuation versus frequency characteristics are well-known qualitites of Weinschel components. Power ratings from 1 watt to 250 watts are available.

Conservatively rated, Weinschel's high power attenuators handle at least 24% more power than specified. Due to innovative engineering and state-of-the-art manufacturing techniques, our high-power line is continually being improved and expanded. Not only do we offer a 250 watt attenuator but high power attenuators with broadband capabilities are also now available. For example, Weinschel's model 48, rated for 100 watts average, 1 KW peak, operates from DC to 18 GHz. Proprietary film processes produce resistive elements with features such as low temperature coefficients, low aging rates and immunity to overload. By eliminating the need for heat conducting liquids, size can be reduced while reliability is improved.

For more information about our component line contact your nearest Weinschel representative or call us toll free.



a long line of excellence.

EEM PRODUCT SELECTION GUIDES

Use the EEM Product Selection Guides. There are 33 Guides in this edition of EEM. See page 2 (1•2, 2•2, 3•2) of each volume to locate the Product Selection Guides that pertain to your needs.

Buy by the numbers. Buy #1

Today multilayer ceramic capacitors (MLC's) are being sold in greater numbers than ever before. In fact, they make up over 60% of all the capacitor units sold in the industry. And, out of all these, AVX Ceramics is the leading manufacturer worldwide.

Here's some other impressive numbers. Follow them to link up with AVX MLC chips (p 1•1014), SpinGuards (p 1•1011), DipGuard (p 1•1013), molded axials (p 1•1012) and SkyCaps (p 1•1010) listed in this catalog. For military radials and axials (p 1•1672) and for military DipGuards and chips (p 1•1673).

To locate the right MLC for your application, just follow the numbers. They'll lead you straight to number one.

eem qualified products lists selection guide

"Qualified Products Lists" are issued periodically by the U.S. Government as a guide for the procurement of electronic components by government contractors. Each list contains every separately designated part that has qualified under the lated Mil. Specification for its class and the name(s) of the Manufacturer(s) of each.

EEM is publishing the names of those companies that are qualified producers of one or more products in each of the lists that apply to a selected group of electronic products normally cataloged in these pages.

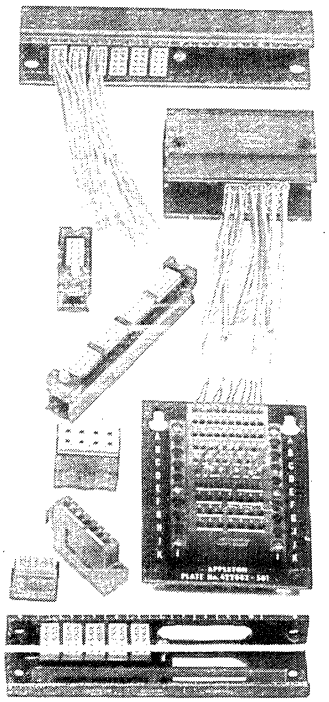
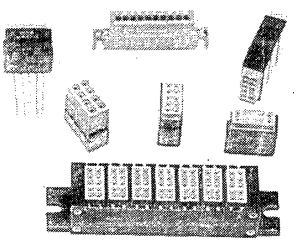
Make better connections with Appleton's wide line of 6106 type relay sockets... M81714 TJS modules... low-cost terminal blocks, plus specials.



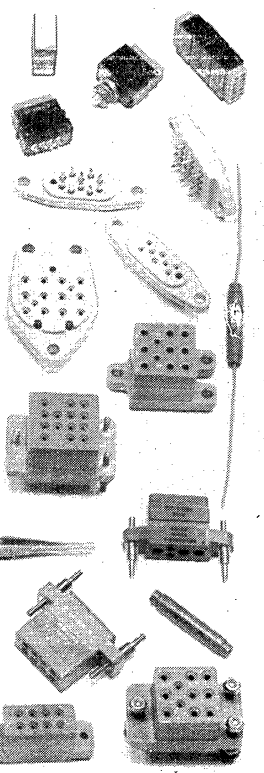
RELAY SOCKETS FOR MIL-R-6106 RELAYS—A wide range of sockets for your systems needs. Includes standard styles with fixed or removable closed entry socket contacts. Low profile designs, for top panel or bottom panel mounting, and designs for use with M39029/5 socket contacts.

MIL-R-6106 TRACK MOUNT—The track system allows the relay socket and relay to be locked into a mounted track, with significant reduction in size over a panel mounted relay system. Appleton manufactures the relay sockets and tracks as well as the insertion/removal tools.



MIL-T-81714 TERMINAL JUNCTION SYSTEM MODULES—QPL APPROVED—Pin contacts per MIL-C-39029. Feedback and feedthru styles in sizes 12, 16, 20 and 22, with a full selection of bussing arrangements. Exclusive total peripheral pin-to-socket surface contact and one-piece contact-bus design provides electrical continuity. Appleton supplies complete systems including mounting tracks and wire splices.

LOW-COST PROGRAMMING TERMINAL BLOCKS—Let our individual terminal blocks and plate mounted groups meet your needs for interconnection, bussing and signal distribution. Unique one-piece contact design provides an uninterrupted circuit through all bussed positions for consistent electrical performance. Feedback and feedthru designs are available, color-coded for AWG wire sizes 16 through 24.



CUSTOM DESIGNS—Appleton is interested in your special connector needs. Let us help you meet those needs. Call (414) 764-7200, or write, APPLETON ELECTRONICS, INC., 2205 12th Ave., South Milwaukee, WI 53172.

(In California call (805) 529-0276, or write, APPLETON ELECTRONICS, INC., P.O. Box 1025, Thousand Oaks, CA 91360.) 81212

All TRM products are designed to meet the applicable specifications of:
MIL-E-16400 Class 1
MIL-E- 5400 Class 3
MIL-C-15370
MIL-C-39012
and manufactured in accordance with:
MIL-I- 45208 and MIL-C-45662

EEM MINIGLOSSARY OPTO SEMICONDUCTORS

Avalanche Photodiode: A photodiode that takes advantage of avalanche multiplication of photocurrent. It is particularly suited to low noise and/or high speed applications.

Contrast: A noticeable difference in color, brightness, or other characteristics in a side-by-side comparison.

Chrominance Contrast: The color contrast between two adjacent surfaces of identical area, shape, texture, and luminance. The human eye is more sensitive to differences in color than it is to differences in brightness.

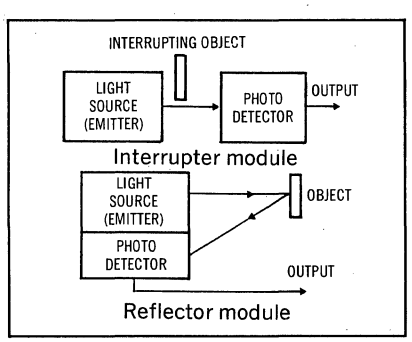
Current Transfer Ratio: The ratio of an optocoupler's output current to input current at a specified bias.

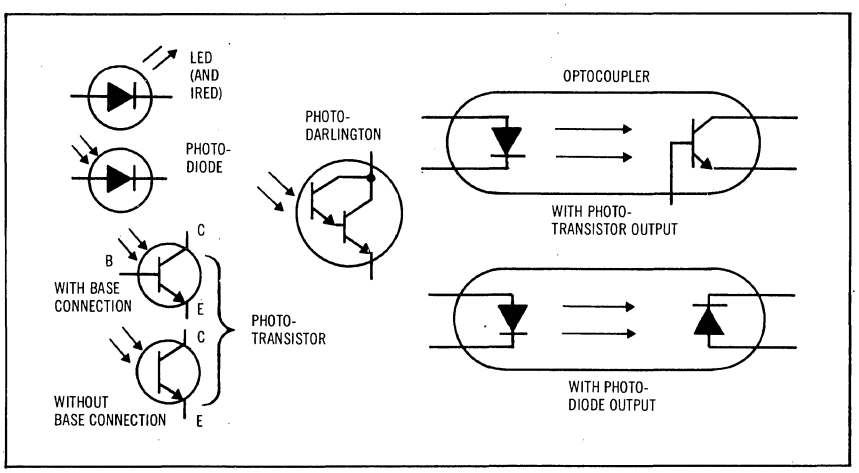
Dark Current: The leakage current of a photodetector with no incident light.

Dominant Wavelength: The wavelength that is a quantitative measure of apparent color of light as perceived by the human eye.

Infrared Radiation: The electromagnetic wavelength region between approximately 0.75 and 100 micrometers longer than the wavelength of visible light.

Interrupter (module): A device that produces an electrical output signal when an object breaks the light (visible or invisible) between a light source and a photodetector.





IRED: An infrared-emitting diode. See light-emitting diode.

Light Current: The current that flows through a photodetector when it is exposed to radiant energy.

Light-Emitting Diode (LED): A semiconductor diode that emits incoherent light at its PN junction when forward biased. The light can be in the visible or invisible (infrared) wavelength region.

Luminance Contrast: The observed brightness of a light-emitting element compared to the brightness of the "surround," an integral part of the device and inseparable from it.

Optocoupler: A device that transmits electrical signals, without electrical connection, between a light source (input) and the receiver (output). The input is generally an LED; the output might be a photodiode, phototransistor, a photo–Darlington, etc. Sometimes referred to as optoisolator.

Peak Wavelength: The wavelength at the peak of the radiated spectrum of an emitter.

Photo–Darlington: A light-sensitive Darlington-connected transistor pair. The photo–Darlington has a very high sensitivity to illumination or radiation.

Photodetector: A device that provides an electrical output signal when subjected to radiation in the visible, infrared, or ultraviolet regions of the electromagnetic spectrum. Photodiodes, phototransistors, and photo–Darlingtons are the most common type of photodetectors.

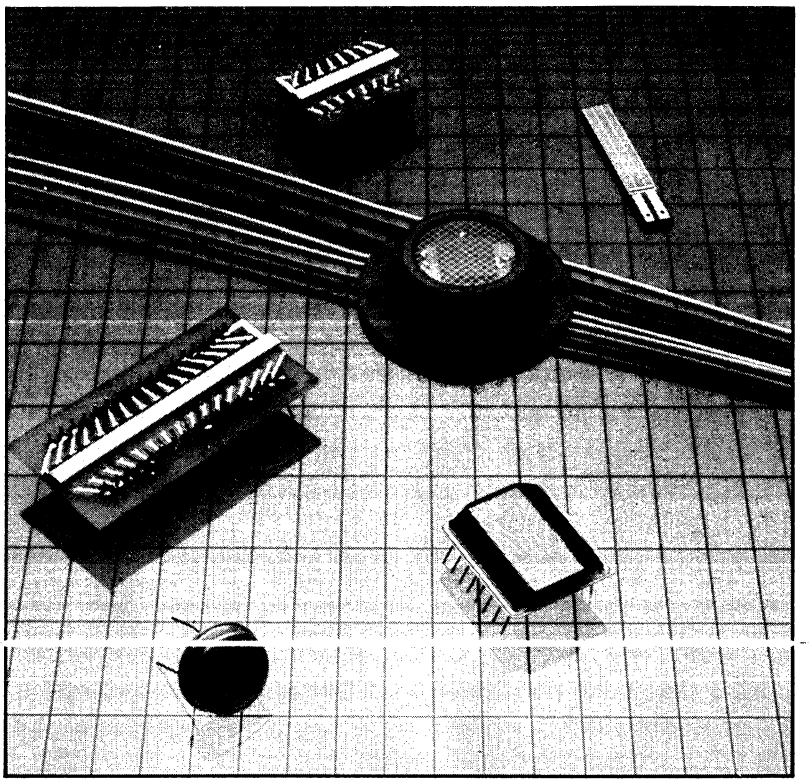
Photodiode: A junction diode that is responsive to radiant energy. Photodiodes have a high degree of linearity between the input radiation and the output current, and faster switching speeds than phototransistors.

Photothyristor: A thyristor whose switching action is controlled by light applied to the thyristor gate.

Phototransistor: A light-sensitive transister that delivers an electrical output proportional to the light intensity at its input. The low-level photocurrent that is generated is amplified by the current gain of the transistor. The base region (or gate in a FET) may or may not be brought out as an external terminal.

Point Source: A source with a maximum dimension less than one-tenth the distance between sources and detector.

Reflector (module): A device containing a light source and a photodetector that detects any object that reflects light produced by the source back to the detector.



PHOTOSENSOR DEVICES & ASSEMBLIES

The Photosensor Division of Applied Solar Energy Corporation is a leading manufacturer of high technology silicon photodiode detectors. Select from a variety of standard devices in stock or develop custom arrays including:

- High Speed Silicon Photodiodes
- Stable UV-Enhanced Photodiodes
- Custom Low Energy Detecting Arrays

and much more. Write for your FREE copy of the Photosensor Selector Guide. Photosensor Division, Applied Solar Energy Corporation, P.O. Box 1212, City of Industry, California 91749, (213) 968-6581, TWX 910-584-4890.

CENTRONIC Optoelectronic Devices

The Centronic line of optoelectronic components is one of the most complete — if not the most complete — in the industry today.

Whatever your requirements are . . . high performance or economy . . . single or multiple element . . . quadrant or dual . . LED's . . . photo interrupters . . . phototransistors . . . opto-couplers . . . solar cells . . . etc., you can depend on Centronic for performance-rated products, quick delivery and very competitive pricing.

Ask your local Centronic representative to quote your next requirement, or **CALL (201) 233-7200** and ask for an applications engineer.

SINGLE ELEMENT HIGH PERFORMANCE PHOTODIODES

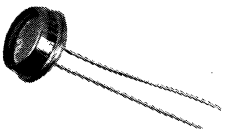
Clairex Photoconductive Cells



Part No.	Diam. X Length (inches)	Resistance @ 2 ftc ± 33-1/3%	Minimum resistance ratio from 2 ftc to Dark within 5 sec.	Maximum voltage	Power Dissipation @ 25°C (mw)
CL5M9M	.55 X .18	11K	1:1000	170	2000-500[1]
CL709L	.36 X .18	28K		100	125
CL909L	.21 X .15	100K		100	50

Type 9 CdS, peak spectral response 5500 angstroms combines high speed with extreme temperature stability and high linearity.

CL5M3	.55 X .18	7.2K	1:10,000	250	2000-500[1]
CL603	.25 X .5	133K		300	75
CL603A	.25 X .5	75K		300	75
CL603AL	.25 X .5	3.5K		170	75
CL703	.36 X .18	133K		300	125
CL703A	.36 X .18	67K		300	125
CL703L	.36 X .18	2.7K		100	125
CL903	.21 X .15	133K		250	50
CL903A	.21 X .15	67K		250	50
CL903L	.21 X .15	6.0K		100	50

Type 3 CdSe, peak spectral response 7350 angstroms, fast response, and very high light-to-dark resistance ratio. Can be used for high speed switching or counting. Sensitive to near infra red. For use with incandescent or neon lamps.

CL5M4	.55 X .18	1.5K	1:400	250	2000-500[1]
CL5M4L	.55 X .18	0.25K		170	2000-500[1]
CL604	.25 X .5	30K		300	75
CL604L	.25 X .5	1.5K		170	75
CL704	.36 X .18	30K		300	125
CL704L	.36 X .18	0.6K		100	125
CL904	.21 X .15	30K		250	50
CL904L	.21 X .15	2K		100	50

Type 4 CdSe, peak spectral response 6900 angstroms, lowest resistance photocells available. Can be used for "on-off" applications when low resistance is desired. For use with incandescent or neon lamps.

CL5M5	.55 X .18	9K	1:100	250	2000-500[1]
CL5M5L	.55 X .18	1.5K		170	2000-500[1]
CL605	.25 X .5	166K		300	75
CL605L	.25 X .5	7.5K		170	75
CL705	.36 X .18	166K		300	125
CL705L	.36 X .18	3.3K		100	125
CL905	.21 X .15	166K		250	50
CL905L	.21 X .15	10K		100	50

Type 5 CdS, peak spectral response 5500 angstroms (closely matches the human eye), most stable, lowest memory photocell available. Can be used in light measuring applications and precision low speed switching. For use with incandescent, fluorescent or neon lamps.

CL705HL	.36 X .18	28K	1:1000	100	125
CL905HLL	.21 X .15	15K		60	50
CL905HL	.21 X .15	100K		100	50
CL905HN	.21 X .15	700K		100	50

Type 5H CdS, peak spectral response 5500 angstroms (closely matches the human eye). Combines high speed, stability, linearity, and uniform color temperature response. Footnote 1. with and without heat sink.

Part No.	Diam. X Length (inches)	Resistance @ 2 ftc ± 33-1/3%	Minimum resistance ratio from 2 ftc to Dark within 5 sec.	Maximum voltage	Power Dissipation @ 25°C (mw)
CL707H	.36 X .18	500K	1:1000	300	125
CL707HM	.36 X .18	100K		250	125
CL907H	.21 X .15	600K		250	50
CL907HN	.21 X .15	300K		100	50
CL907HL	.21 X .15	24K		100	50

Type 7H CdS peak Spectral response 6200 angstroms. Very fast decay time coupled with low resistance and high linearity. Ideal for beam breaking applications.

CL5M7	.55 X .18	7.2K	1:300	250	2000-500[1]
CL607	.25 X .5	133K		300	75
CL707	.36 X .18	133K		300	125
CL707L	.36 X .18	2.7K		100	125
CL907	.21 X .15	133K		250	50
CL907N	.21 X .15	66K		100	50

Type 7 CdS, peak spectral response 6150 angstroms, moderate speed and ratio. Can be used in general beam breaking applications. For use with incandescent, neon or fluorescent lamps.

Part No.	Diam. X Length (inches)	Resistance @ 2 fc ± 33-1/3%	Minimum resistance ratio from 2 ftc to Dark within 5 sec.	Maximum voltage	Power Dissipation @ 25°C (mw)	Type

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire guage

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction code
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct curent
DIL dual in-line
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

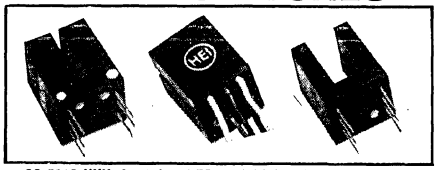
WPS word processing software

Y

YIG yttrium iron garnet

HEI OPTOELECTRONIC PRODUCTS

OPTICAL SWITCHES



HEI optical switches consist of an LED/photo-transistor pair operating across an air gap. Light beam interruption causes a change in output. Switches are contactless, highly reliable, and extremely long-lived. The LEDs operate in the infrared range.
Choose from 32 models, including some with integral hybrid amplifiers and Schmitt triggers. Both analog and digital models.

Two small packages available with either DIP pins or 12-in. leads. Most styles compatible with TTL/DTL/MOS circuits. OS-591S series have TTL/DTL square wave output. Switches are normally closed when uninterrupted. Precise alignment gives maximum output, and lens system reduces ambient light. HEI offers custom packaging, and can meet special performance requirements. Contact factory representative for specific information.

- **OS-521S-XXX** Contains LED and high-gain photo transistor. Medium speed, analog output.
- **OS-581-XXX** Contains LED and photo Darlington transistor. High gain, medium speed. Ideal for limit switching, presence detection. Analog output.
- **OS-561A-XXX** LED/photo transistor with integral hybrid amplifier for high speed, high output current. Used with TTL/DTL gates, analog output.
- **OS-591S-XXXL** Ultimate optical switch with hybrid amplifier and Schmitt trigger. Square wave output at TTL levels. Positive switching at all speeds.

PART NUMBER EXAMPLE:

OS - 5 6 2 A - 200 L W

- Optical Switch
- LED Series
- Sensor Series
- No. of LED/Sensor Pairs
- Optional Circuitry: Amplifier (A), Schmitt Trigger (S)
- Gap Dimension in mils: 060, 200
- Package Size: Small Housing (Blank), Large Housing (L)
- Wire Added Optional (W)

Absolute Maximum Ratings (25°C free air)

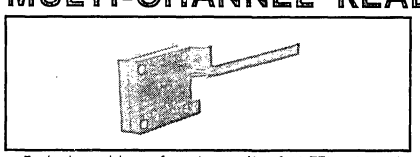
MULTI-CHANNEL READER



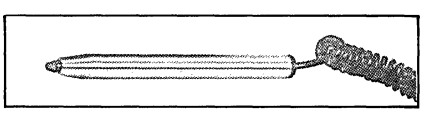
The 125-1 assembly contains infra-red LEDs which are spectrally matched with silicon photo transistors. Hybrid circuitry is included for TTL compatibility. Primarily designed as an 8 or 12 channel vertical format unit for line printers.
Number of channels and centerline spacing may be varied to suit assorted applications. Air gap may be specified, along with analog or digital output.
Using a data hole width of .030", an obstruction of ≤15% transmissivity will result in a low output. Obstruction of ≥40% transmissivity causes a high output. A glass wear plate provides self cleaning and dust elimination.

- Each channel has a fanout capacity of 10 TTL gates, with CMOS compatibility optionally available.
- Source and sensor sides electrically isolated to avoid ground loop.
- Non-standard data holes (less than .030" or greater than .073") available on request.
- Standard sensor spacing is .1094" for 12 channel unit, .100" for 8 channel unit (except for channels 6 and 7 which are .250").
- Supply voltage 4.5 to 5.5V. Output current 800 μA high, 16 mA low.
- Slot depth 1.725" standard, width 1.5", gap .020".

CHARACTERISTICS		MIN.	TYP.	MAX.
High Level Output Voltage (V_{CC}=4.75V, I_{OH}=-800 μA)	V_{OH}	4.5V	4.75V	
Low level Output Voltage (V_{CC}=4.75V, I_{OL}=16 mA)	V_{OL}		0.2V	0.4V
*Short Circuit Output Current (V_{CC}=5.25V)	I_{OS}	-1.8 mA		-2.5 mA
Supply Current (Per Channel)				
Source Side (V_{CC}=5.25V)	I_{CC}		21 mA	25 mA
Detector Side (V_{CC}=5.25V)	I_{CC}		3.6 mA	5.0 mA

*Not more than one output should be shorted at one time.

LIGHT PENS (New Color-Sensitive Light Pen Available in 1983)



HEI light pens for CRT terminals are solid state assemblies which utilize opto-electronics and hybrid circuitry to provide two TTL-compatible outputs: "Light Pen Hit" and "Light Pen Switch". The latter is generated when tip of pen is pressed against CRT face. A "Hit" is generated when an unblanked spot on the CRT face is under the pen tip. Signals are transmitted to control logic of the terminal for fast data manipulation.
Two models available: 120-3 has black plastic barrel, 120-2 has slimmer stainless steel barrel. Both available with optional coiled cord, and adjustable sensitivity. Resolution is excellent, along with high ambient light rejection. Both models light weight, meet Mil Stds. for radiation susceptibility and vibration.

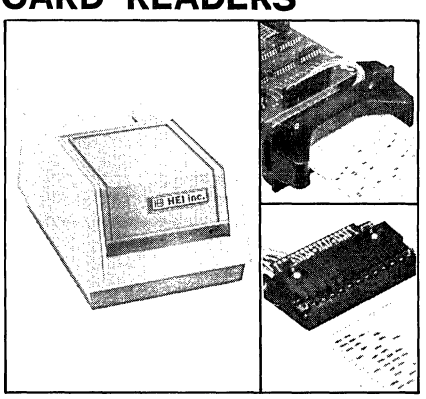
ELECTRICAL

Input Power ..... 5V @ 125 mA
Sensitivity ..... 7 FL Spot Brightness (Minimum Pickup)
Ambient Rejection ..... 100 FL
Response Time ..... <.5us @ 20 FL
Field of View ..... <.075 inches
Light Pen Switch .... TTL compatible (Normally high, low while nose cone is actuated)
Light Pen Hit ..... TTL compatible (Normally high, low during pulse period)

MECHANICAL

	120-3	120-2
Length	<6.2 inches	5.96 inches
Diameter	<.625 inches	.495 inches
Weight	<2 ounces	<2 ounces
Nose Cone Travel	<.100 inches	.090 inches
Cable Length	4 feet	4 feet
Cable Diameter	<.150 inches	.150 inches
Color	Black	Silver

CARD READERS



HEI offers several card reader models as well as OEM read heads. Call or write for details.

HEI's hand-fed card reader offers capability to interpret either marked or punched cards. High reliability hybrid circuitry provides TTL-compatible output. Designed to read standard 80-column cards with clock marks. Can handle other cards of reasonable length.
This reader has superior mark detection capability, and will read a wide variety of pencil and ink colors. Toleration of worn or mutilated cards is good.

The reader head is self cleaning, and no lubrication is required. Cards are fed by hand, internal mechanism transports cards through at 6"/second.
Either parallel or RS-232 interface format available. The unit may be ordered with or without internal power supply. For mark/sense applications, cards must have printed strobe marks on either margin.

Specifications

Input Power	115VAC, 60 Hz, .35A +5VDC, .2A −12VDC, .1A	Physical Size	4.75" (120.6mm) W 9.75" (247.6mm) D 4.25" (108mm) H
Output	TTL Compatible 12 rows paralleled up to 80 rows serial	Weight	4.5 lbs. (2 kg)

The Optoelectronic Specialists

HEI inc. **DEPT. EM • VICTORIA, MN 55386 • (612) 443-2500**

Introduction

Honeywell

Honeywell offers industry's broadest range of optoelectronic products. They include:

- LEDs
- Silicon photodetectors (Transistor, SCR and IC)
- Optically coupled isolators
- Transmissive switches
- Reflective switches
- V/LED and I/LED displays
- Encoders
- Emitter/Detector arrays
- Discrete chips
- Custom components and assemblies
- Laser diodes
- Pin diodes
- InSb photodiodes
- Mercury cadmium telluride photoconductors
- Fiber optic components
- Fiber optic systems (analog and digital)
- Fiber optic radial couplers

Honeywell strives for continuing leadership in high-technology optoelectronic products — today and tomorrow. That's why we're committing substantial resources to research and development efforts for the next generation of optoelectronics.

In addition to its standard products, Honeywell can develop custom components, assemblies and systems to meet exact customer requirements.

For more information or the name of your local distributor or representative, contact Honeywell today at (214) 234-4271.

Optical switches

- LED and photodetector in the same package.
- Reflective and transmissive (interrupter) types.
- Plastic and hermetic components.
- Transistor, Darlington and Schmitt trigger outputs.
- Variety of package designs.

Notes:

(1) Storage temperature −65°C to +150°C (hermetic)
−40°C to +85°C (plastic)

(2) Operating temperature −65°C to +125°C (hermetic)
−40°C to +80°C (plastic)

Specifications indicated are for 25°C ambient temperature.
See individual data sheets for temperature derating information.

(3) Beam angle is defined to be the total included angle between half intensity points.

(a) Output power is in mW/cm^2. The on-axis power is measured using a .081 (2.06mm) diameter apertured sensor placed .400 (10.16mm) from lens tip.

(b) Output power is in mW/cm^2. The on-axis power is measured using a .104 (2.65mm) diameter apertured sensor placed .535 (13.6mm) from lens tip.

Honeywell

Photodetectors

- Choice of diode, transistor, darlington and Schmitt outputs.
- Photodiodes for fast speed of response.
- Phototransistors offer medium response and high stability.
- Photodarlingtons for applications requiring extremely high sensitivity.
- Optoschmitt devices have voltage regulator, differential amplifier and Schmitt trigger on the same chip, eliminating additional signal processing circuitry.
- Plastic and hermetic packages available.

Photodiodes

Notes:

(1) Storage temperature −65°C to +150°C (hermetic)
−40°C to +85°C (plastic)

(2) Operating temperature −65°C to +125°C (hermetic)
−40°C to +80°C (plastic)

Specifications indicated are for 25°C ambient temperature.
See individual data sheets for temperature derating information.

(3) Angular response is defined to be the total included angle between half sensitivity points.

(a) Light source is 940nm LED.

(b) R_L = 100Ω

*The value of H is measured in mW/cm^2 from a tungsten source @ a color temperature of 2870°K.

FIBER OPTIC PHOTOELECTRIC SENSOR CABLES

New line of fiber optic sensor cables allow photoelectric sensing in confined areas where space prohibits conventional emitters and detectors. Electrical isolation is provided for access into explosive or wet environments. Fiber optic sensor cables are compatible to standard PC board active device mounts and bulkhead receptacles allowing all electronic components to be mounted on the PC board. Proximity type sensors combine emitter and detector into a homogenous .032″ or .062″ active diameter.

Specifications:
Transmission: 600 to 700 dB/Km
Numerical Aperture: 0.56NA
Acceptance Angle: 68°
Operating Temperature:
-40°F to +225°F
Outside Diameter of Cable: .125″
Minimum Bend Radius: .25″

MINIGLOSSARY OPTO SEMICONDUCTORS

Avalanche Photodiode: A photodiode that takes advantage of avalanche multiplication of photocurrent. It is particularly suited to low noise and/or high speed applications.

Contrast: A noticeable difference in color, brightness, or other characteristics in a side-by-side comparison.

Chrominance Contrast: The color contrast between two adjacent surfaces of identical area, shape, texture, and luminance. The human eye is more sensitive to differences in color than it is to differences in brightness.

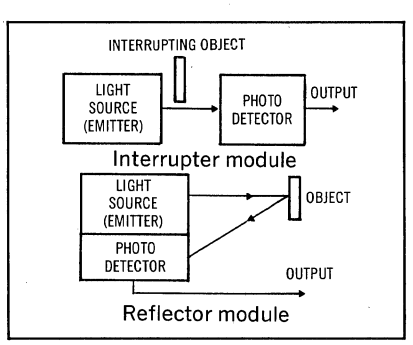
Current Transfer Ratio: The ratio of an optocoupler's output current to input current at a specified bias.

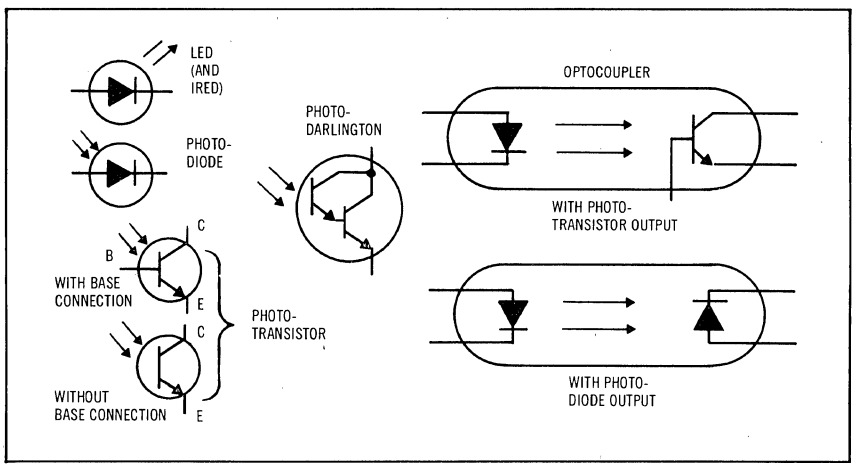
Dark Current: The leakage current of a photodetector with no incident light.

Dominant Wavelength: The wavelength that is a quantitative measure of apparent color of light as perceived by the human eye.

Infrared Radiation: The electromagnetic wavelength region between approximately 0.75 and 100 micrometers longer than the wavelength of visible light.

Interrupter (module): A device that produces an electrical output signal when an object breaks the light (visible or invisible) between a light source and a photodetector.





IRED: An infrared-emitting diode. See light-emitting diode.

Light Current: The current that flows through a photodetector when it is exposed to radiant energy.

Light-Emitting Diode (LED): A semiconductor diode that emits incoherent light at its PN junction when forward biased. The light can be in the visible or invisible (infrared) wavelength region.

Luminance Contrast: The observed brightness of a light-emitting element compared to the brightness of the "surround," an integral part of the device and inseparable from it.

Optocoupler: A device that transmits electrical signals, without electrical connection, between a light source (input) and the receiver (output). The input is generally an LED; the output might be a photodiode, phototransistor, a photo–Darlington, etc. Sometimes referred to as optoisolator.

Peak Wavelength: The wavelength at the peak of the radiated spectrum of an emitter.

Photo–Darlington: A light-sensitive Darlington-connected transistor pair. The photo–Darlington has a very high sensitivity to illumination or radiation.

Photodetector: A device that provides an electrical output signal when subjected to radiation in the visible, infrared, or ultraviolet regions of the electromagnetic spectrum. Photodiodes, phototransistors, and photo–Darlingtons are the most common type of photodetectors.

Photodiode: A junction diode that is responsive to radiant energy. Photodiodes have a high degree of linearity between the input radiation and the output current, and faster switching speeds than phototransistors.

Photothyristor: A thyristor whose switching action is controlled by light applied to the thyristor gate.

Phototransistor: A light-sensitive transister that delivers an electrical output proportional to the light intensity at its input. The low-level photocurrent that is generated is amplified by the current gain of the transistor. The base region (or gate in a FET) may or may not be brought out as an external terminal.

Point Source: A source with a maximum dimension less than one-tenth the distance between sources and detector.

Reflector (module): A device containing a light source and a photodetector that detects any object that reflects light produced by the source back to the detector.

- Photoconductive Cells
- Interrupter Switches
- Phototransistors and Photodarlingtons
- Retroreflective Switches
- Light Activated Switches

VACTEC

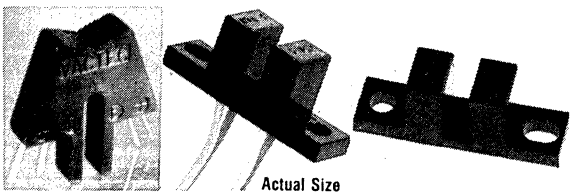
- Selenium Photovoltaic Cells
- Vactrols (Opto-Isolators)
- Infrared Emitters

INDUSTRY'S BROADEST OPTOELECTRONIC LINE

- Standard Silicon and Blue-Enhanced Photovoltaic Cells, Blue-Enhanced Photodiodes, and PIN Photodiodes

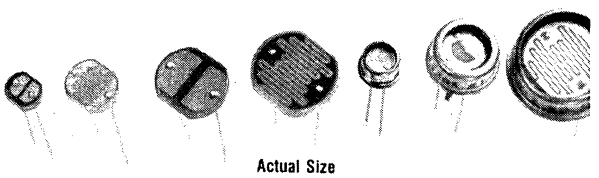
RETROREFLECTIVE & INTERRUPTER SWITCHES (Slotted)

Standard and custom optical switches—infrared GaAs LED and silicon phototransistor in an I-R transmitting housing. No openings or seams to collect dirt—available completely sealed for submersion during board cleaning—interchangeable with industry standard sizes. Request bulletins RPS-1 and SPS-1. New slotted switch with Schmitt Trigger output, bulletin SPS-2.



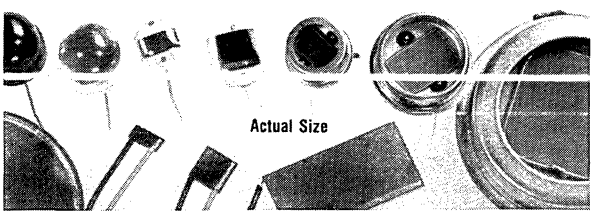
PHOTOCONDUCTIVE CELLS

Vactec light dependent resistors (LDR's) are available in three hermetic enclosures (TO-18, TO-5, TO-8) and 4 ceramic types. Ceramic types have automatically inserted wires which insure perfect contact integrity. Six materials of CdS, CdSe and CdSeS-CdS mixtures with spectral response peaks from 565-735 nm. Each material has a variety of sensitivities to satisfy all requirements. Request bulletin PCD-6.



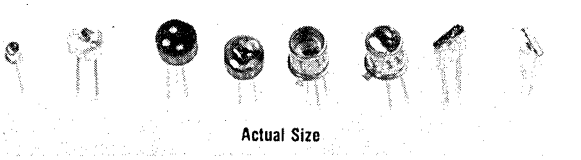
SILICON PHOTOVOLTAIC CELLS

Three processes: BLUE ENHANCED, LOW CAPACITANCE, STANDARD SOLAR. All available in a variety of hermetic, ceramic, as chips, or with flying leads. The BLUE ENHANCED cells are unique large area detectors with high U-V sensitivity to as low as 200 nm. Almost non-existent U-V enhancement effect with stability equivalent to high quality photodiodes. Request bulletin VTS3A. LOW CAPACITANCE cells have fast response less than 15μS with 10KΩ load. The high shunt impedance is desirable for driving amplifiers. Request bulletin VTS-2. SOLAR cells have high V_{OC} at low illumination (typ 200mV at .05mW/cm²). Linear over wide illumination range—request bulletin VTD-1.



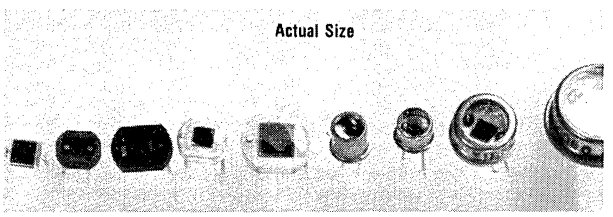
PHOTOTRANSISTORS — LED'S — PHOTODARLINGTONS — LIGHT ACTIVATED SWITCHES (LAS)

Phototransistors and photodarlingtons are NPN passivated—4 chip sizes of 25, 40, 50, and 60, mil square in TO-18, ceramic, coaxial, and lateral (side looking) packages. High light current at very low drive current ideal for instrumentation applications. Request bulletin VTTA-3A. GaAs I-R LED's with excellent stability in TO-18, T-1, T-1¾, lateral packages. Bulletin VTE-1. LAS (light activated switches) have high sensitivity with Schmitt Trigger output. Bulletin LAS-1, LAS-2.



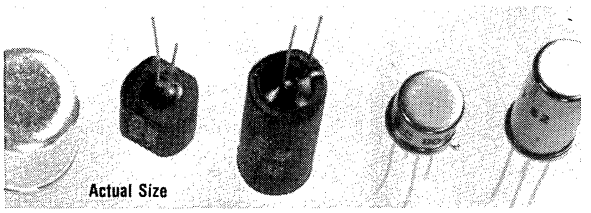
PHOTODIODES

BLUE ENHANCED photodiodes are extremely low dark current devices with excellent response in the U-V. Less than 10pA (I_D) for small chips. Large area diodes (VTB5051) 14.8mm² active area with 1.2A/(W/cm²) at 365nm and I_D of 250pA max. Request bulletin VTB-1B. FAST photodiodes have low capacitance. Use with reverse bias for fast response time and excellent linearity. Ideal for remote I-R sensor digital controls. Request bulletin VTD-1.



VACTROLS

Optical couplers using LED's, neons, or incandescent lamps as the emitter and Vactec photoconductive cells (LDR's) as the detector. For noiseless switching and signal monitors for audio. Neon types to sense telephone ring. LED types for triac gate control. Incandescent types for low cost true RMS sensor as voltage regulator or control of constant wattage heater. Five package types include 2 hermetic. Request bulletins VTL1, VTL2C, VTL3, VTL5CA, VTL5C8 and VTL9.



SELENIUM PHOTOVOLTAIC CELLS

Large area detectors for direct meter drive or in conjunction with amplifier. Spectral response peaks at 575 nm and is close to visible response. Available with integral #102 filter to match standard observer curve (CIE). Available in many flat or round cells with or without leads—also in 9 package styles including 2 hermetic. Request bulletin SPV-5A.

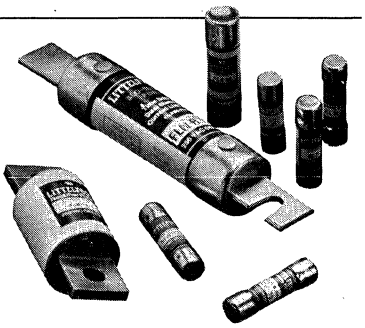
NEW FROM LITTELFUSE

The right industrial fuse for the right place. At the right price. Right on time.



We've been manufacturing small dimension fuses for over half a century, giving you state-of-the-art performance, reliability and service.

Now we can offer the same advantages in our new line of top quality industrial fuses: midget, semi-conductor rectifier, general purpose, hi-interrupting, one-time and renewable fuses. All backed by Littelfuse. And all available at competitive prices and ready for quick delivery. So when the time comes to replace your industrial fuses, we hope you'll save this handy guide and think of Littelfuse...the company that can meet all of your fuse requirements...big or small.

Industrial or Small Dimension Fuses...
We're ready to deliver

LITTELFUSE® Tracor

800 E. Northwest Highway, Des Plaines, IL 60016 • (312) 824-1188

Just give your Littelfuse distributor a call and discover how nice it is to do business the *Littelfuse Way.*

eem protective components selection guide

Protective Components... Most electronic equipment needs some sort of protection against catastrophic overloads from either external or internal sources. Fuses and circuit breakers are widely used to provide this protection, but there are other electronic products which can provide certain kinds of circuit protection.

That's the purpose of this EEM Product Selection Guide. It is designed to help you find the kinds of products you need for your specific design problem. Use this Guide as a quick directory to a specific page.

After you've found a product which seems to be the best answer to your problem, you'll probably want to talk to a local sales office or distributor. You'll find these listed in EEM's "Yellow Pages" in the front of this Volume. Or, you may wish to call the manufacturer directly. Before you do, get your thoughts and questions organized. Be prepared to talk to a telephone operator at the other end who may (or may not) have any technical knowledge. If you need technical assistance, state that as clearly as possible.

After you've reached the knowledgeable person, ask your questions in a realistic and rational manner. After all, you've had hours or days to come up with the questions, the other person needs to be brought up to your speed. It's helpful if you can tell the person you are looking at a specific page in EEM. Chances are the other person will have a copy of EEM nearby and can refer to the same page. This will help in your communications.

Remember, the overwhelming majority of manufacturers want to help you. That's why they put the data pages in EEM. They want you to see the pages, decide what you need and make that call for additional information, quotations or other data. Helping them to answer your questions helps you.

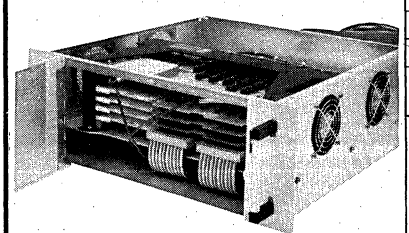
STATE-OF-THE-ART PROTECTION FOR POWER LINES AND DATA LINES

PROTECT YOUR SENSITIVE ELECTRONIC EQUIPMENT AGAINST ALL HAZARDS — FROM RANDOM TRANSIENTS TO LIGHTNING INDUCED SURGES

FIBER OPTIC TECHNOLOGY



FIBER OPTIC MULTIPLEXER

APPLICATION:

Computer to computer links

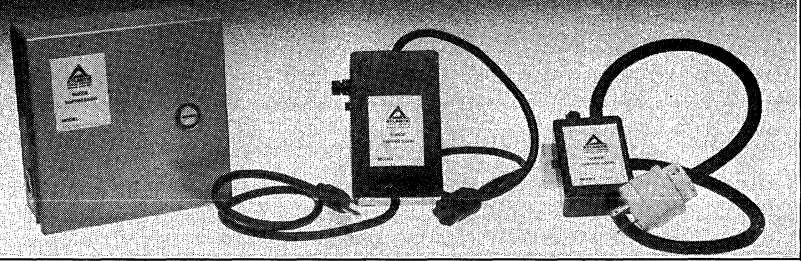
Secure communication links

Error free operation in high electrical noise environment

MULTIPLEXER FEATURES

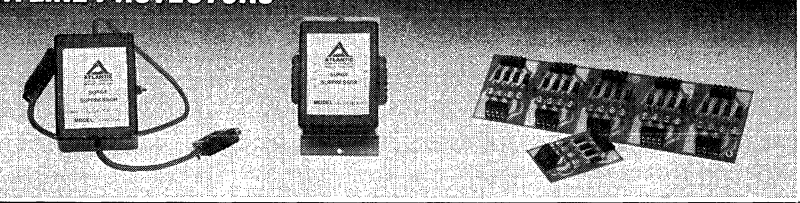
- Synchronous or Asynchronous operation
- 32 channel modular construction expandable to 128 channels/chassis
- Selectable channel/data rate configuration from 128 channels at 9.6 KBPS to 8 channels at 153.6 KBPS
- RS232-C electrical interface standard
- High density modular packaging and local/remote loop back provides easy maintenance and fault isolation
- Synchronous clocks provided at all standard rates at or below 9.6 KBPS

POWER LINE PROTECTORS



FEATURES:	M B SERIES	R B SERIES	H P B SERIES
Protection from surges	Up to 65,000A	Up to 25,000A	Up to 250A
Response time	50 nanoseconds	<10 nanoseconds	<10 nanoseconds
Holdover current	None	None	None
Failure indicator light	Yes	Yes	Yes
Solid state	100%	100%	100%
For protection of:	-power lines at service entrance and circuit breaker panels, against high current line surges and lightning induced effects	-solid state equipment control systems, and computers, where high energy powerline surge protection is required	-secondary power insertion applications to semiconductor equipment, such as computer, CATV, and control systems
Models available (VAC)	120, 240, 277, 350, 480, 600 split-phase or 3-phase	120, 240, 277 1-phase or split-phase	120, 240 1-phase, split-phase or 3-phase
Recovery time	Instant	Instant	Instant
Life of unit	500A>5000 times	500A>5000 times	250A>1500 times
Fail safe	Short	Short	Short
Other features	Wall or knockout mounting, metal enclosures	Completely self contained in phenolic enclosure with line cord and connectors as specified	

DATA LINE PROTECTORS



FEATURES:	RS 232 SERIES	D L SERIES	D L(E) SERIES
Protection from surges	Up to 6500A surges	Up to 6500A surges	Up to 6500A surges
Response time	5 nanoseconds	5 nanoseconds	5 nanoseconds
Holdover current	None	None	None
Recovery time	Instant	Instant	Instant
For protection of:	-the EIA (RS-232-C) digital interface of computers, terminals, and modems from surge and transient voltages caused by lightning, inductive load switching and static electricity	-low energy, low voltage DC data, telephone, or signal lines from surge and transient voltages caused by lightning, inductive load switching and static electricity	
Solid state	100%	100%	100%
Number of wires protected	1, 2, 3 and 7 standard additional wires available	2 to 8	4 to 20 each card
Other features	Plug-in protection for RS-232	Protection for RS-232, RS-422, 20 ma loop, etc.

LIGHTNING WARNING • LOCATION • PROTECTION

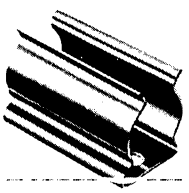
ATLEE COMPONENT HOLDERS

Atlee component clips are made of spring steel and beryllium copper because they afford the most generally desirable combination of properties. Specific selection of material will depend on conditions of the application.

Atlee offers a complete line of MS and NAS component clips. In addition clips can be manufactured to your specification for a variety of uses. Please contact the factory with your questions and special requirements.

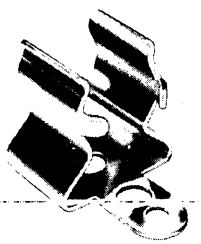
FEATURES

- The design of our component holders, from raw material through the finished product, ensures maximum performance and reliability under extreme usage, insertion, withdrawal force, and shock and vibration.
- Holding power increases as shock and vibration increase, measured by force required to remove component.
- Special contour design acquires closer set to component during shock and vibration, increasing security without localized pressure.
- Slotted design assures firm retention for fragile components without risk of injury.
- As an indication of the spring characteristics of Atlee's component holders, all of which are heat treated after forming, the following data is supplied; beryllium copper will withstand over 500 and spring steel 100 insertion-withdrawals of a slug 1/32" larger than nominal diameter, without metal fatigue.



Beryllium Copper, QQ-C-533a

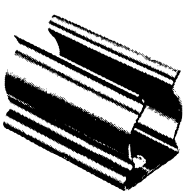
PLATING: cadmium CQ-P-416a; silver, QQ-S-365a; zinc, QQ-Z-325; tin, QQ-T-425; nickel, QQ-U-290; black matte, MIL-F-495A.
Various finishes available.
Designed to hold resistors, capacitors and small cylindrical devices. Fastened by means of rivets, eyelets, screws or similar fasteners.



Fuse and Resistor Holders

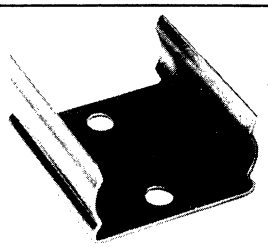
MATERIAL: phosphor bronze, QQ-B-750; beryllium copper, QQ-C-533a.

PLATING: silver, QQ-S-365a.
Finishes available silver plate.
Designed to hold fuses and ferrule-type resistors, plus reduce heating by providing high contact pressure.



Spring Steel, QQ-S-777a

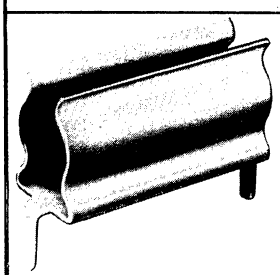
PLATING: cadmium CQ-P-416a; silver, QQ-S-365a; zinc, QQ-Z-325; tin, QQ-T-425; nickel, QQ-N-290; black matte, MIL-F-495A.
Various finishes available.
Designed to hold resistors, capacitors and small cylindrical devices. Fastened by means of rivets, eyelets, screws or similar fasteners.



Crystal Clips

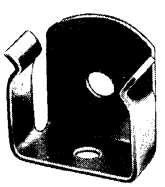
MATERIAL: spring steel, QQ-S-777a, spring steel S.A.E. 1065.

PLATING: cadmium, QQ-P-416a; silver, QQ-S-365a; zinc QQ-Z-325; tin, QQ-M-151; nickel, QQ-N-290; black matte, MIL-F-495A.
Various finishes available.
Designed to provide secure mounting for flattened elliptical components.



Tab Mounted Clips

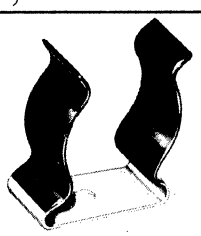
MATERIAL: beryllium copper, QQ-C-533a.
PLATING: cadmium, QQ-P-416a; silver, QQ-S-365a; zinc, QQ-Z-325; tin, QQ-M-151; nickel, QQ-N-290; black matte, MIL-F-495A.
Various finishes available.
Designed to hold resistors, capacitors, relays and similar cylindrical components. Fastened to a circuit board by tabs.



Transistor Clips

MATERIAL: beryllium copper, QQ-C-533a.

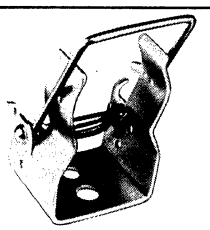
PLATING: cadmium, QQ-P-416a; silver, QQ-S-365a; tin, QQ-M-151; nickel, QQ-N-290; black matte, MIL-F-495A.
Various finishes available.
Designed to hold transistors without depending on soldered leads and at the same time act as a heat sink.



Industrial Component Holders

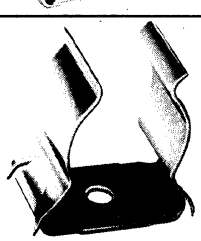
MATERIAL: spring steel S.A.E. 1065, .020 thick.

PLATING: commercial nickel, commercial nickel and vinyl coating
Designed for use in industrial and commercial applications.



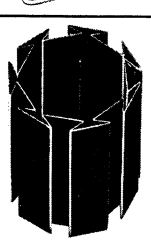
Locking Clips

MATERIAL: spring temper phosphor bronze, QQ-B-750.
PLATING: silver, QQ-S-365a; cadmium, QQ-P-416a; nickel, QQ-N-290; Class II, Type VI.
Various finishes available.
Designed to hold a fuse, ferrule-type resistor or similar component against the most severe shock and vibration.



No-Twist Clips

MATERIAL: spring steel, QQ-S-777a.
PLATING: cadmium, QQ-P-416a; silver, QQ-S-365a; zinc, QQ-Z-325; tin, QQ-M-151; nickel, QQ-N-290; black matte, MIL-F-495A.
Various finishes available.
Designed for holding capacitors and similar cylindrical components, without twisting.



Heat Dissipating Liners

MATERIAL: beryllium copper, .002 thick per QQ-C-533a, heat treated.

FINISH: black matte
Designed to cool many types of components combined with different types of cooling methods.

*Pigtail (AP)

Listed by Underwriters' Laboratories through 7 amperes. Certified by Canadian Standards Association through 5 amperes.

Type 8AG is designated as a normal blow fuse for use in general circuit protection. Their smaller size permits use where space limitations prevent use of Type 3AG. Pigtail leads (Type 8AP) are available when direct soldering into circuits is desired.

Listed by Underwriters' Laboratories from 700 mA to 5 amperes. Certified by Canadian Standards Association through 5 amperes.

Type 5MF fuses, described as fast acting are manufactured to meet the requirements of UL 198.6 and CSA 22.2. They permit European manufacturers of original equipment to substitute a fuse listed or certified by UL/CSA when exporting their equipment to the United States or Canada without making costly changes in mountings and printed circuit board layouts. Since fusing characteristics are different than those specified by IEC 127 for specific ratings, a careful analysis of the blowing curves should be made before determining the proper substitution. The small size of these fuses also offer the American/Canadian designer a protective device where space limitations are an important consideration. **Pigtail leads (5MFP) are available when direct soldering into circuits is desired.**

Microbel Type Micro Fuses are subminiature fuses for use in circuits where space requirements are an important factor. Built to meet the requirements of UL 198.6 for micro-fuses, they are supplied in the four different mechanical configurations illustrated below.

Type MF is supplied with Kynar sleeve. Type MFE* is supplied with epoxy coating. Marked with or without color coding, MF fuses are available with radial or axial leads with the axial construction packaged either bulk or taped and reeled.

* UL Pending.

Listed by Underwriters' Laboratories through 7 amperes.

Flat pack fuses, TYPE DJB with pigtails for direct soldering and TYPE BER for mounting with #10 screws, find broad application in telecommunication circuits and in low energy circuits where cost and space are important considerations. They are recognized under the component program of Underwriters' Laboratories and may be used in those circuits where the suitability of application has been investigated.

TYPE TE INDICATING FUSE

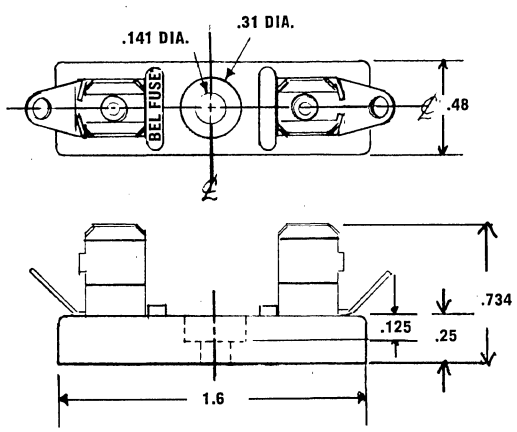
Mountings



All Bel Fuse clips are manufactured from .020 phosphor bronze stock and specially hardened to assure long life and minimum contact resistance. They are bright tin plated to facilitate soldering and prevent oxidation. In addition to the stock designs illustrated, clips can be quickly tooled to meet customer specifications.

The bases on mountings illustrated above are molded from a polyamid modified nylon rated by Underwriters' Laboratories at 94V-0. Clips are riveted to the base for maximum strength and are butted against a barrier to prevent rotation and assure alginment. The fuse mounts illustrated use Type FC-105 clips. Fuse mounts can be supplied with any combination of hole mount type clips.

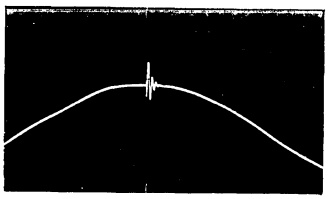
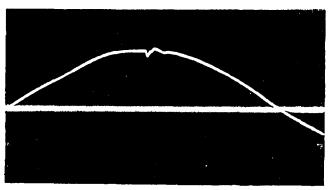
ISLATROL®

ACTIVE TRACKING SPIKE & TRANSIENT SUPPRESSORS THAT WORK

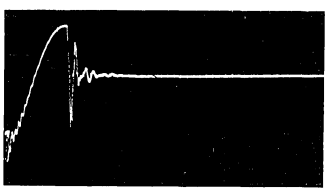
Why Islatrol is Different. These patented solid state units uniquely track the incoming sinusoid, will detect transients at any point on the sinusoid and, within 10 nanoseconds, become a low pass brute force active filter. No other device works like Islatrol, no other device protects like Islatrol.



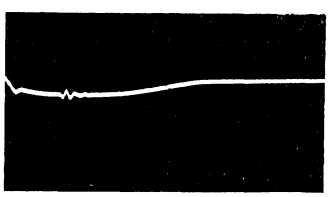
Input to Islatrol 700V transient



Output after Islatrol



Input to Islatrol 800V transient



Output after Islatrol

Suppression Performance:

Destructive or spurious transients, present at any point on the input sine wave of the AC power line, are clamped to within several volts, both above and below the instantaneous value of a filtered input sinusoid. For example, a two joule, 1000V spike (peak to peak) is suppressed to 10V (peak to peak). The above is accompanied with minimal power line loss.

control concepts
CORPORATION

Specifications

General Description:

A solid state, active tracking voltage suppressor which protects against transients, spikes, short-term outages and noise on incoming AC power lines to functional equipment.

Standard Voltage Inputs:

120V, 240V, 480V

Load Current:

Single Phase .5A - 100.0A
Three Phase 15.0A - 2000.0A

Power Line Frequency:

50-60 Hz. (400 Hz available)

Response Time:

5-10 Nanoseconds

Transient Reduction:

Minimum of 40 db, from the midband audio range through 50 MHz. The active filter improves the quality of the input line. Attenuation is greater than 50 db to IEEE surge withstand capability test No. 472-1974.

Preset Switch Level: ± 2V

Load Regulation:

Better than 1% from no load through full load.

Leakage:

Leakage to case less than 50 micro-amperes. Voltage isolation to case 5000V RMS.

Operating Temperature Range:

—40°C to 85°C

Reliability/Test Criteria:

Each ISLATROL® unit is 100% fully tested at an input energy level of two joules for approximately 1000 strikes, superimposed at the peak of the input sinusoid at main power line distribution impedance.

Standard Available Models:

OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

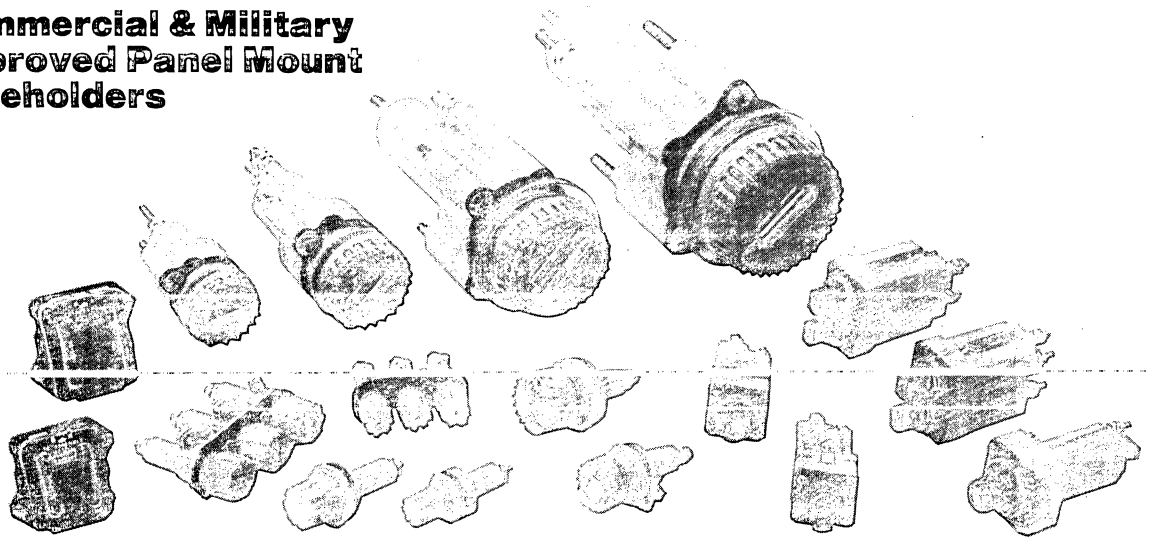
WPS word processing software

Y

YIG yttrium iron garnet

fic ·Fuseholders·Fuse Clips ·Blown Fuse Indicators

Commercial & Military Approved Panel Mount Fuseholders



- Superior Clip Design for Solid Fuse Contact
- UL Recognized & C.S.A. Certified
- Most Commercial Models are recognized under the Marine Electrical and Fuel System (PEQZ2) as "Ignition Protected Devices"
- Blown Fuse Indicating & Non-Indicating
- High Impact Plastic for Superior Strength
- Dead-Front, Watertight
- Military Versions Meet MIL-F-19207

Commercial Fuseholders

All Recognized by Underwriters Laboratories

HEINEMANN

CIRCUIT PROTECTORS

Heinemann Electric Company
Trenton, NJ 08650
(609) 882-4800 • Telex 843431

Heinemann offers the widest range of styles and current ratings available in high-quality, reliable circuit protectors. From miniature, environmentally-sealed devices operating in the 0.020 A to 30 A range to industrial devices rated to 250 A and capable of safely interrupting a 25,000 A overload, Heinemann has the circuit protector to do the job.

Hydraulic-magnetic operation.

Heinemann hydraulic-magnetic circuit protectors will hold at their rated capacity regardless of ambient temperature, allowing sure, precise control. Through hydraulic damping of the sensing-coil core, a variety of time-delay

			APPLICATIONS	NO. OF POLES	CURRENT RATINGS	MAX. VOLTAGE
TYPE J		The Series J is an exceptionally compact, lightweight, and moderately-priced breaker for single or multipole OEM applications. Snap-in mounting, rocker handles, sealed-mount, and push-button models are available. Color-coded caps serve as panel accents and for circuit identification. 	OEM (power supplies, medical-electronic equipment, control systems, office and EDP equipment), control panels, marine equipment, field instrumentation.	1 to 4	0.020 — 30A	277V, 50/60 Hz 240V, 400 Hz 415V, 50/60 Hz, 3-phase "Y" 65Vdc
SERIES AM		A low-cost, lightweight breaker available in single or multipole configurations, the Series AM features rear-connection studs, a high level of moisture resistance, and a current range up to 100A ac or 60A dc. Qualified under Mil-C-55629 to 50A dc and ac. 	OEM (data-processing equipment, mobile applications, humid environments)	1 to 4	0.020-60A (ac) 0.020-100A (dc)	250V, 50/60 or 400 Hz 277V, 50/60 Hz, 1-phase 480V, 50/60 Hz, 3-phase "Y" 65Vdc
SERIES CF E-FRAME		Priced considerably lower than competitive E-frame breakers, the Series CF is the most compact and versatile circuit breaker available for equipment and branch-circuit protection. Single and multipole models are stocked in a wide range of standard ratings for fast, off-the-shelf delivery. 	Panelboards, switchboards, branch circuits, EDP equipment, machine tools, environmental systems, single- and three-phase applications.	1 to 6	0.01 — 100A (ac) 0.04 — 100A (dc)	240V, 50/60 or 400 Hz 480V, 1- and 3-phase 125Vdc
SERIES GH EH-FRAME		This rugged new EH-frame breaker offers all the advantages of a completely magnetic three-pole breaker with 14,000A interrupting capacity for less than most thermal units. Compact, environmentally stable to 100A at 480Vac and 250Vdc. 	Motor controls, air conditioning, electric heating, computer main frames, transportation, indoor or outdoor installations.	3	10 — 100A (ac) 10 — 100A (dc)	480V, 50/60 Hz 250Vdc
SERIES GJ		Where space is at a premium and current capacity up to 250A is called for, the Series GJ is the answer. Available in one-, two-, or three-pole models, it is especially suitable for panelboards, service-entrances, and electric vehicles. 	Commercial, industrial, and residential service—entrance or panelboard applications; lighting, appliance, transformer, electric vehicles, EDP power supplies, heating, air conditioning, and electronic circuit protection.	1 to 3	100 — 250A	240V, 50/60 Hz 125/250Vdc
RE-CIRK-IT® SERIES KD		The UL-recognized Re-Cirk-It® is a low-cost, pushbutton circuit protector, designed as a direct replacement for glass fuses. Resettable up to 1000% of its current rating at 2.5 through 15A, 500% at 0.25 to 2A. 	Consumer products, appliances, replacement for conventional fuse assemblies (5/8" diameter fuseholders).	1	0.25—15A	250V, 50/60 Hz 32Vdc

© Heinemann

characteristics can be introduced to match circuit requirements.

Heinemann invented and pioneered the hydraulic-magnetic breaker, now a specified standard where critical hold and trip operation must depend solely on current, and where breaker derating cannot be tolerated.

INTERRUPTING CAPACITY	UL/CSA RECOGNIZED OR LISTED
1000A 5000A with proper backup protection	Recognized, Component Recognition Program

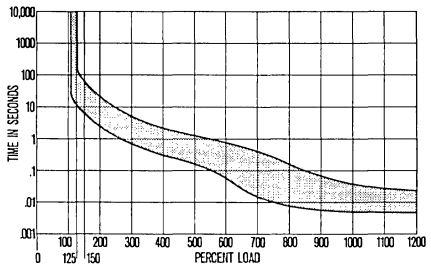
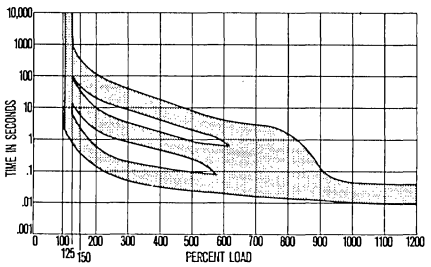
18,000A @ 240V, 50/60 Hz 10,000A @ 125/250Vdc 14,000A @ 160Vdc 25,000A @ 65Vdc	240V, 50/60 Hz and 125/250Vdc: Listed
1000A @ 250V, 50/60 Hz 200A @ 32Vdc	Recognized, Component Recognition Program

Typical Time-Delay Curves

Below are some typical time delay curves and characteristics of Heinemann circuit breakers. The graph on the left illustrates the curve for a Type J breaker suitable for long delay motor-start applications at 50/60 Hz. The one on the right shows the three curves available for the Series CF at 50/60 Hz. Other special application curves, including high-inrush, dc, and non-time-delay, are also available.

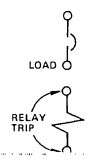




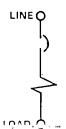
Special-Function Circuits for Protection and Control

Because of the flexibility of hydraulic-magnetic design, Heinemann breakers (except KD and TX) can be furnished with a number of different special-function internal circuits, as shown below. These circuits are highly useful for out-of-the-ordinary protective and control applications. Often, a single breaker with a special-function circuit can perform the duties of several components.

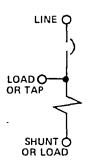
RELAY-TRIP
Provides for remote actuation using separate control circuit. Electrical isolation permits use of a different current or voltage from contact circuit. Both time-delay and non-time-delay constructions are available.



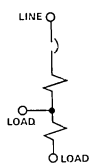
SERIES-TRIP (Standard internal circuit)
Ideal for use as both power switch and overload protector. Usually installed in series with line and load terminals to provide circuit interruption in the protected circuit.



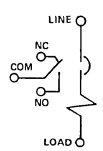
SHUNT/TAP
Use of third terminal permits remote tripping by utilizing line voltage with or without a time-delay response. On breakers rated up to 1A, the trip point may be raised by shunting with an external resistor on the shunt/tap terminal.



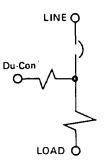
DUAL RATING
Two concentrically-wound sensing coils provide two discrete current ratings in the same breaker. Protects equipment designed to operate at two different current levels or supply voltages within certain limitations.



AUXILIARY SWITCH
Used for logic functions, alarms, lights, and other circuits. Miniature snap-action SPDT or DPDT switch is mounted on back of breaker, mechanically connected to switching mechanism. Contact capacity: 10A at 125/250V, 50/60 Hz; 4A resistive at 30Vdc; 2.5A inductive at 30Vdc. Minimum operating voltage: 6Vdc or ac, at 3VA dc or ac.



DU-CON™ (DUAL-CONTROL)
Provides sensing of both overcurrent and separate voltage signals in a single-pole breaker through a small, non-continuous-duty voltage sensing coil. DU-CON overload and voltage coils must be specified separately.



NEW!

Heinemann Series TX protector

Economical, attractive, one- or two-pole circuit protectors that provide on/off switching and add style with a variety of rocker handle colors. Available with optional rocker lighting, Series TX comes in ratings from 2 to 20 A at 125 Vac, 50/60 Hz or 32 Vdc, and 2 to 10 A at 250 Vac, 50/60 Hz. UL-recognized, CSA-certified, designed to meet requirements of VDE. Two-pole version may be specified with different ratings for each pole.

LITTELFUSE CIRCUIT PROTECTION DEVICES

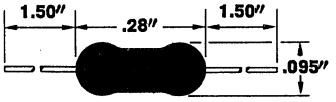
PICO II™ SUBMINIATURE FUSES

- World's smallest fuse for use in micro electronic circuits including computer and aerospace applications.
- Short circuit current of up to 300A.
- Low resistance values.
- Hi-speed action.
- Epoxy coated body for protection against environmental conditions.
- Withstand axial pull of 7 lbs.
- Available with or without color-coding per I.E.C. standards.

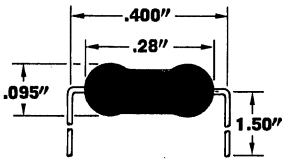
ENVIRONMENTAL CHARACTERISTICS

- Operating ambient temperature range: —55°C to 125°C
- Current carrying capacity: —55°C = 110% of rating; 25°C = 100% of rating; 125°C = 80% of rating
- Withstand vibrations of 10 to 2000 cps at 20 G's per method 204 test condition D of MIL-STD-202.
- Withstand shock of 100 G's for 6 milliseconds per method 213 test condition I of MIL-STD-202.

255 Series - Axial Leads



256 Series - Radial Leads



Note: Leads are solder-coated copper, .025" diameter for 1/16-10A, .032" diameter for 12-15A.

Blow Time: 100%, 4 hrs. min.; 200%, 5 sec. max. (1/16-10A) 10 sec. max. (12-15A)

U.L. Recognized through 10 amps.

Note: To order axial lead PICO II fuses without color-coding, change **255** to **251**. To order radial lead type without color-coding, change **256** to **252**.

MICROFUSE SUBMINIATURE FUSES (125V)

Designed for applications where space is a critical factor. Ideal for installation on printed circuit boards. Short-circuit interrupting capacity — 125 volts at 10,000 amperes A.C.

Blow Time: 100%, 4 hour min.; 200%, 5 sec. max.

Size: 1/4" dia. x 11/32" (fuse body).

U.L. Recognized.

Plug-in, transparent cap type listed. Use prefix **272** for plug-in, metal cap; prefix **279** for pigtail, transparent cap; prefix **278** for pigtail, metal cap.

3AG FUSES (250V or less) 1/4" x 1 1/4"

Quick-acting, normal-blo fuses for general circuit protection.

3AG PIGTAIL FUSES

Same as above but with pigtails for direct wiring into chassis. Leads are 1-1/2" long, copper wire.

Blow Time: 110%, 4 hour min.; 135%, 1 hour max.; 200%, 5 sec. max.
U.L. Listed and Certified by CSA through 8 amps.

Note: Internal construction may vary depending on ampere rating.

* 125 volt. Note: To order fuses with pigtali leads, change **312** series number to **318.**

3AG SLO BLO® FUSES (250V or less) 1/4" x 1 1/4"

Designed to withstand momentary high current surges but still blow quickly on shorts. Provide protection for equipment with high reactive current surges or heavy starting currents such as solenoids, motors and lamp circuits.

3AG SLO BLO® PIGTAIL FUSES

Same as above but with pigtails for direct wiring into chassis. Leads are 1-1/2" long, copper wire.

Blow Time: 110%, 4 hour min.; 135%, 1 hour max., 200%, 5 sec. min.
U.L. Listed and certified by CSA through 7 amps. U.L. Recognized from 8-30 amps.
Note: Internal construction may vary depending on ampere rating.

3AB CERAMIC SLO BLO® FUSES (250V or less) 1/4" x 1 1/4"

Similar to 313(000) series above, but have higher interrupting capacity.

Blow Time: 110%, 4 hour min.; 135%, 1 hour max.; 200%, 5 sec. min.
U.L. Listed 1/100 - 10 amps.
***U.L. Recognized** 15 - 30 amps.
C.S.A. Certified 1/4 - 3-2/10 amps.

*Note: 15 and 20 amp ratings are U.L. Recognized at 250V but meet all requirements for listing at 125V.

3AB CERAMIC BODY FUSES (250V or less) 1/4" x 1 1/4"

Ceramic body and arc-quenching filler in higher amperages provide high interrupting capacity.

Blow Time: 110%, 4 hour min.; 135%, 1 hour max.; 200%, 15 sec. max.
U.L. Listed through 15 amps.
Certified by CSA through 15 amps.

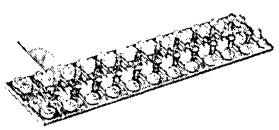
TYPE T FUSE BLOCKS WITH SCREW TERMINAL CLIPS



Open type blocks available for 3AG and 5AG fuse sizes from one to twelve poles. Bases are of grade X black laminate with 1/32" insulator sheet cemented to underside. Screw terminal clips.

Mounting Hole: 3AG — .142"/.147" dia. with .295"/.302" by 82°CS. **5AG** — .171"/.176" dia. with .342"/.349" x 82°CS.
Clip Material: 356 Series—Nickel Plated Spring Brass. **359** and **556** Series—Silver Plated Beryllium Copper.
Size: Width: 2-3/8" (3AG), 2-3/4" (5AG). See chart for length dimensions. **356 Series is Recognized under the Components Program of Underwriters Laboratories.**

No. of Poles	For 3AG Fuses Length (In.)	For 3AG Fuses Part No.	For 5AG Fuses Length (In.)	For 5AG Fuses Part No.

For 3AG block with silver plated beryllium copper, change series number to **359.**

TYPE S BLOCKS WITH SOLDER LUG CLIPS

Similar to Type T blocks above but with solder terminals which are an integral part of the clip. For 3AG and 8AG fuses.

Mounting Hole: .142"/.147" dia.

Clip Material: 357 and **387** Series — Tin Plated Spring Brass. **357(200)** Series — Silver Plated Beryllium Copper.

Size: Width: 1-5/8" (3AG), 1-3/8" (8AG). See chart for length dimensions.

Recognized under the Components Program of Underwriters Laboratories.

No. of Poles	Length (Inches)	For 3AG Fuses Catalog No.	For 8AG Fuses Catalog No.

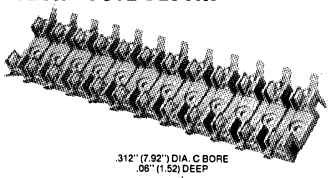
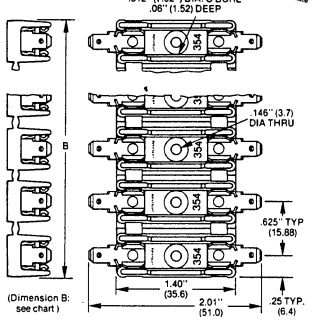
LITTELFUSE CIRCUIT PROTECTION DEVICES

OMNI-BLOK™ FUSE BLOCKS





For 3AG fuses. New, low profile fuse blocks with "break-away" pole feature . . . 12 pole units may be broken apart as needed to obtain desired number of poles. One piece-high amperage clip/terminal eliminates resistance build-up and allows operation at higher current levels than previous designs.

Specifications: 354 (000) Series (Solder type terminals); 30 amps, 300V. 354 (600) Series (3/16" Q.C. terminals); 20 amps, 300V. 354 (800) Series (1/4" Q.C. terminals); 30 amps, 300V.

Materials: Clip/terminal; High tensile spring brass, electro-tin plated. Base; Grey Polyester, glass reinforced. UL-94V0 flammability rating.

Special Options: Standard color is gray. Contact factory for special colors. Single pole units can be supplied with anti-rotation boss. Contact factory.

U.L. Recognized up to 30 amperes, 300V

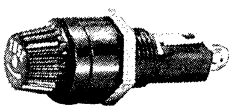
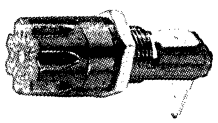
3AG FUSEHOLDERS WITH SOLDER TYPE, 3/16" OR 1/4" QUICK-CONNECT TERMINALS

Extend only 1" behind panel. **UL Recognized and Certified by CSA.**

KNURLED KNOB



FLUTED KNOB



SPECIFICATIONS

Electrical: Rated at 20 amperes for any voltage up to 250V. Dielectric withstanding voltage exceeds 2400 volts.

Mounting: Withstands 15 pound/inch (1.69Nm) mounting torque. Maximum panel thickness .18" (4.8)

Molded Parts: Black thermoset

Knob: Bayonet style with white lettering

Brass Terminals: Tin plated except 1/4" quick connect terminals are nickel plated.

Hardware: Standard fuseholders supplied with a neoprene washer and a hex nut unassembled. Lockwasher (L) and drip-proof seal (P) variations available by adding appropriate suffix letters (L, P or PL) to catalog number.

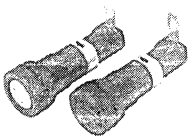
SHOCK-SAFE FUSEHOLDERS FOR 3AG OR 5 x 20mm FUSES



- Designed to meet IEC (International Electrotechnical Commission) specifications 65 and 257.
- Eliminate possibility of electrical shock.
- Bodies accept 1/4" x 1 1/4" or 5 x 20mm fuses with use of appropriate knob.
- **U.L. Recognized. Certified by C.S.A.**

SPECIFICATIONS

MOLDED PARTS
Body material: black phenolic
Knob material: grey or black polyester
Hex nut material: glass filled polycarbonate

KNOB
Finger grip or screwdriver slot types
Spring loaded, bayonet style
Fuse extractor
Nickel plated brass insert

TERMINALS
Electro tin plated brass
Accept solder or 3/16" female connector

MOUNTING
Withstands 15 pound/inch mounting torque
Maximum panel thickness: 5/16"

ELECTRICAL CHARACTERISTICS
300 volt rating 20 amperes max.
Insulation resistance: 10,000 megohm minimum at 500 VDC
Contact Resistance: .005 ohms average at 20 millivolts
Dielectric strength: 4000 volts minimum

ENVIRONMENTAL
Ambient temperature: −40°C to +85°C
Vibration: 10-500 Hz, .03" constant amplitude or 10 G's constant acceleration

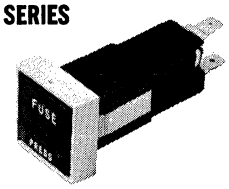
LITTELFUSE CIRCUIT PROTECTION DEVICES

LOW PROFILE FUSEHOLDERS 348 (000) SERIES



Snap into panel. Eliminate need for mounting hardware. Square cap design and choice of cap and bezel colors. 3/16″ or 1/4″ Q.C. terminals. Indicating Type has standard body and bezel in black — other bezel colors to special order. **U.L. Recognized and Certified by CSA.**

SPECIFICATIONS

Molded Parts: Body - Phenolic Resin. Cap - High temperature thermoplastic.

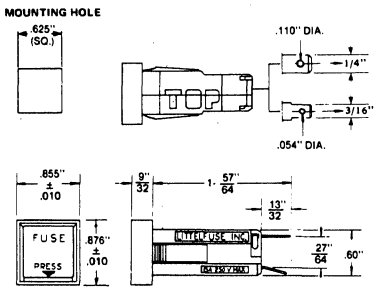
Terminals: One piece-brass-Electro-tin plated.

Electrical Characteristics: **348** series; Rated at 15 amps for any voltage to 250. **344** Series: Rated at 15 amps to maximum lamp voltage. Dielectric withstanding voltage between terminals and terminals to ground at room temperature and 90% R.H. exceeds 1,500 volts.

Vibration: Withstands 10-55 Hz at .06″ double amplitude.

Mechanical Shock: Withstands 50G for 11 milliseconds duration.

Mounting: .625″ sq. hole in 1/32″ through 1/8″ thick chassis panel.



HOW TO ORDER LOW PROFILE FUSEHOLDERS

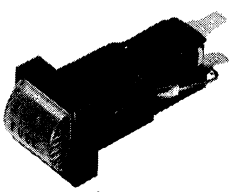
The six digit catalog number is a coded description of the finished unit. To specify type required, select appropriate code numbers from chart below. To order a cap assembly only for 3AG fuses, use **348** series numbers and insert a "0" in the terminal style and bezel color locations. To order a body assembly only, use **348** series number and insert a "0" in the cap color location.

SIX DIGIT CATALOG NUMBERS CONSIST OF

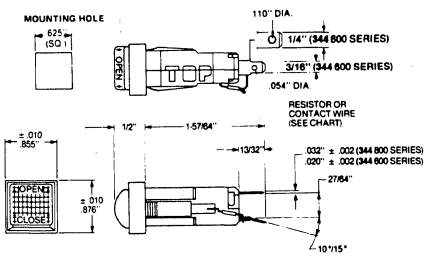
Series No.	Terminal Style	Bezel Color	Cap Color
348 For 3AG Fuses		1 Red	1
		2 Green	2
		3 Yellow	3
		4 Blue	4
	6 3/16″ Wide Terminals	5 White	5
	8 1/4″ Wide Terminals	7 Black	7
		9 Grey	9

For example: 348615 is a holder with 3/16″ terminals, red bezel and white cap.

INDICATING LOW PROFILE FUSEHOLDER (344 600 AND 344 800 SERIES)



Specifications: See above.



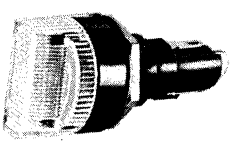
HOW TO ORDER LOW PROFILE INDICATING FUSEHOLDERS

With 3/16″ terminals

Catalog Number	Lamp Type	Lamp Voltage	Lamp Current	Resistor	Lens Color
344601	Incandescent	6	40 mA	No	Amber
344602	Incandescent	14	80 mA	No	Amber
344603	Incandescent	28	40 mA	No	Amber
344604	Neon	120	1.2 mA	Yes	Clear
344605	Neon	240	.3 mA	Yes	Clear

Note: To order holder with 1/4″ terminals, change the 6 to 8. Example: **344 801.**

3AG INDICATING FUSEHOLDERS



For visual indication of blown fuse. Two lens styles available. U.L. Recognized.

SPECIFICATIONS

Molded Parts: Black phenolic.

Hardware: Hexagon Nut; Steel, zinc chromate conversion coated. Washer; oil resistant rubber.

Knob: Extractor type, bayonet lock, knob of transparent high density styrene.

Terminals: Brass, electro tin-plated.

Electrical Characteristics: 20 amp-250V.

344(000) SERIES

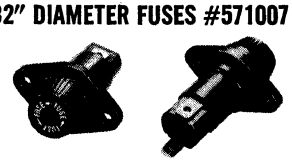
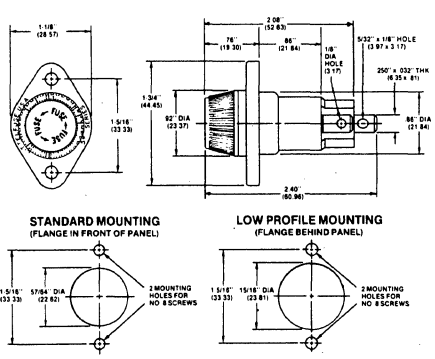
Note: All holders furnished with rubber washer, hex nut, lock-washer, and O-Ring (for drip-proof application, if required). Part numbers with suffix A are packaged in individual bags. All others are shipped bulk. Resistor is furnished with lamp.

PANEL FUSEHOLDER FOR 13/32″ DIAMETER FUSES #571007



Versatile fuseholder for 13/32″ diameter fuses with lengths from 1-3/8″ to 1-1/2″. Minimum rear panel projection, 3/4″ spacing between mounting flange and terminals to accommodate even the thickest panels. Recessed side terminal for additional shock-safe characteristics. For watertight version, order #571007P. **U.L. Recognized and Certified by CSA.**



SPECIFICATIONS

Molded Parts: Black Phenolic.

Knob: Spring-loaded, extractor type, knurled for finger grip. Threaded nickel-plated, brass insert. Watertight O-ring seal provided with model 571007P. White markings.

Terminals: Side terminal, electro tin-plated brass. End terminal electro tin-plated brass with elongated 1/8″ hole (5/32″ long). Terminals will accept solder or 1/4″ female connector.

Electrical Characteristics: Rated at 30 amps for any voltage up to 600. Dielectric withstanding voltage greater than 2400V. Contact resistance less than 0.004 ohms when checked in accordance with MIL-STD-202, method 307.

EEM PRODUCT SELECTION GUIDES

Use the EEM Product Selection Guides. There are 33 Guides in this edition of EEM. See page 2 (1•2, 2•2, 3•2) of each volume to locate the Product Selection Guides that pertain to your needs.

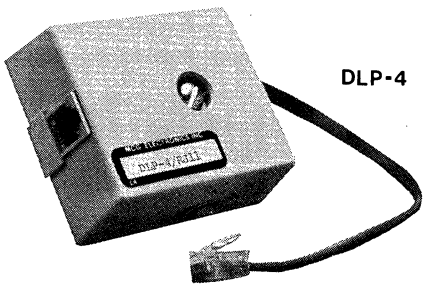
Protection For Signal/Data/ Telephone Lines

RS-232, RS-422, RS-423, 20ma loops, Modems

DLP-3

DLP-3: RS232 Protection

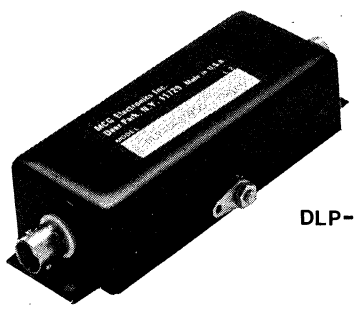
Designed to provide complete protection for computers and terminals. RS232 connectors make installation easy, taking minutes for non-technical personnel. Pins 2, 3, 7, and 20 are protected.



DLP-4

DLP-4: Modem Protection

Dial-up protection unit puts an end to downtime and costly equipment failure for dial-up modems and CPU's. Compatible with RJ11 and RJ45 telephone jacks.



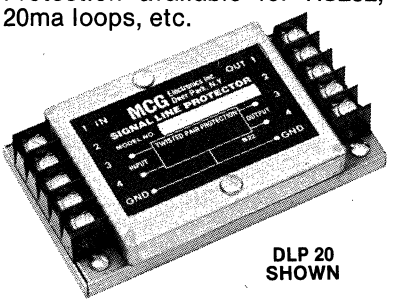
DLP-5

DLP-5: Video Cable Protector

Prevents coaxial cable from transmitting damaging transients to sensitive loads. Using isolated BNC connectors, the DLP-5 shunts damaging transients from the cable shield and center conductor to earth ground. Ideal for communications protection where wide baud width (to 20 mhz) is desired. The DLP-5 protects one circuit.

DLP-10: Multiple Protection

Gives protection for 2 wires or 1 twisted pair circuit. Case or last terminal provides ground point. Protection available for RS232, 20ma loops, etc.



DLP 20 SHOWN

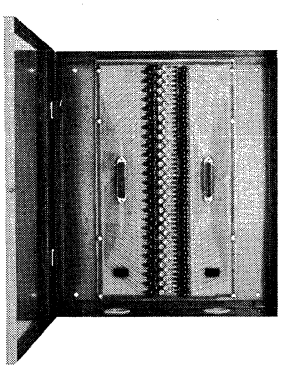
DLP-20:
Protects 4 wires or 2 pairs.

DLP-30:
Protects 8 wires or 4 pairs.

DLP-33:
Open pc board, protects 24 wires or 12 pairs. Not sold with case or cover.

DLP-36: PABX Protection

Provides protection for PABX, modems, micro processors, CPU's, and terminals when many data lines are involved. Can protect up to 50 individual wires or 25 circuit pairs. Protection for RS232, 20ma loops, etc.



DLP-40: Rack Mounted Protection

Independent protection for up to 20 terminals or printers per system.
Plug-in protection cards for all applications, such as RS-232, -422, -423, 20ma loops, etc.
Can protect up to 100 individual lines per system.
Ideal for data logging, monitoring complex instrumentation.
Protects computer main frames.

Protection For AC Power Lines

Facility Protection

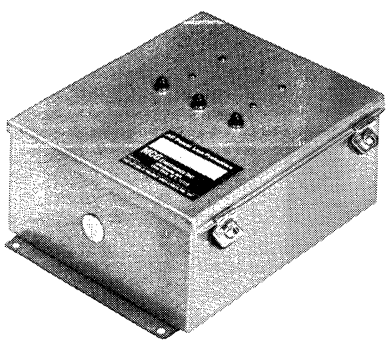
Surge-Master Heavy Duty Power Line Protectors give complete protection against all transients.

All computers and computer-based systems are vulnerable to transients on AC power lines caused by heavy motors starting up, power company load adjustments, welding operations–and, of course, lightning. Even if your equipment operates from batteries charged by a UPS, you're not safe. If lightning knocked out your UPS, how long could you keep going?

The MCG Surge-Master offers two stage protection. The first reacts in nanoseconds to absorb lesser transients and the leading edges of major ones. The second stage absorbs the big ones and has three modules on each line. So, in the unlikely event that one module should be knocked out, there are still two protecting you. And a system of indicator lights tells you not only when a fault has occurred, but exactly where it is. Modular construction makes replacement of damaged modules quick and easy. Initial installation requires minimal power interruption.

Available with capabilities from 100 to 3000 amps, for 120, 240, and 480 VAC, and for single, 3 phase, wye and delta power systems.

Computer Grade Protection



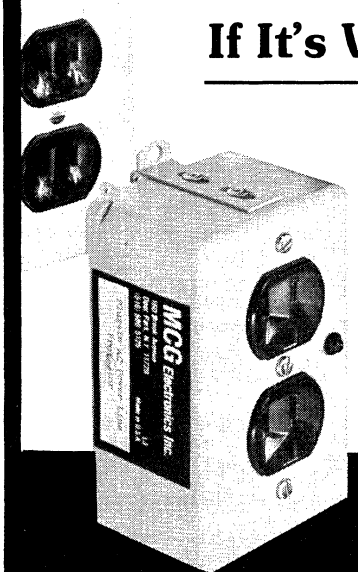
The MCG 5000 Series keeps "transients" and "noise" from damaging sensitive electronic equipment.

The 5000 Series offers moderate cost, high performance protection for computers, mini-computers, and other sensitive electronic equipment against power line noise and destructive high voltage surges, spikes, and transients.

"Transients" are caused by lightning, heavy machinery, elevators, even electric office equipment or fluorescent lights being turned on or off. ("Noise is a rapid series of small transients caused by radio-frequency or electromagnetic interference.") Strong transients can knock your equipment out, lesser ones make it lose data and give garbled information. Even those having no noticeable effect damage the IC's in your equipment, ultimately causing it to fail.

The 5000 Series combines filtering (50db/500kz) and substantial suppression of high energy transients in a variety of protectors that respond in less than 5 nanoseconds, and have 320 joule energy handling capability. These units are suitable for operation on 120VAC to 480VAC,to 40 Amps.

If It's Worth Protecting, It's Worth A P210



- **A lot of protectors look like the P210**
- **Many claim to protect like the P210**
- **None, in fact, *are* like the P210**

Designed to keep "transients and noise" from damaging sensitive electronic equipment, the Line-Master™, Model P210 employs a sophisticated combination of brute force surge protection and impulse filtering. The P210 reacts in 5 nanoseconds, has an energy absorption capability of 160 joules, and resets automatically when the transient has passed. In use, it is simply plugged into any AC outlet, and the equipment plugged into it. Rated at 117VAC and 10Amps, the P210 converts your AC wall outlet into a "dedicated line". The P210 sells for $147 each, delivery is stock to 2 weeks.

Other models are available for installation in cabinets or equipment racks to protect one piece or multiple equipment simultaneously.

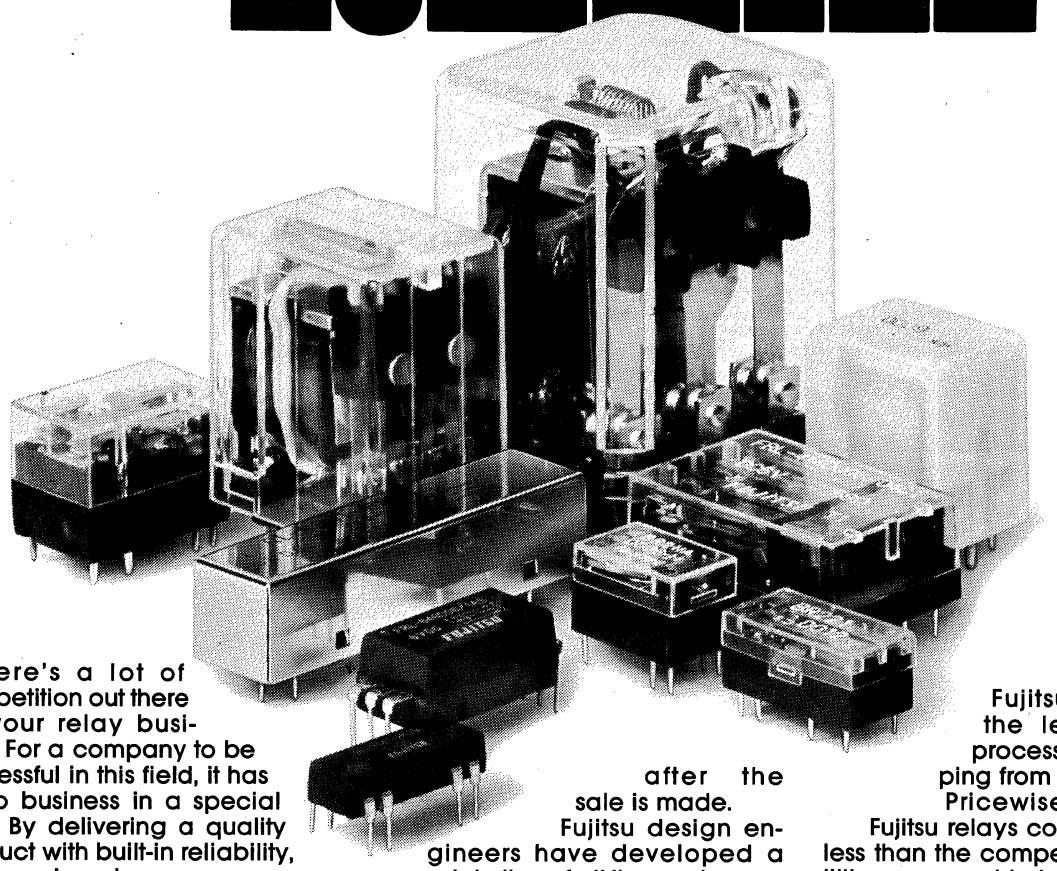
FUJITSU: RELAYS



There's a lot of competition out there for your relay business. For a company to be successful in this field, it has to do business in a special way. By delivering a quality product with built-in reliability, price and service.

Fujitsu relays have it all. Our relays meet or surpass the quality of those made by the competition. They're built to do a job and do it right. And Fujitsu relays are compatible with most relays on the market.

As far as service, Fujitsu considers it a point of pride, as well as good business to cater to your company's needs before, during and after the sale is made.

Fujitsu design engineers have developed a complete line of all the most popular relays in use today. A supply of these standard relays is always readily available. We also offer a customizing service where we work with your engineers to design relays tailored specifically to your needs.

Our warehouse is stocked to supply your company with samples of our fine products. Quantity orders come directly from the factory. And Fujitsu can match the lead time for processing and shipping from any source.

Pricewise, you'll find Fujitsu relays cost the same or less than the competition, leaving little reason not to try us.

For general purpose to flat package relays, for Mercury-wetted contacts to molded inline package (regular reed) and DIPs (latched reed), it pays to switch to Fujitsu where quality, reliability, price and service are part of our product.

For more information on our superior components, call or write us today.

GENERAL PURPOSE RELAYS

On the following pages you'll find summary specifications for our most popular relays. For additional technical information on these relays, or those marked (*), which are not covered here, call (800) 854-8474. In California call (714) 540-4190. For ordering information, call our local sales office listed in the eem yellow section.

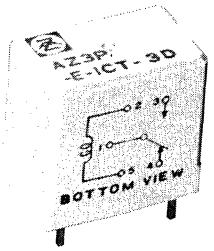
SERIES AZ 3

SPDT Contacts to 10 Amps



L: 1.21″
W: 0.75″
H: 1.16″

FEATURES

- Compact Size
- Coils to 48 VDC
- Contacts Rated at 3, 5, or 10 Amps
- Life Expectancy 200,000 Operations
- PC Board Mounting
- UL File #E43203

Contact Arrangement: SPDT (1 Form C)

Contact Rating: Noninductive load

Light Duty: Max. switched power: 90 W or 360 VA
Max. switched current: 3 Amps
Max. switched voltage: 150 VDC or VAC

Medium Duty: Max. switched power: 150 W or 600 VA
Max. switched current: 5 Amps
Max. switched voltage: 150 VDC or VAC

Heavy Duty: Max. switched power: 280 W or 1200 VA
Max. switched current: 10 Amps
Max. switched voltage: 150 VDC or VAC

Contact Material: Light Duty: Silver-Nickel, gold plated
Medium Duty: Silver-Nickel alloy
Heavy Duty: Silver-Nickel alloy

Operate Time: 20 ms at nominal coil voltage (typical)

Release Time: 20 ms at nominal coil voltage (typical)

Dielectric Strength: 1500 Vrms; 750 Vrms contact to contact

Coil Power

At Pick Up Voltage (typical): Light and Medium Duty: 70 mW
Heavy Duty: 150 mW

Max. Continuous Dissipation: 2 W at 20°C (68°F) ambient

Life Expectancy: Mechanical: 5 million operation
Electrical:
Light Duty: $2x10^5$ @ 3 A, 28 VDC/120 VAC
Medium Duty: $2x10^5$ @ 5 A, 28 VDC/120 VAC
Heavy Duty: $2x10^5$ @ 10 A, 28 VDC/120 VAC

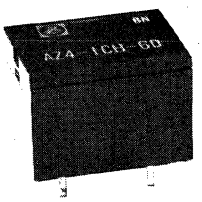
SERIES AZ 4

SPDT Up to 5 Amp Contacts



L: 0.866″
W: 0.635″
H: 0.640″

FEATURES

- Subminiature Size
- DC Coils to 48 VDC
- PC Board Terminals
- Extremely Low Cost
- 3 and 5 Amp Contacts
- Rugged Construction for High Reliability
- UL File #E44211; CSA File #LR36664

Contact Arrangement: SPDT (1 Form C)

Contact Rating: Noninductive load

Light Duty: Max. switched power: 90 W or 360 VA
Max. switched current: 3 Amps
Max. switched voltage: 60 VDC or 250 VAC

Heavy Duty: Max. switched power: 150 W or 600 VA
Max. switched current: 5 Amps
Max. switched voltage: 60 VDC or 250 VAC

Contact Material: Light Duty: Silver Alloy
Heavy Duty: Silver cadmium oxide

Life Expectancy: Mechanical: 10 million operations
Electrical: 10^5 operations at rated load

Contact Resistance (typical): 50 milliohms initially

Operate Time: 6 ms at nominal coil voltage (typical)

Release Time: 2 ms at nominal coil voltage (typical)

Dielectric Strength: Contact to contact: 750 Vrms
Contact to coil: 1500 Vrms

Coil Power

At Pick Up Voltage (typical): 230 mW

Max. Continuous Dissipation: 1.6 W @ 20°C (68°F) ambient

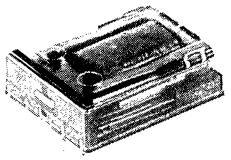
DPDT, 4PDT Dry Circuit to 2 Amp Contacts

2 POLE
L: 1.200″
W: 0.826″
H: 0.458″
4 POLE
L: 1.200″
W: 0.965″
H: 0.458″



FEATURES

- Low Profile For Compact Board Spacing
- DC Coils to 48 VDC
- Life Expectancy to 100 Million Operations
- Standard PC 0.2″ Grid Spacing
- Contact Resistance Less Than 50 Millioms
- Welded Bifurcated Contacts
- Both Form C and Form D Contacts Available
- Epoxy Sealed "Process-Proof" Version Available
- UL File #E43203; CSA File #LR36664
- Meets FCC 1500V Surge Requirement

Contact Arrangement: DPDT (2 Form C) bifurcated
4PDT (4 Form C) bifurcated
Form D also available

Contact Rating: Noninductive load — Form C contact
2 Amp @ 30 VDC
0.5 Amp @ 125 VAC

Contact Material: Fine silver, gold-clad
Other material available upon request

Life Expectancy: Mechanical: 100 million operations

Electrical:	Unsealed	Sealed
1 A @ 26 VDC	$5x10^5$ ops	10^6 ops
2 A @ 26 VDC	10^6 ops	$2x10^5$ ops

Contact Resistance: 50 milliohms initially
200 milliohms at end of life

Operate Time: 10 ms at nominal coil voltage (typical)

Release Time: 4 ms at nominal coil voltage (typical)

Dielectric Strength (initial): 1000 Vrms; 1000 Vrms across contact gap; 1500 Vrms contact to coil

Coil Power

At Pick Up Voltage (typical): 2 pole: 190 mW
4 pole: 310 mW

Max. Continuous Dissipation: 1.6 W @ 20°C (68°F) ambient
1.2 W @ 40°C (105°F) ambient

DPDT, Up to 2 Amps Bifurcated Contact

DIP PACKAGE
L: 0.820″
W: 0.420″
H: 0.455″

FEATURES

- Low Profile for Compact Board Spacing
- DC Coils to 48 VDC
- Life Expectancy to 10 Million Operations
- Standard PC 0.1″ Grid Terminal Spacing
- Fits Standard 16 Pin IC Socket
- Epoxy Sealed for Automatic Wave Soldering and Cleaning

Contact Arrangement: DPDT (2 Form C)
Bifurcated Contact

Contact Rating: Noninductive load
Max. switched power: 30 W or 60 VA
Max. switched current: 2 Amps
Max. switched voltage: 150 VDC or VAC

Contact Material: Silver alloy, gold plated
Silver palladium, gold plated upon request

Life Expectancy: Mechanical: 10 million operations
Electrical: $5x10^5$ @ 1 A, 30 VDC
$2x10^5$ @ 0.5 A, 120 VAC

Dielectric Strength (initial): 1200 Vrms; 500 Vrms between open contacts

Contact Resistance (typical): 50 milliohms initially
200 milliohms at end of life

Operate Time: 5 ms at nominal coil voltage (typical)

Release Time: 2 ms at nominal coil voltage (typical with no coil suppression)

Coil Power

At Pick Up Voltage (typical): 250 mW

Max. Continuous Dissipation: 1.05 mW @ 20°C (68°F) ambient
0.84 W @ 40°C (105°F) ambient

Temperature Rise: 95°C per Watt (typical)

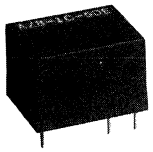
SERIES AZ 8

Epoxy Sealed SPDT Up to 6 Amps

L: 0.83″
W: 0.63″
H: 0.56″



FEATURES

- Subminiature Size
- Coils to 48 VDC
- Epoxy Sealed for Automatic Wave Soldering
- Contacts Rated at 3 or 6 Amps
- Life Expectancy to 20 Million Operations
- Extremely Low Cost
- UL File #E44211; CSA File #LR36664
- Suitable for Class B Applications

Contact Arrangement: SPDT (1 Form C)

Contact Rating: Resistive load

Light Duty: Max. switched power: 100 W or 600 VA
Max. switched current: 3 Amps
Max. switched voltage: 30 VDC/300 VAC
U.L. Rating: 2 A @ 28 VDC or 120/300 VAC; ⅛ HP @ 120 VAC; Standard Pilot Duty @ 120/240 VAC

Heavy Duty: Max. switched power: 170 W or 1800 VA
Max. switched current: 6 amps
Max. switched voltage: 30 VDC/300 VAC
U.L. Rating: 6 A @ 28 VDC or 120/300 VAC; ⅛ HP @ 120 VAC; Standard Pilot Duty @ 120/240 VAC

Contact Material: Light Duty: Fine silver, gold plated
Heavy Duty: Silver nickel, gold plated

Life Expectancy: Mechanical: 20 million operations
Electrical:
Light Duty: $1x10^5$ — 3 A 120 VAC
$5x10^5$ — 3 A 24 VDC
Heavy Duty: $1x10^5$ — 6 A 24 VDC or 120 VAC

Operate Time: 5 ms at nominal coil voltage (typical)

Release Time: 3 ms at nominal coil voltage (typical with no coil suppression)

Dielectric Strength: 750 Vrms contact to contact
2000 Vrms contact to coil

Coil Power
At Pick Up Voltage (typical): 210 mW
Max. Continuous Dissipation: 1.5 W @ 20°C (68°F) ambient
Temperature Rise: 75°C per Watt (typical)

SERIES AZ 2530

Epoxy Sealed Dry Nitrogen Filled SPDT
Low Level to 2 Amp Contacts

L: 1.090″
W: 0.593″
H: 0.445″

FEATURES

- Airtight Seal for Automatic Wave Soldering and Cleaning
- Punch Out Tab Provides "breathing" Hole After Cleaning
- Welded Return Spring Stabilizes Contact Resistance
- Low Profile for Compact Board Spacing
- DC Coils to 48 VDC
- Life Expectancy to 10 Million Operations
- Standard PC 0.1″ Grid Terminal Spacing
- UL File #E43203; CSA File #LR36664

Contact Arrangement: SPDT (1 Form C)

Contact Rating: Noninductive load

Light Duty: Fine silver gold plated
1 Amp @ 26 VDC
0.5 Amp @ 115 VAC

Medium Duty: Silver cadmium oxide
2 Amp @ 26 VDC
1 Amp @ 115 VAC

Life Expectancy: Mechanical: 10 million operations
Electrical: $1x10^6$ — 1 A 26 VDC

Contact Resistance: 50 milliohms max. initially

Operate Time: 5 ms at nominal coil voltage (typical)

Release Time: 6 ms at nominal coil voltage (typical)

Dielectric Strength: Contact to contact: 500 Vrms
Contact to coil: 500 Vrms

Coil Power
Sensitive type: 80 mW
At Pick Up Voltage (typical): Light duty type: 125 mW
Medium duty type: 250 mW
Max. Continuous Dissipation: 1.6 W @ 20°C (68°F) ambient
1.2 W @ 40°C (105°F) ambient
Temperature Rise: 55°C (130°F) per watt (typical)

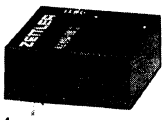
"It's a better relay"

AMERICAN ZETTLER, INC.
16881 Hale Avenue, Irvine, California 92714 (714) 540-4190 • Telex 67-8472

SERIES AZ 690

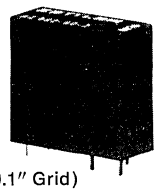
Single Pole — 10 Amp
High Dielectric — 4000 Vrms
Complete International Approvals

L: 1.100″
W: 1.024″
H: 0.441″



AZ 694

L: 1.100″
W: 0.480″
H: 1.040″



AZ 692
AZ 693 (0.1″ Grid)

FEATURES

- Isolation Spacing Greater Than 8mm
- Dielectric Strength 4000 Vrms Coil to Contact
- Approvals/Standards Include UL, CSA, VDE, IEC, CEE, SEMKO
- Single Pole — Forms A, B, C Available
- 10 Amp Switching
- Life Expectancy to 30 Million Operations
- Thinpak Version Less Than .500″ High
- Slimpak™ Version Saves Board Space
- Epoxy Sealed Version for Automatic Wave Soldering and Cleaning
- UL File #E44211; CSA File #LR36664; VDE4120-4940-4001/A1

Contact Arrangement: SPDT (1 Form C); other forms optional

Contact Rating: Resistive load
Max. switched power: 300 W or 2000 VA
Max. switched current: 10 Amp, 64 Amp for 2 msec
Max. switched voltage: 150 VDC or 250 VAC
U.L. Rating: 10 Amp @ 24 VDC or 115 VAC
¼ HP 120 VAC Motor Load

Contact Material: Silver cadmium oxide

Life Expectancy: Mechanical: 30 million operations
Electrical: 10^5 @ 10 Amp, 30 VDC
$2x10^5$ @ 10 Amp, 115 VAC or 8 Amp 220 VAC

Contact Resistance: 100 milliohms max. initially
200 milliohms at end of life

Operate Time: 6 ms at nominal coil voltage (typical)

Release Time: 4 ms at nominal coil voltage (typical wtih no coil suppression)

Coil Power
At Pick Up Voltage (typical): 350 mW
Max. Continuous Dissipation: 1.9 W @ 20°C (68°F) ambient
1.45 W @ 40°C (105°F) ambient
Temperature Rise: 42°C (108°F) per Watt (typical)
Coil Temperature: Max. 105°C (220°F)

Dielectric Strength (initial): 4000 Vrms Coil to Contact
1000 Vrms between open contact

FEATURES

- International Standard Type
- Occupies Less Than One Cubic Inch of Space
- Life Expectancy More Than 100 Million Operations
- Coils to 115V — DC or AC
- Current and Voltage Sensitive Coils Available
- Dry Circuit, 2 Amp, 5 Amp, or 10 Amp Contacts
- Form A, B, C and D Contacts Available
- Solder/plug in or PC Terminals
- Hydrogen Annealed Iron Magnetic Circuit
- Molded Comb Eliminates Phenolic Dust Inside Relay
- Balanced Spring-held Armature Allows Dependable Operation in Any Position
- Round Core and Larger Coil Volume Provide More Pull Force
- UL File #E43203; CSA File #LR36664; VDE 0110 Gr. A

Contact Arrangement:	2, 4, or 6 Form C; 6 or 8 Form A or B; 2 or 4 Form D available
Contact Rating:	Noninductive load — U.L. Rating
Code: WL	Fine silver, gold plated 3 Amp at 26 VDC or 115 VAC
Code: WH	Silver cadmium oxide, gold plated 7.5 Amp at 26 VDC or 115 VAC
Code: 10L, 40L	Fine silver, gold plated 2 Amp at 26 VDC; 1 Amp at 115 VAC
Life Expectancy:	Mechanical operations: 100 million Electrical: $1x10^6$ at 2 A, 30 VDC or 120 VAC (Code WL) $1x10^5$ at 5 A, 30 VDC or 120 VAC (Code WH)
Contact Resistance:	50 milliohms initially (typical)
Operate Time (typical):	10 ms at nom. coil voltage
Release Time (typical):	3 ms at nom. coil voltage with no coil suppression
Dielectric Strength (initial):	1000 Vrms between all points 1500 Vrms versions available
Coil Power	
At Pick Up Power (typical):	40 mW per pole (sensitive version) 25 mW per pole available
Max. Continuous Dissipation:	2.6 W @ 20°C (68°F) ambient 2.0 W @ 40°C (105°F) ambient
Temperature Rise:	30°C (86°F) per Watt (typical)

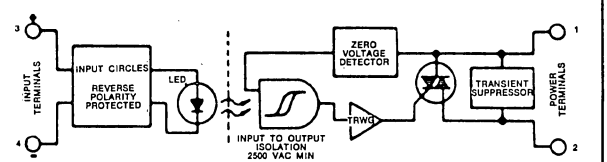
GENERAL PURPOSE AC SOLID STATE RELAYS OPTO-ISOLATED

SCHEMATIC DIAGRAM



SOLID STATE RELAY SPECIFICATIONS:

1. POWER CIRCUIT SPECIFICATION — Isolation: Input to output and input to base plate 2500 vrms, 10^{10} ohms DC. **Peak Repetitive Voltage:** 250 V. **Operating Voltage Range:** 24-140 VAC. **Contact Voltage Drop:** 1.3 vrms nominal, 1-6 vrms max. over temperature range: **Turn On Time:** ½ cycle maximum, zero voltage. **Turn Off Time:** ½ cycle maximum: zero current. **DV/DT Off State:** 200 v/microsecond. **DV/DT Commutating.** Snubbed for motor starting loads. **Off State Leakage:** 6 ma. maximum over operating temperature range. I^2t rating for period of 8.3 ms (for fusing purpose).

2. DC CONTROL VOLTAGE SPECIFICATION — Maximum Control Input: 32 V. **Turn On Voltage:** 4 V maximum over operating temperature range. **Turn On Current:** 3.5 ma. maximum over temperature range. **Turn Off Voltage:** 1 V minimum. **Maximum Reverse Polarity Voltage:** 60 V.

3. TEMPERATURE RATING — Operating Temperature Range: −40° to 100°C. **Maximum Base Plate Temperature at Rated Current:** OTM Series; 60°C. **Maximum Case Temperature at Rated Current:** ALL OTHERS; 75°C.

4. MECHANICAL — Physical Configuration: See inside date sheet. **Case:** Epoxy encapsulated for environmental protection.

The OPTOSWITCH™ general purpose AC solid state relays have been specifically designed to meet or exceed commercial requirements. Applied Electro Technology Int. has a long history of manufacturing aerospace and military high reliability solid state relays and this high quality experience has influenced a new design in solid state relays with stringent manufacturing and testing.

Use these relays in all your commercial applications such as copiers, instruments, controls, gas pumps, microprocessor controllers, automated machinery, etc.

The OPTOSWITCH™ totally solid state AC relays are total encapsulated and especially recommended for harsh industrial environments where high shock or severe temperature excursions are encountered. All inputs are opto-isolated and turn-on is synchronized with load voltage zero crossing to minimize radio frequency interference.

- Optical isolation between control and load circuits.
- Logic compatible input current level.
- Zero voltage turn-on for reduced EMI.
- High transient immunity.
- Integrated heat-sinks for greater load capacity.

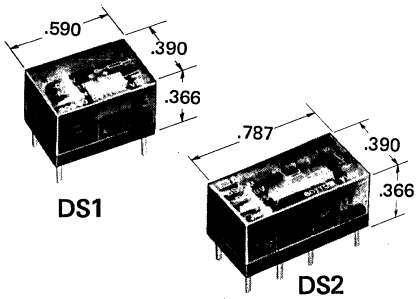
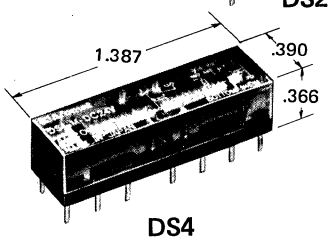
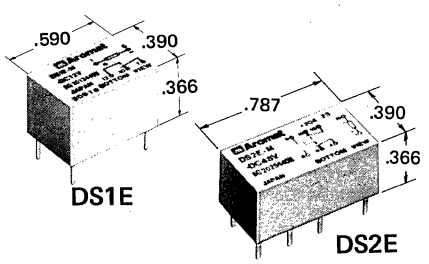
NEW Highly Sensitive 1,500 V FCC Surge Withstanding Miniature Relays DS-RELAYS

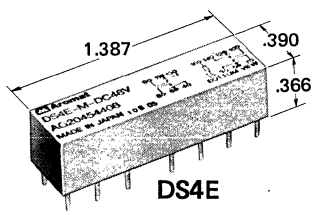
Relay Efficiency





DSE Amber Relays





- High sensitivity
- High switching capacity
- High breakdown voltage —1,500V FCC surge between open contacts, 1,000VAC between open contacts
- DIP terminal arrangement
- Latching types available

* FCC (Federal Communication Commission) requests following standard as Breakdown Voltage specification

More than 30,000,000 pcs. in use all over the world

- Low profile – stands only .402 inches high
  Ideal for high packaging density
- High sensitivity – minimum operating power
  NF2/150mW, NF4/240mW
- Variety of available lines –
  Amber Sealed types
  MBB (Form D) contact types
  High breakdown voltage types for transient protection – 1,000V rms between open contacts, contact sets
- Gold capped silver palladium contacts available.

Dave Robson

"Tell me your relay application and I'll tell you how Bosch Mini-Giants® can help."

Whether it's automobiles or main frame computers, alarm systems or 100-ton cranes, Robert Bosch speaks your language on any of dozens of relay applications. So let's talk.

Whether it's plug-in relays (30 amp; 6, 12 and 24 VDC) or PCBs (15 or 30 amp), let's talk.

Whether your main concern is quality (automated production keeps Mini-Giant® Relays quality consistent) or price (we'll match any of our competitors), let's talk.

Whether delivery is needed in 24 days or 24 hours, let's talk.

I'm **Dave Robson.** For a free brochure on Robert Bosch Mini-Giant® Relays just phone me or my colleague **Rich Inglot** at **(312) 865-5301.** Or write us at:

CLARE Mercury-Wetted Contact Relays

GENERAL INSTRUMENT

RELAY TYPE	TERMINAL TYPE/GRID	CONTACT FORMS AVAILABLE	DESCRIPTION
HGJM **HGJ2MT** 	1.400/1.200 x .100 staggered	1C 2C (Break-Before-Make)	Highest speed mercury-wetted contact relay. Life at 2A, 100VA rated load: 20 billion operations with contact protection. Low noise, high repetition rate. Stable at 200 Hz.
HGWM **HGW2MT** 	1.20 x .100	1C 2C	Compact package mercury-wetted relay. Life at rated load: 20 billion operations. Same characteristics as HGJM.
HGSM **HGS2MT** 	1.800/1.500 x .200 staggered	1C 1D 2C 2D	Sensitive mercury-wetted relay. Life at 2A rated load: 20 billion operations with contact protection. 120 Hz repetition rate.
HGRM **HGR2MT** **HGSR** 	1.400/1.200 x .100 staggered	1C 1D 2C 2D	Small mercury-wetted relay. Life at rated load: 20 billion operations with contact protection. Same contact characteristics of HGSM.
HGM **HG2M** 	3.000/2.400 x .200 staggered	1D 2D (Make-Before-Break)	High current (5.0A, 250VA) mercury-wetted module. Life at rated load: 20 billion operations with contact protection. 80 Hz maximum repetition rate.
HG **HGP** **HG2A** **HG3A** **HG4A** 	8, 11 and 14 Pin Plugs	1D 2D 3D 4D	Heavy duty (5.0A, 250VA) mercury-wetted plug-in relays. Life at rated load: 20 billion operations with contact protection.
HGS	8 Pin Octal Plug	1C 1D	Sensitive mercury-wetted plug-in relay. Life at rated load: 20 billion operations with contact protection. 2A, 100VA contact rating.
851	1.300 x .100	1A 2A 4A (Normally Open)	Mercury-wetted reed, epoxy molded. End lead construction. Life at rated load: 1 billion operations. .5A, 50VA contact rating.
HRB 	1.00 x .150	1A thru 5A	Mercury-wetted reed, metal cover. Standard grid spacing. Life at rated load: 1 billion operations. .5A, 50VA contact rating.
HRM 	.800 x .150	1A	Subminiature form A module for PCB mounting. Life at rated load: 1 billion operations with contact protection. .5A, 50VA contact rating.

CLARE DIVISION, 3101 W. Pratt Avenue, Chicago, Illinois 60645 • 312/262-7700

CLARE Dry Reed Relays

GENERAL INSTRUMENT

RELAY TYPE	TERMINAL TYPE/GRID	CONTACT FORMS AVAILABLE	NOMINAL VOLTAGE	DESCRIPTION
DYAD PRMA	.300 x .100 Dual-in-line Package (DIP)	Form A (1 & 2) Form B (1 only)	5 Vdc 12 Vdc 24 Vdc	The new bifurcated DYAD® series yields improvements in speed and contact life reliability. Life at signal load: 250 million operations.
 PRMA	.300 x .100 Dual-in-line Package (DIP)	Form A (1 & 2) Form B (1 only) Form C (1 only)	5 Vdc 12 Vdc 24 Vdc	Molded construction. Diode and electrostatic shield options. Life at rated load: 5 million operations.
 PRME	.300 x .100 Dual-In-Line Package (DIP)	Form A (1 only)	5 Vdc 12 Vdc 24 Vdc	Low profile molded construction. Available with diode and/or shield. Life rated load: 5 million operations.
MRB/922	1.00 x .100 1.00 x .150	Form A (1 to 6) Form B (1 & 2) Form A/B (1 & 2) Form C (1 to 4) Form AL (1 & 2)	5 Vdc 6 Vdc 12 Vdc 24 Vdc	Industry standard in "microreed" size reed relays. Metal cover and versatile design. Life at rated load: 10 million operations.
 MRBT	1.00 x 0.10	Form A (2 & 3)	5 Vdc 12 Vdc 15 Vdc	Microreed relay designed to minimize thermal voltage errors in low-level circuits. Life at rated load: 10 million operations.
 951	1.00 x .100	Form A (1, 2 & 4) 3-pole and 5-pole available.	5 Vdc 12 Vdc 24 Vdc	Epoxy molded equivalent of MRB metal covered relay. Rugged lead frame construction. Life at rated load: 5 million operations.
 925	1.00 x .100	Form A (1 & 2) Form B (1 only)	5/6 Vdc 12 Vdc 24 Vdc	Open construction. Life at rated load: 10 million operations.
 PRB	.700 x .100	Form A (1 & 2) Form B (1 only)	5 Vdc 6 Vdc 12 Vdc 24 Vdc	Magnetic shielding option with a ferrous cover in a high density package design. Life at rated load: 5 million operations.
 CRTN	2.50 x .218	Form A (1 to 6) 7 to 12 poles available Form B (1 & 2) Form A/B (1 & 2) Form AL (1 & 2)	6 Vdc 12 Vdc 24 Vdc 48 Vdc	Industry standard in large size reed relays. Life at rated load: 20 million operations.

CLARE DIVISION, 3101 W. Pratt Avenue, Chicago, Illinois 60645 • 312/262-7700

CLARE Electromechanical Relays

GENERAL INSTRUMENT

RELAY TYPE	TERMINAL TYPE/GRID	CONTACT FORMS AVAILABLE	NOMINAL VOLTAGE	DESCRIPTION
 LM	Dual-in-line Package (DIP)	(Break-Before-Make) 1 Form C 2 Form C	3 Vdc 5 Vdc 6 Vdc 12 Vdc 24 Vdc 48 Vdc	Dual-in-line subminiature package for automatic PCB insertion. Epoxy sealed construction for automatic wave soldering and cleaning. Breakaway breather hole allows lower relay operating temperature. Life at full rated load: 500 thousand operations.
 555	1.00 x .100	(Break-Before-Make) 2 Form C (Make-Before-Break) 2 Form D	5 Vdc 6 Vdc 12 Vdc 24 Vdc 48 Vdc	Bifurcated contacts insure reliable low level to 1 ampere switching. Typical coil power dissipation only 290 milliwatts. Submersible sealed construction simplifies wave soldering and cleaning operations. Breakaway breather hole allows lower relay operating temperature. Life at full rate load: 1 million operations.
 LA	.100 In Line	4 Form C	6 Vdc 12 Vdc 24 Vdc 30 Vdc 48 Vdc	Low cost miniature relays offer high switching capacity and versatility for their size. Bifurcated contacts switch from low level to 2 ampere full rated loads. Life at rated load: 100 thousand operations.
 LB, LBP	.100 In Line	6 Form C	6 Vdc 12 Vdc 15 Vdc 18 Vdc 24 Vdc 30 Vdc 36 Vdc 48 Vdc	Miniature relays offer high switching capacity and versatility at low cost. bifurcated contacts switch from low level to 2 ampere full rated loads. LB series are designed for direct plug into socket mounting. Life at rated load: 100 thousand operations.

CLARE CIRCUIT PROTECTION

Surge Arrester Selection Guide

PRODUCT	VOLTAGE RATINGS	APPROXIMATE SIZE AND MOUNTING METHOD	PHYSICAL CONSTRUCTION	SPECIAL FEATURES
Comgap (CG)	75V-1000V DC	.265" L x .380" Dia. Solder Leads .892" L P/C Mtg. Mtg. Clips for Units w/o Leads	Ceramic/Metal	Small Size Rugged Ceramic Construction Low Capacitance < 1.5 pF High Peak Current Capability > 10 kA
Uni-Imp® (UBD, UGT, UBT)	550V-20kV DC	2.20" L x .560" Dia. Solder Lugs	Glass/Metal	Ultra Fast Protection No Overshoot (DC to 200kV/μS) Life Thousands of Operations
Spark Gaps (SB & SG)	400V-40kV DC	3.562" L x 1.202" Dia. Solder Lugs Ferruled Ends for Clip Mtg.	Glass/Metal	Sub-Microsecond Responsive Time Electrical Energy Transfer DC Overvoltage Protection
Triggered Spark Gaps (TA & TB)	1.0kV-25kV DC	3/4" H x 21/22" Dia. Solder Lugs 2.10" H x 2.82" Dia. Stud Screw Mtg.	Ceramic/Metal	Command Energy Switching DC Overvoltage Protection Rugged Construction

MINIGLOSSARY ELECTROMECHANICAL RELAYS

RELAYS

Hybrid: Isolated input and output either with a solid-state input and an electromechanical output or vice versa. Typically a reed switch is used to trigger a solid-state output or a solid-state amplifier is used to trigger an electromechanical relay.

Differential: Have multiple windings to function when voltage, current and/or power difference reaches a specific level or value.

Close-differential: The dropout value is specified close to the pickup value.

Frequency sensitive: Operates at a set frequency or within specific frequency bands. A resonant reed, for example.

Hermetically sealed: Totally sealed by glass-to-metal or metal-to-metal seals to ensure very low rates of gas leakage over long time periods.

Encapsulated: Imbedded in a suitable potting compound.

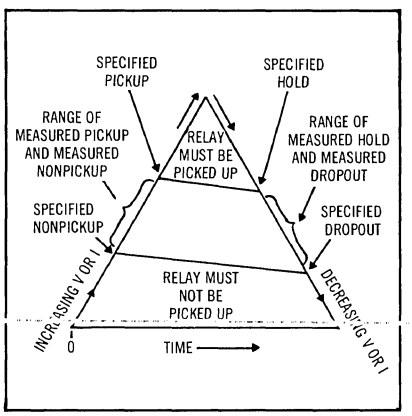
Sealed: Enclosed in a relatively air-tight cover. (Not the same as hermetically sealed.)

Covered: Unsealed metal or plastic enclosure or housing.

CONTACTS

Dry circuit: contacts that carry current but do not open or close during energizing of the load circuit. Often wrongly used in reference to low level contacts.

Low Level: Contacts controlling relatively low voltages and low currents. Generally below 5 Vdc and 10mA.



OPERATING CHARACTERISTICS

Measured dropout: The value at which all contacts restore to their unoperated position as current or voltage decreases.

Specified dropout: The value at or *above* which all contacts *must* restore to their unoperated position as voltage or current is decreased.

Specified hold: The value that *must* be reached before any contact change occurs as voltage or current is decreased on an operated relay.

Specified nonpickup: The value that *must* be reached before any contact change occurs as voltage or current decreases on an unoperated relay.

Measured pickup: The value at which all contacts function as voltage or current increases on an unoperated relay.

Specified pickup. The value at or *below* which all contacts *must* function as voltage or current increases on an unoperated relay.

Sensitivity: Specified pickup expressed in watts.

Normal bridging: The make-before-break action between adjacent contacts on relays designed for this purpose.

Abnormal bridging: The undesired closing of contacts caused by a metal bridge or protrusion developed by arcing.

Magnetic freezing: Sticking of the armature to the core as a result of residual magnetism.

TIME

Actuation: The interval from coil energization or de-energization to the functioning of a specified contact.

Initial actuation: The interval from coil energization or de-energization to the *first* closing or opening of a previously open or closed contact.

Final actuation: Sum of initial actuation *and* bounce intervals following an actuation.

Contact bounce: The interval from close or opening of a contact to the end of the bounce of "chatter."

Chatter: See bounce.

Operate: Normally taken as the interval between energization and the opening or closing of the last contact to function not including bounce.

Release: Normally taken as the interval between de-energization and the opening or closing of the last contact to function excluding bounce.

Transfer: The interval between opening a closed contact and closing an open contact of a break-before-make relay.

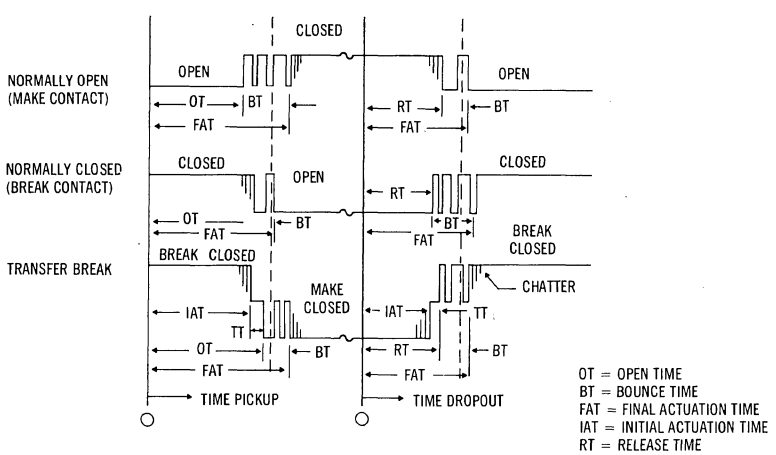


Fig. 2. Typical time vs. current (non-inductive load)

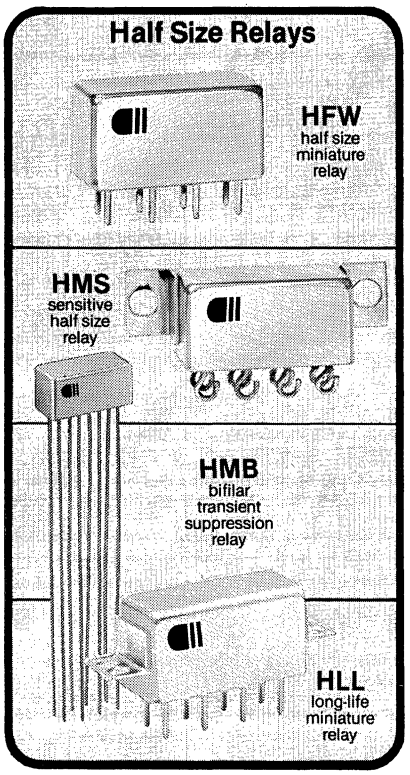
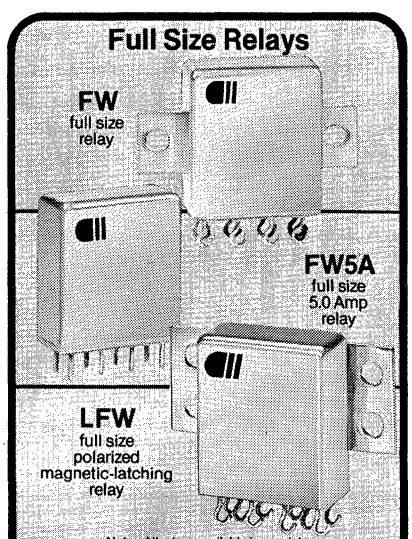
HIGH PERFORMANCE RELAYS from COMMUNICATIONS INSTRUMENTS, INC.

Half Size Relays



Contact Data	Coil Voltage	Features
Contact Arrangements: 1 Form C, 2 Form C, 2 Form B, 2 Form A. Contact rating: low level to 4.0 Amps	5 to 48.0 VDC	• Welded, hermetically sealed enclosures • Low contact resistance • Sensitive version available • Excellent RF switching • Ambient temp rating −65°C to +125°C • Qualified to MIL-R-39016/6 level L&M *(Request Data Sheet HFW-81)*
Contact Arrangements: 1 Form C, 2 Form C, 2 Form B, 2 Form A. Contact rating: low level to 2.0 Amps	5 to 36.0 VDC	• Welded, hermetically sealed enclosures • Low contact resistance • Energy-saving 100/125 milliwatt sensitivity • Excellent RF switching • Ambient temp rating −65°C to +125°C • Qualified to MIL-R-39016/44 level L&M *(Request Data Sheet HMS-83)*
Contact Arrangements: 1 Form C, 2 Form C, 2 Form B, 2 Form A. Contact rating: low level to 3.0 Amps	6 to 32.0 VDC	• Welded, hermetically sealed enclosures • Low contact resistance • Bifilar transient suppression • Excellent RF switching • Ambient temp rating −65°C to +125°C • Qualified to MIL-R-39016/22 level L&M *(Request Data Sheet HMB-83)*
Contact Arrangements: 1 Form C, 2 Form C, 2 Form B, 2 Form A. Contact rating: low level to 2.0 Amps	6 to 26.5 VDC Life: 100 million operations at low level	• Welded, hermetically sealed enclosures • Low contact resistance • Sensitive version available • Excellent RF switching • Ambient temp rating −65°C to +125°C • Shock and vibration resistant *(Request Data Sheet HLL-83)*

Full Size Relays



Contact Arrangements: 1 Form C, 2 Form C, 2 Form B, 2 Form A. Contact rating: low level to 3.0 Amps	6.3 to 110 VDC	• Welded, hermetically sealed enclosures • Low contact resistance • Sensitive version available • Excellent RF switching • Ambient temp rating −65°C to +125°C • Qualified to MIL-R-5757/10 *(Request Data Sheet FW-81)*
Contact Arrangements: 1 Form C, 2 Form C, 2 Form B, 2 Form A. Contact rating: low level to 5.0 Amps	6.3 to 110 VDC	• Welded, hermetically sealed enclosures • Low contact resistance • 5.0 Amp version of FW • Excellent RF switching • Ambient temp rating −65°C to +125°C • Designed to MIL-R-5757 *(Request Data Sheet FW5A-81)*
Contact Arrangements: 1 Form C, 2 Form C, 2 Form B, 2 Form A. Contact rating: low level to 3.0 Amps	3.2 to 110 VDC	• Welded, hermetically sealed enclosures • Low contact resistance • One and two coil operation • Excellent RF switching • Ambient temp rating −65°C to +125°C • Designed to MIL-R-5757/53 *(Request Data Sheet LFW-81)*

Relay	Contact Data	Coil Voltage	Features
MF 1/6th size micro-miniature relay 	Contact Arrangements: 1 Form C, 2 Form C, 2 Form B, 2 Form A. Contact rating: low level to 1.0 Amp	3.4 to 53.0 VDC	• Hermetically sealed enclosures • Low contact resistance • Total volume only .046 cubic inch • Excellent RF switching • Ambient temp rating −65°C to +125°C • Designed to MIL-R-39016/34 *(Request Data Sheet MF-81)*
PF 10 Amp miniature power relay	Contact Arrangements: 1 Form C, 2 Form B, 2 Form A. Contact rating: low level to 10.0 Amps	6.3 to 110 VDC	• Welded, hermetically sealed enclosures • Very low contact resistance • Package volume .72 cubic inch • Excellent RF switching • Ambient temp rating −65°C to +125°C • Designed to MIL-R-5757/23 & 28 *(Request Data Sheet PF-83)*
SF ultra-sensitive relay	Contact Arrangements: 1 Form C, 2 Form C, 2 Form B, 2 Form A. Contact rating: low level to 3.0 Amps	1.8 to 48.0 VDC	• Welded, hermetically sealed enclosures • Low contact resistance • 40 milliwatt sensitivity • Excellent RF switching • Ambient temp rating −65°C to +125°C • Designed to MIL-R-5757/13 *(Request Data Sheet SF-81)*
RD 4 and 6 pole relays	Contact Arrangements: 4 Form C 6 Form C Contact rating: low level to 2.0 Amps	18.0 to 36.0 VDC	• Hermetically sealed enclosures • Low contact resistance • Optional all-welded construction • 100 G shock • Ambient temp rating −65°C to +125°C • Qualified to MIL-R-5757/1 & 7 *(Request Data Sheet RD-83)*

Relay	Contact Data	Coil Voltage	Features
Type 511 GPQ general purpose RF relay 	Contact Arrangements: 2 Form C, 4 Form C, 2 Form D, 4 Form D. Contact rating: low level to 1.0 Amp	5 to 48.0 VDC	• Sealed enclosures • Designed for general purpose RF switching • Sensitive version available • Insulation resistance 50,000 MΩ at 500 VDC • Allows 0.5" center PC board spacing • Low profile. Only .35" height *(Request Data Sheet 511/GPQ-83)*
Telephone Relays Type C, Type J, Type R 	Contact Arrangements: Long frame: up to 8 Form C Med. frame: up to 8 Form C Short frame: up to 4 Form C Contact rating: low level to 10.0 Amps	6 to 250 VDC	• Optional hermetic sealing • Ac or dc operation • Fast operate and fast release • Variety of accessories • Ambient temp rating −55°C to +85°C • Custom designs available *(Request Catalog 502)*
Stepping Switches Types 20 & 26, Types 210 & 211 	Point variations: 10 to 52 point operation Contact rating: 0.1 Amp at 115 VAC or 30 VDC resistive Carry: 3.0 Amps	6 to 110 VDC	• Optional sealing • Insulation resistance $10^9\Omega$ at 500 VDC • Fast operate and release times • Variety of switch mounting accessories • Operating temperature −0°C to +85°C • Custom designed models available *(Request Catalog 601)*

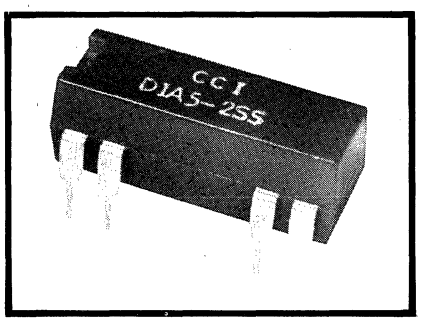
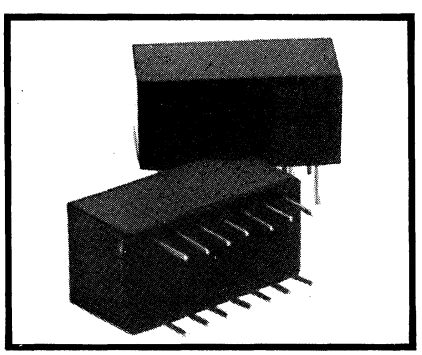
HP (Also 101, 201, 301, & 401 Series)

LOW PROFILE REED RELAY, MECHANICAL & ELECTRICAL REPLACEMENT FOR IBM 766 SERIES PLUG-IN, REPLACE REEDS, NO TOOLS-NO SOLDERING

"D" SERIES



Introducing our "D" series, fully moulded D.I.P. compatible relay.



6 Form A, IC Compatible, .4W x .43H x .8L

SPECIAL DESIGNS

In view of the difficulty in offering a product line that is complete enough to cover every application and physical layout, Computer Components, Inc. maintains special engineering and design facilities to provide the project or design engineer with REED RELAYS specifically tailored to his particular requirements.

COTO CORPORATION

REED RE

HIGH VOLTAGE, MERCURY-WETTED, LONG-LI
MINIATURE, ULTRA-LOW THERMAL EMF AND

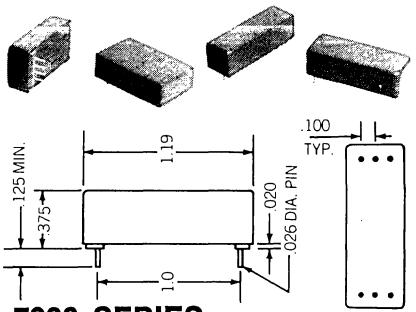
4500

ONE BILLION LIFETIMES!

COTO reed relays have been life tested up to 1,000,000 operations. This assures you of complete product integrity in your most critical designs.

Each and every COTO reed relay is triple-tested in all operating parameters prior to shipment. You can depend absolutely on COTO quality and reliability.

COTO offers a wide variety of reed relays to meet every requirement.



7000 SERIES

7000 — Miniature series available in three types: Dry Standard (7100); Mercury Wetted (7200) and High Voltage (7300). Encapsulated in a magnetically shielding steel shell, epoxy coated. 5, 12 or 24 VDC.

Dry Std.	HG Wet	High Volt	Contact Form	Package Width
7101	7201	7301	1A	.410
7102	7202	7302	2A	.500

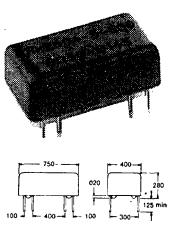
7104	7204	7304	4A	.760
7121			1B*	.500
7122			2B*	.660
7141			1C	.410
7142			2C	.660
7143			3C	.760
7150			1AL*	.500
7160			1A/1B†	.760

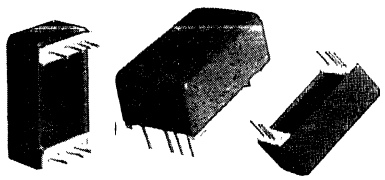
* Polarized. † Make before break not guaranteed.



2600 SERIES

2600 — Highly reliable DIP reed relays designed for versatility. Offered in a wide variety of contact types and coil resistances. Excellent for new designs or to retro-fit lesser quality molded DIP relays. Diode coil suppression available.

Model #	Contact Form	Switch Volt	Switch Current	E.S. Shield
2604	1A	200	0.5A	YES
2610	1C	100	0.2A	NO
2611	1C	100	0.25A	YES
2631	1A Hi-V	250	0.5A	NO
2653	2A	100	0.5A	YES



3200/3400 SERIES

3200/3400 — Low and ultra-low thermal EMF series. Feature 500 nanovolt thermals and 50 nanovolt stability. Fully encapsulated in magnetically shielding steel shell. For scanning low level analog and digital signals, multiplexing, data acquisition and automatic test equipment.

Model #	Contact Form	Thermal EMF Options (Max)
3201	1A	3μV, 1μV, 500nV
3202	2A	5μV, 3μV, 1μV, 500nV
3203	3A	5μV, 3μV, 1μV

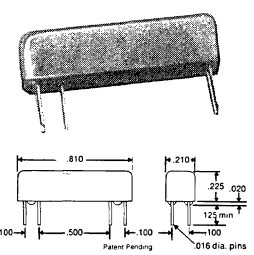
3221	1A Hi-V	5μV, 3μV
3222	2A Hi-V	5μV, 3μV
3402	2A	5μV, 3μV, 1μV, 500nV
3432	2A HG	10μV, 5 μV
3450	3A	5μV, 3μV, 1μV, 500nV
3460	3A	5μV, 3μV, 1μV, 500nV



2200/2900 SERIES

2200/2900 — Microminiature reed relays for maximum versatility and dependability. Encapsulated in epoxy coated magnetically-shielding steel shell. Ideal for switching high-frequency signals. Greater than 10^{12} ohms insulation resistance available.

Model #	Contact Form	Switch Volt	Switch Current	Carry Current
2204	1A Dry	200	0.5A	1.0A
2211	1C Dry	100	0.25A	0.5A

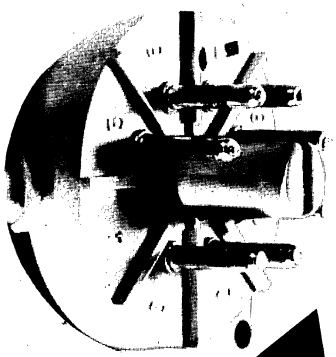
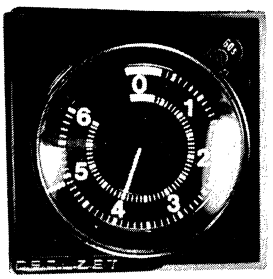
octal Cycle Progress Timer



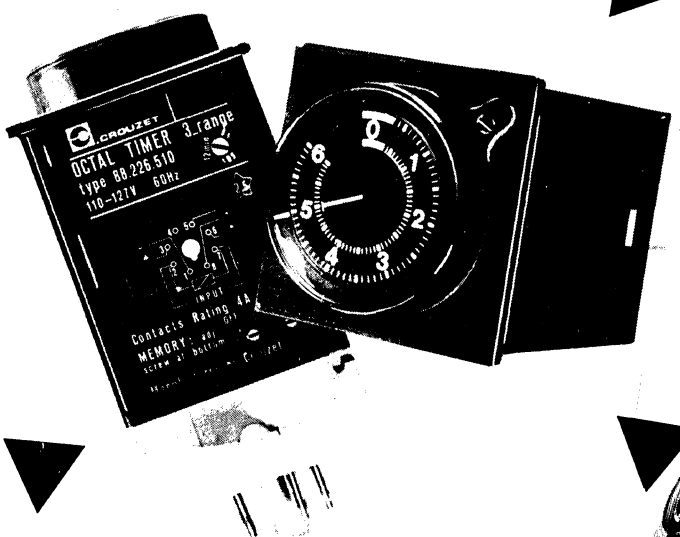
OCTAL PLUG-IN interchangeable with most octal timers



CYCLE PROGRESS shows time remaining in the cycle

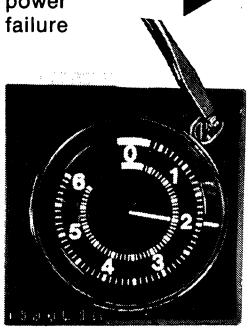
±2% SETTING ACCURACY

MEMORY holds setting during power failure



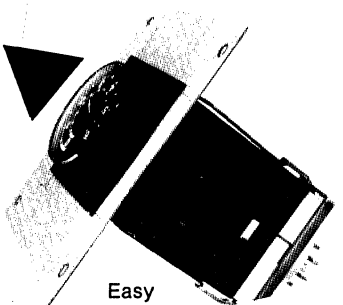
TRANSIENT IMMUNITY built-in

MULTI-FUNCTION on-delay, interval and single shot in one timer!



MULTI-RANGE 2 models cover from 0.3 sec. to 12 hours

OCTAL LOCK prevents module from vibrating out of its socket



Easy **PANEL MOUNT** with no additional hardware

HOW TO ORDER

OCTAL CYCLE PROGRESS TIMER - part no. 88 226.5
(Example - 88 226.5 - 115V 60Hz Model 1)

VOLTAGE	FREQUENCY	TIME RANGES
115V	60Hz	Model 1: 6 sec./60 sec./12 min.
24V	60Hz	Model 2: 6 min./60 min./12 hrs.
240V	60Hz	
220V	50Hz	

CERTIFICATIONS

UL and CSA — Most European standards.

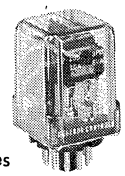
DELTROL RELAYS

BZ Buzzer

L = 1-1/16
W = 1-1/4
H = 7/8

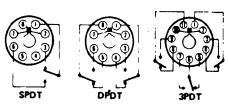
Continuous or intermittent duty buzzer which buzzes when coil is energized. Operated on 50/60 cycle AC voltage. Mounting: No. 6-32 tapped core. Recognized under the Components Program of Underwriters Laboratories, Inc. (File No. E37066). CSA listed (File No. 20690).



105 Series

L = 1-3/8
W = 1-3/8
H = 2

General purpose plug-in relay for continuous duty operation. Plastic cover. Recognized under the Components Program of Underwriters Laboratories, Inc. (File No. E37066).



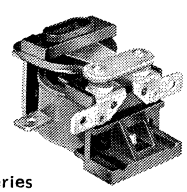
BASE DIAGRAMS FOR 105 SERIES

B-3 HOLD DOWN SPRING
S/N 20171-00

165/166 Series

L = 1-13/32
W = 1-1/2
H = 2-3/16

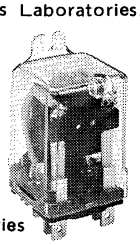
Plastic covered general purpose plug-in relay. Molded nylon coil. Continuous duty operation. Recognized under the Components Program of Underwriters Laboratories, Inc. (File No. E37066). Also CSA Recognized.



170 Series

L = 1-7/8
W = 1-5/8
H = 1-1/4

High current relays for industrial control applications. Molded nylon encapsulated coil is resistant to fungus and moisture. Recognized under the Components Program of Underwriters Laboratories, Inc. (File No. E37066).



275F Series

General purpose relays with plastic dust cover with flange mounting, barrier-type .250" quick-connect terminals and molded-nylon coil. Recognized under the Components Program of Underwriters Laboratories, Inc. (File No. E37066). CSA Recognized.

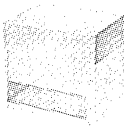
Heavy duty power relay for industrial control applications. Particularly suited for motor controls, heater loads, welder loads, and other power switching applications. Molded nylon coil resists fungus and moisture. Long life, rugged construction. Rating: 25 amps, 1-1/2 hp, 120/240 VAC. Heavy duty screw-type terminals. Mounting: two 3/16" holes on 1-7/8" centers. Listed under the Components Program of Underwriters Laboratories, Inc. (File No. E37066). CSA listed (File No. 20690).

B-5 DUST COVER



L = 5

DELTROL TIME DELAY RELAYS

105TD and 105TD-R SERIES

Time delay relay utilizes a Deltrol DPDT relay combined in a compact, convenient package with electronic delay circuit. The circuit has been designed to provide instant reset if power is removed during the timing cycle without a momentary contact transfer. When rated voltage is applied to the input, the timing cycle begins. At the end of the timing cycle, the DPDT relay transfers and remains in that condition until power is removed from the input. 105TD is recognized under the components program of Underwriter's Laboratories, Inc., file no. E37066.

FEATURES

OCTAL TYPE/PLUG IN TD SERIES
- CMOS CIRCUITRY
- FAST RECYCLE TIME
- VIRTUALLY UNLIMITED DELAYS
- NO FALSE TRANSFER
- CONTINUOUS DUTY CYCLE
- MOST MODELS - UL & CSA
- OCTAL TYPE, PLUG IN BASE
- LEXAN DUST COVER
- FACTORY STOCK

BLADE TYPE/PLUG IN TD SERIES
- CMOS CIRCUITRY
- FAST RECYCLE TIME
- VIRTUALLY UNLIMITED DELAYS
- NO FALSE TRANSFER
- CONTINUOUS DUTY CYCLE
- BLADE TYPE, PLUG IN BASE
- LOW POWER CONSUMPTION
- BOTH AC OR DC TYPES
- FACTORY STOCK

SOLID STATE TS SERIES
- CMOS CIRCUITRY
- NINE (9) OPERATING MODES
- ALL MODELS UL
- TOTALLY SOLID STATE
- DELAYS UP TO 2 HOURS
- SMALL SIZE
- EASY INSTALLATION
- TOTALLY ENCAPSULATED
- FACTORY STOCK

UNITIMER TDU SERIES
- FIELD PROGRAMMABLE
- OPERATES ON AC OR DC VOLTAGES
- FOUR (4) TIMING RANGES
- FIVE (5) OPERATING MODES
- NO FALSE TRANSFER
- LED GLOWS WHEN RELAY IS ENERGIZED
- FACTORY STOCK

DESCRIPTION

OCTAL TYPE/PLUG IN TD SERIES
The TD Time Delay Relay series features a CMOS integrated circuit consisting of an RC oscillator, a binary counter and an output logic that operates an electro-mechanical relay. The delay period is adjustable by varying the oscillator frequency which is represented by the variable control on the enclosure. A dial is silk screened under the control providing a reference point. Extremely fast recycle times, along with high accuracy and repeatability make the TD series ideally suited for all applications encountered in the industry.

BLADE TYPE/PLUG IN TD SERIES
The TD series described here is electrically identical to the octal plug in types. The package and type of termination is the difference. This too features the CMOS integrated circuit providing extremely long delays, fast recycle times, high repeatability and accuracy. As with all other DEI timers, these will not false transfer when power is removed prior to completion of the timing cycle. They plug into standard blade type sockets. Specify QC-11.

SOLID STATE TS SERIES
The TS series offers a solid state addition to the existing broad line of DEI timers. Their small size and low cost provide an inexpensive alternative to the electro-mechanical types. Nine (9) different operations are offered. The totally encapsulated package features CMOS technology, allowing long timing ranges, 100% solid state circuitry, no moving parts to wear, and quick connect terminals for ease of installation. The same fast recycle times and accuracy employed in the other DEI timers make the TS series also ideally suited for all applications encountered in the industry. All models have UL

UNITIMER TDU SERIES
The TDU series Unitimer offers the most versatile single timer available today. 1 model replaces 40 standard devices. 4 wide range delays X 5 most common modes of operation X 2 supply voltages, since it will operate on both AC and DC. The CMOS digital circuitry provides high accuracy, repeatability and fast reset times. The long life, heavy duty relay output is rated to carry currents of 10 amps at 24VDC or 120VAC. All programming is easily accomplished externally by using one or more jumpers between designated base pins -no trap doors to open, no switches to set or disassembly required.

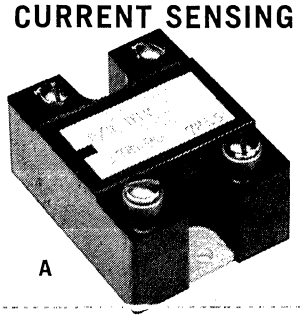
SPECIAL DESIGNS

Douglas Randall makes custom designed relays to solve difficult problems. A few models are shown below to illustrate the variety available. Special molding techniques make it possible to manufacture unusual sizes, shapes and terminal arrangements with low tooling costs.

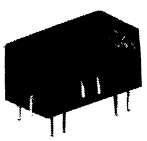
The electrical variations possible with Reed Relays are practically limitless.

Douglas Randall will gladly review your applications and offer rapid engineering and prototype service.

CURRENT SENSING RELAYS



A



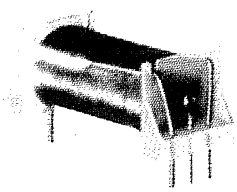
B

Douglas Randall offers a line of relays with coils capable of handling 25 Amperes DC. Contact arrangements can be Form 1A, Form 1B, or Form 1C.

Relay A has a Form B contact which opens at 1 ADC closes at .5 ADC and can operate continuously at 15 ADC coil current. It has screw terminals and can be bolted to a heat sink.

Relay B has standard DIP terminals. It has a Form B contact which opens at 2.3 ADC and closes at 1.7 ADC.

SENSITIVE RELAYS

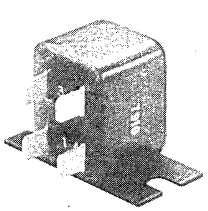


Proper switch selection and tight coil design result in relays operable at lowest coil power. The one shown operates at only 3.5 milliwatts.

VERTICAL MOUNTING

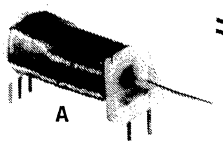
This relay is a miniature molded mercury wetted type .450″ Diameter x 1¼″. High designed for vertical mounting.

SPECIAL HOUSING

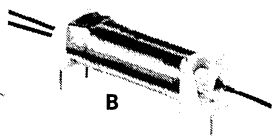


This relay is designed with spade terminals and epoxy molded into a steel case with welded mounting bracket.

HIGH INSULATION RESISTANCE RELAYS



A



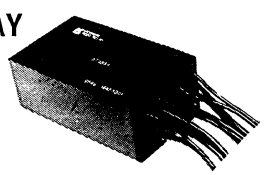
B

Two typical designs are shown above:

A — A miniature reed relay with a floating lead to maintain high IR.

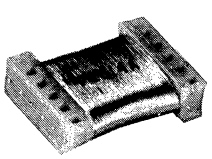
B — This is a relay using Form A and Form B switches timed to provide a Form C (break before make) function with flying leads to maintain 10^{13} ohms. Up to 5 Form A contacts are available @ 10^{13} ohms.

SPECIAL HIGH VOLTAGE RELAY



This relay has three separate coils, each containing a 5,000VDC and a 10,000VDC switch. The package is molded with a flame retardant epoxy and constructed to withstand 18,500VDC between the switches and all other conductors. The relay is 3⅞″ L x 2⅜″ W x 1½″ H.

SNAP-IN RELAYS



This 4 pole relay mounts in Berg-clips, like the Series SI on page 3 Douglas Randall can now duplicate the following discontinued IBM models:

1 — Position: 766040, 766042, 766059, 766060, 766065, 766068 and 766086

2 — Position: 766043, 766044, 766057, 766067, 766072 and 766087

4 — Position: 766046, 766047, 766066, 766071 and 766079

DOUBLE COIL RELAY

This is a special Form 2C relay with two coils. Either coil when energized at 90% nominal voltage must be able to cancel the other coil when energized at 110% nominal voltage. The relay must be able to withstand 600VRMS.

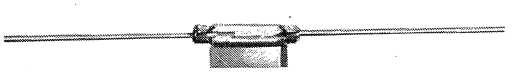
PROXIMITY SWITCHES

Douglas Randall manufactures standard and custom switches to meet many applications, a few of which are illustrated. All proximity switches are tested for operation by external magnets at specified distances.

MINIATURE LATCHING

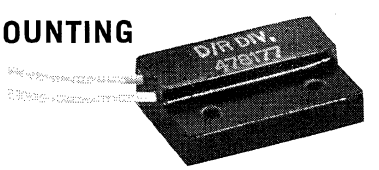


This is a switch and magnet combination shown 3 times actual size. The length, excluding leads is only .350″. This assembly will latch in either the open or closed state when approached by an external magnet.

FORM B

This is a Form B switch and magnet assembly, .7″ L x .150″ Sq. The normally closed switch opens, when approached by an ⅛″ Sq. steel rod.

STEP MOUNTING

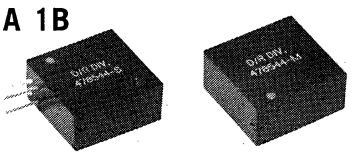


This encapsulated switch is available with Form 1A, Form 1B, Form 1C or Form 2A contacts. It can be supplied with dry reed, mercury wet, high voltage (to 1,000VDC) or high power (to 100VA) contacts. The one shown was designed for low contact resistance and low level switching.

HEAVY DUTY

The proximity switch shown above has heavy duty contacts rated at 100VA. This switch and matching magnet are epoxy encapsulated for heavy duty use on outdoor machinery.

FORM 1A 1B



This is a switch and magnet combination. The switch has Form 1A and Form 1B contacts designed so that one set of contacts is always open as the magnet approaches it.

SOLID STATE RELAYS SERIES K
DC OUTPUT / DC CONTROL SIGNAL

NEW Output to 250 VDC

Douglas Randall Series K are SPST (NO) or (NC) relays which will switch loads of 4, 8 or 12 Amps to 250 VDC. They provide rapid switching and opto-isolation between input and output. The sensitive inputs are compatible with DTL or TTL logic. Arc-free switching makes these relays suitable for hazardous atmospheres.

MODEL NUMBERS

Output Voltage	Current	Model
2-32VDC	4 Amp	K04A
	8 Amp	K08A
	12 Amp	K12A
2-55VDC	4 Amp	K04B
	8 Amp	K08B
	12 Amp	K12B
2-50VDC	6 Amp	K06D

*Inductive loads must be diode suppressed.
† Normally closed add — (NC) K04A-NC.

INPUT SIGNAL DATA

Range	3-32VDC
Must Operate	3VDC
Must Release	1VDC
Input Impedance	1000Ω Min.
Isolation	
Signal to Load	1500V
Signal to Base	1500V
Temperature	−30°C to +80°C

MECHANICAL ARRANGEMENT

See AC output relays on page 7

OUTPUT DATA

Continuous Current	4A, 8A, or 12A
DC Line Voltage	2-32VDC or 2-55VDC
Off State Leakage	2mA DC
Turn On Time	50 Micro Sec.
Turn Off Time	500 Micro Sec.
Voltage Drop @ Rate Current	1.5VDC Max.
Isolation Load to Base	1500V

SIZE:
2¼L x 1¾W x 1⅛H Max.

WEIGHT:
4 Ounces Max.

TERMINATION:
Standard Models —
Control Signal:
6-32 Screws
Output:
8-32 Screws

Special Models can be provided with lead wires or other types of termination in OEM quantities. Consult the factory & see pg.7 for mechanical details.

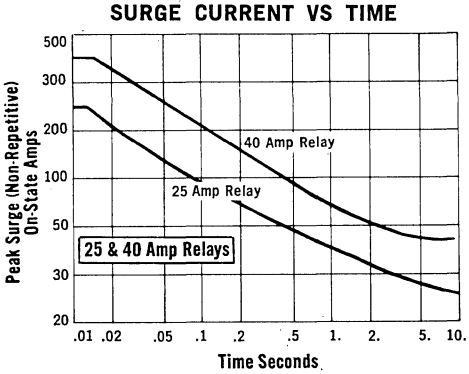
Commutating: 5V/μsec.

Off State Leakage Current:
90/140VAC — 4.5mA Typ.
200/280VAC — 5.5mA Typ.
400/480VAC — 1.5mA Typ.
Isolation Output to Base: 1500V, 10^{10}Ω DC[3]
Contact Form: SPST (NO)[4]

SURGE CURRENT VS TIME



NOTES AND OPTIONS

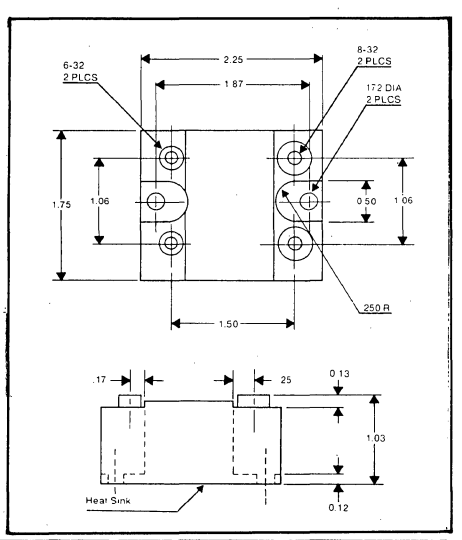
1. Special wide range models can be made which will switch loads from 18V to 140V. These relays can handle either 24VAC or 120VAC loads.
2. 2500VAC isolation between input and output.
3. Form A (SPST-NO) relays are standard. Form B (SPST-NC) switching is optional. Models incorporating this feature are designated by NC. e.g. A40B-NC.
4. All DC models are TTL compatible over the full operating temperature range.
5. All relays except 480VAC Models incorporate an RC snubber network which prevents false operation from transients up to the dv/dt level shown. More severe transients may require additional external protection. We will review your application and recommend the additional protection needed.

MECHANICAL SPECIFICATIONS

Size: 2¼"L x 1¾"W x 1⅛" maximum.

Weight: 4 ounces maximum.

Termination: Standard Models — Control Signal: 6-32 screws. Output: 8-32 screws.
Special Models can be provided with lead wires or other types of termination in OEM quantities. Consult the factory for details.



SPECIAL DESIGNS

Douglas Randall has designed many special solid state relays, such as a polarized, latching, SPDT unit which will switch 12A at 28VDC. We also have the capability of making special package sizes and terminal arrangements for our solid state relays at moderate tool cost. Your inquiries will be reviewed promptly.

Minimum Holding Current	.05A	.05A	.07A	.08A	.09A
AC Line: 90/130 VAC, 200/240 VAC, 250/300 VAC or 400/480 VAC					
Typical Leakage: 90/130 VAC — 10 mA; 200-240 VAC — 7 mA; 250-300 VAC — 6 mA; 400-480 VAC — 3 mA*					

* Models R05D, R10D, R15D, R25D and R40D have no snubbers.

SERIES RD / LOGIC INPUT CONTROL

Series RD provide full control from 0% to 99% when energized by 0-10 VDC or 0-15m ADC signals.

MODEL RD04A AND MODEL RD04B

INPUT SIGNAL	0-10 VDC or 0-15 ma DC[2]	
OUTPUT DATA	RD04A	RD04B
Maximum Current	4A	4A
One Cycle Surge Current	100A	100A
One Second Overload Current	40A	40A
Minimum Holding Current	.05A	.05A
AC Line Voltage	90-130 VAC @ 47-63 Hz	200-240 VAC
Off State Leakage	.01A (typical)	.01A (typical)
Response Time	150 m sec @ 10 VDC (typical)	300 m sec @ 10 VDC
Isolation (Input to Output)	500 VRMS	500 VRMS

Notes: 1. All data is measured at 25°C.
2. The input is not polarity sensitive, but **must be protected against voltages above 10 VDC.**

INPUT MODULES RDA, RDB & RDD

These modules accept 0-10 VDC signals. Their output is connected to the input terminals of Series R — Resistor Modules, which in turn controls loads up to 40 Amp @ 480 VAC. See Fig. 3.

NOMINAL PERCENTAGES OUTPUT VS INPUT RESISTANCE @ 25°C

Constant Current Controls combined with Series R Proportional Controls eliminate current fluctuations regardless of changes in AC voltages or changing load demands. They control loads up to 40 Amps @ 120 or 240 VAC and are available in five ranges listed in the Table.

These controls will maintain uniform current and light intensity for lamp loads as shown in Figures A and B, as well as for resistive loads as shown in Figure C. The Constant Current Controls will also maintain a constant speed in universal and other types of AC motors regardless of changing line voltage.

Constant Current Controls provide overload protection by limiting the current to a preset maximum. This makes them especially useful for keeping motor current at a safe level even under lock or stall rotor conditions (see Figure E).

The controls are encapsulated in small-sized packages for use in harsh environments.

Control Range*	Proportional Control 120 VAC	Proportional Control 240 VAC	Fixed Resistor @ Terminals1-2
2-4 Amp	R05A	R05B	None
4-8 Amp	R10A	R10B	6.65K ±1%
6-12 Amp	R15A	R15B	3.40K ±1%
10-20 Amp	R25A	R25B	1.74K ±1%
16-32 Amp	R40A	R40B	953 ±1%

* The lower end of the control range can be extended by additional loops of wire.

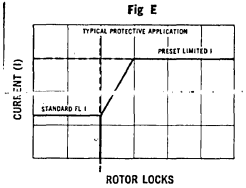
Fig E



TIME BASE PROPORTIONAL DRIVERS

Time based proportional drivers transform any conventional DC-input solid state relay into a proportional controller. The driven relay may be a DC or AC output type. External power is derived from the controlled source. If the driven relay is a zero cross-over device, zero cross-over characteristics are maintained to reduce EMI caused by switching transients. Applications for time base proportional drivers include proportional control of heaters, platers, DC motors, universal wound DC-operated motors and certain AC motors. They are compact, epoxy encapsulated in the standard hockey puck design to withstand harsh environments. Two hole mounting is provided.

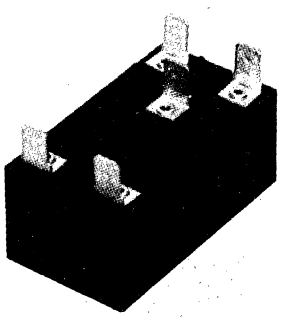
Shown at approximately 70 percent of full value is the load current and PDM control signal voltage of a typical time base proportional control of a zero cross-over relay, such as Douglas Randall D25B.

PDMA accepts external power from a 120 VAC controlled source, PDMB accepts power from a 240 VAC source and PDMD accepts power from a 10-32 VDC source.

Control Range*	Proportional Control 120 VAC	Proportional Control 240 VAC	Fixed Resistor @ Terminals1-2
2-4 Amp	R05A	R05B	None
4-8 Amp	R10A	R10B	6.65K ±1%
6-12 Amp	R15A	R15B	3.40K ±1%
10-20 Amp	R25A	R25B	1.74K ±1%
16-32 Amp	R40A	R40B	953 ±1%

* The lower end of the control range can be extended by additional loops of wire.

PROPORTIONAL CONTROL TRIAC DRIVERS



Douglas Randall Proportional Control Triac Drivers control the firing angle of separate Triacs. They vary output voltages from 0 to 95% to AC loads up to 300 Amps @ 120, 240 or 480 VAC. Five models are available, two which accept 0-10 VDC inputs and three which operate from potentiometer inputs. They are compact epoxy encapsulated in phenolic cases to withstand harsh environments and designed to accept spade or solder termination. Two hole mounting is provided.

Models DPDA and DPDB accept DC inputs, and when connected to a Triac, will **increase the percentage load voltage as the DC input voltage is increased.** They provide 500 mAmps @ 6 V peak to the Triac's gate. Input to output isolation is 500 VRMS.

Models RPDA, RPDB and RPDD accept potentiometer inputs and when connected to a Triac, will **reduce the percentage load voltage as the potentiometer resistance is increased.** They provide 500 mAmps @ 6 V peak to the Triac's gate. There is no isolation between input and output.

Model	Input	Output
DPDA	0-10 VDC*	120 VAC
DPDB	0-10 VDC*	240 VAC
RPDA	Potentiometer 1W, 150 KΩ	120 VAC
RPDB	Potentiometer ½W, 1 MegΩ	240 VAC
RPDD	Potentiometer ½W, 1 MegΩ	480 VAC

* The input is not polarity sensitive but must be limited to 10 VDC.

The Nation's Most Advanced Facility for the Development, Production and Testing of Relays

With over 25 years of relay experience our product line now consists of more than 20 standard relays. Within the 67,000 square feet of manufacturing space we service the switching needs for major military and industrial accounts. Quality Control is not an accident here. We believe in and practice total control of all factors which could affect the end quality of our product. Continual emphasis is placed on utilizing state-of-the-art in new designs. We encourage all of our customers to visit our facility and view the operation first hand.

93GB184
93GB1810

MICRO-MINIATURE HIGH CURRENT TYPE WITH INTERNAL ARC BARRIER FOR GROUNDED CASE APPLICATIONS

SPECIFICATIONS (METHODS PER MIL-R-5757)

Weight: 2.0 ounces maximum.

Terminal Finish: Electro-Tin, Type 1 per MIL-T-10727, followed by a Flow Process.

Terminal Strength (Pull): 5.0 ±0.5 pound in any direction.

Case Finish: Non Corrosive.

Sealing: Seal Test per MIL-R-5757 (10^{-6} SCCPS)*

DC Coil Resistance: ±10% rated value at +25°C.

Shock: Per MIL-R-5757, Level 4.
50 G's for 11.0±1.0 Millisecond.
No contact closures of open contacts.
10 Microseconds max. chatter of closed contacts.

Minimum Contact Life (Case Grounded): Tested at +125°C, with rated contact loads.
DC Resistive: 100,000 operations at 20 CPM.
DC Inductive: 100,000 operations at 10 CPM.
DC Lamp: 100,000 operations at 3 CPM.
AC Resistive: 50,000 operations at 20 CPM.

Contact Overload: Two times rated contact loads for 100 operations.

Vibration: Per MIL-R-5757, level 4 except 0.125 inch double amplitude, 10 to 56 Hz.
20 G's max. at 56 to 2,000 Hz.
No closures of open contacts.
10 microseconds max. chatter of closed contacts.

Centrifugal Acceleration: 50 G's: No closures of open contacts.
10 microseconds max. chatter of closed contacts.

Moisture Resistance: Per MIL-R-5757, (Coil to case polarized at 100VDC).

Dielectric Strength (Sea Level): 1000 VRMS between open contacts, 500 VRMS Post Life.
500 VRMS between coil and case.
1000 VRMS between all other combinations.

Dielectric Strength (1.3" Hg): 500 VRMS (Open contacts 350 VRMS)

Insulation Resistance: 1000 Megohms minimum at 500 VDC (Coil to case 500 Megohms at +125°C), 10 Megohms Post Life

Coil Overvoltage: Reference Max. rated operate voltage.

Maximum Coil Dissipation: 3.5 Watts maximum continuous at +125°C.

Standard Pickup Power: 500 Milliwatts at +25°C.

Contact Ratings (Max. Amperes Per Pole) Case Grounded*: Contacts monitored per dynamic contact res. limits.

Res: 28 VDC, Connected Form C: 10.0 Amperes.

Res: 115 VRMS 1ϕ, Connected Form A or B: 7.5 Amperes at 400 Hz.

Res: 115 VRMS 1ϕ, Connected Form C: 5.0 Amperes at 400 Hz.

Res: 240 VRMS 1ϕ, Connected Form C: 3.5 Amperes at 400 Hz.

Inductive: 20 Millihenries, 28 VDC: 5.0 Amperes (Load spikes suppressed below 10 VDC).

Lamp: 28 VDC: 1.5 Amperes (18.0 Amperes inrush for 15 MSEC.)

Static Contact Resistance High Level: 0.01 OHM maximum; 0.02 maximum after life (Measured at or above 100 milliamperes and 6 VDC).

Dynamic Contact Resistance High Level: 1.0 OHM max. at or above 500 MA & 28 VAC or VDC.

Contact Operate Time: 7.0 Milliseconds max.

Contact Operate Bounce Time: 2.0 MSEC. Max. (Contacts above ½ Ampere)

Contact Release Time: 3.0 MSEC. max. (Contacts below ½ Ampere)
5.0 Millisecond maximum.

Contact Release Bounce Time: 3.0 MSEC. max. (Contacts above ½ Ampere).
4.0 MSEC. Max. (Contacts below ½ Ampere).

Duty Cycle: Continuous.

Rated Miss Detection: 5,000 cycles at 5 Hz maximum.
Current: 0.5 Ampere.
Voltage: 28 VDC.
Miss Level: 2.0 OHMS max.

* Unless otherwise indicated, values apply throughout the ambient temperature range and with nominal voltage.

GROUNDED CASE APPLICATIONS MAY HAVE THE LOAD AND COIL SUPPLIES ELECTRICALLY CONNECTED TO CASE COMMON

VARI-PACK REED RELAYS

General Description:
Elec-Trol Vari-Pack Reed Relays are specially designed to meet high performance and quality standards at low cost. They are available in both open and sealed versions and with coil terminals at the same end or opposite ends of the relay. The sealed version is the open version placed within a polyester cover then encapsulated. Optional features include magnetic shielding, electrostatic shielding and contact run-in.

The relay body is made of durable molded polyester with the reed contacts and terminals securely held in place at each end of the relay with epoxy. These relays are available with contact forms 1A through 6A, 1A and 2A mercury wetted, 1A latching, 1B, 2B, 1A1B, 2A 2B, and 1C through 4C, also available with end to end coil termination. Consult factory for other coil or switch configurations.

SUBMINIATURE OPTICALLY COUPLED

SC6, SC8 & SB SERIES SOLID STATE RELAYS

FOR AC LOADS AND DIRECT OPERATION FROM LOW-LEVEL LOGIC CIRCUITS

The SC6, SC8, and SB Series are complete zero cross solid state relays. If your load requires greater than the 0.75 Amp offered by the SB Series, the SC6 may be used to drive a triac. This combination retains the advantage of high transient immunity and tight zero cross window of the SC6.

The input circuit consists of a Ga As LED; the output consists of a pair of back-to-back SCR's controlled by proprietary IC circuits. Upon activating the LED input, the LED emits infra-red light which is transmitted through an optically transparent media to the output circuit. The IC's detect the zero crossing of the AC voltage and enable the photo-sensitive SCR's for the duration of the input. This arrangement is more resistant to line borne transients than conventional circuits and eliminates the use of an AC rectifier bridge. The dual SCR output affords better commutation and improved power dissipation over single thyristor output stages. The component count is significantly reduced, improving reliability.

The SB-5421/SB-5422 perform the same circuit function as the Teledyne 642-1/642-2 units. Input voltage however is nominally 5VDC. For higher input voltages, a series resistor must be added to the input.

SUBMINIATURE OPTICALLY COUPLED

SA-1000 SOLID STATE AC/DC SWITCH

The SA-1000 is a versatile unit that can act as an AC/DC input device or DC output device as well as a zero cross detector or voltage level sensor in other applications.

The SA-1000 is designed to perform the function of sensing the state of AC or DC voltages and reporting their status back to the low level control logic while providing a very high degree of isolation between these different systems. This is accomplished by using the drive voltage to activate an LED input through dropping resistors. The electrically isolated output circuitry detects the presence of the LED state and provides an output capable of sinking 200mA.

The SA-1000 has an output response time adjustment which allows the device to detect or ignore the zero crossover point of an A.C. input signal. The adjustment is controlled by a resistor (Rt) connected to pins #5 and #7 and typically varies over a range of 220k to 2.2m ohms.

ELECTRICAL CHARACTERISTICS (25°C free air unless otherwise specified)

INPUT	MIN	TYP	MAX	UNITS	TEST CONDITIONS
Forward voltage V_f			±1.5	VDC	I_f = 20 mA
Operating current		1	5	mARMSorDC	I_L = 10 mA
Continuous forward current			40	mARMSorDC	
SUPPLY (V_{cc} Pin 8)

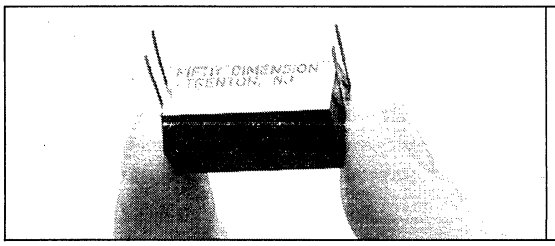
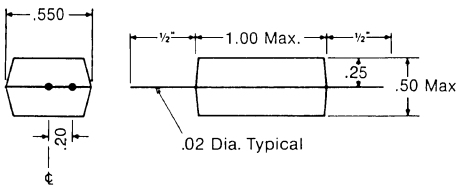
UNITED TECHNOLOGIES HAMILTON STANDARD CONTROLS

Fifth Dimension Mercury Film Relays

• Solid state circuit compatible • Two billion cycle reliability • Switch dry circuit or power loads • No contact bounce • Operate in any position



Series K Relays
Epoxy sealed, these miniature relays are available with axial leads or pins for PCB mounting. Solid State signal compatibility.



In addition to excellent signal handling capabilities, long life and low noise, Fifth Dimension Series K mercury film relays offer unusual design freedom. Small size, rugged construction—the mechanism is cased in metal, not glass—and the ability to operate in any position allow their use in applications not possible with conventional mercury relays. Series K relays are currently in use in microprocessor input interfaces, modem line pulsing, telephone line switching test systems, touch tone convertors, automatic test equipment, data acquisition systems and industrial controls.

Series K Relay Footprints

Axial distance between pins, all models, 1 inch nominal.

(XX indicates footprint)

Reliability is based upon tests conducted on over 200 relays which were exercised a total of over 34 billion operations. Specified values should not be considered as a guaranteed performance for a single relay, but rather a prediction of the performance of the cumulative results of a universe of units.

*Contact resistance is measured at end of switching capsule and does not include terminal lead resistance.
All specifications typical and subject to change without notice.

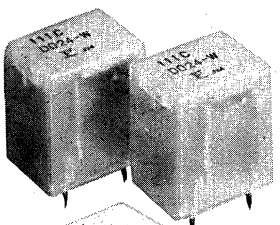
RELAYS

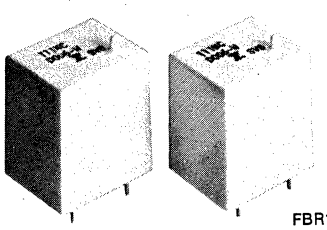
MINIATURE RELAYS FOR P.C. BOARDS

FBR111 AND FBR111N SERIES

SPDT 3A-28V DC/120V AC, 6A-28V DC/120V AC



FBR111



FBR111N

The Fujitsu FBR111 and FBR111N Series are low cost SPDT relays with a versatile switching capability. The contact is rated 3A, 28V DC; 3A 120V AC for standard contact, or up to 6A, 28V DC; 6A, 120V AC for special heavy duty contact.

These small size, sensitive relays, designed to be mounted on printed circuit boards, feature simplified construction and a low power dissipation.

It is ideal for use in audio equipment, business machines, vending machines, security systems, game machines and automotive applications.

The FBR111N Series is the immersion cleanable version where printed circuit board cleaning is required.

The relay specified FBR111U is UL recognized for office equipment and business machines. (File No. E63615.) CSA certified.

DIMENSIONS Unit: mm (inch)

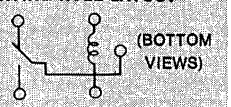
MOUNTING HOLE LAYOUT



1 FORM C

SCHEMATICS

Notes:
1. Cut-off nib must be removed after relay soldering and board cleaning.
2. Although the plastic cover is bonded to the relay base, it is not hermetically sealed. Therefore, when the board on which the relay is soldered is cleaned by immersion, cleaning time must not exceed 2 minutes. Please use alcohol, freon or water for cleaning (water temperature is less than 50°C).

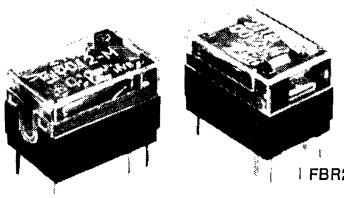
Note 1. 48V rated voltage relays are available on special order.
2. Each product bears its own designation on the top of the cover, but initial code 'FBR' is omitted.
* Add $0.14 to price for –K, $0.28 for –M, $0.14 for –W.
For CSA certified relays, –CSA suffix must be added to part number of UL type. Price is same as UL type.

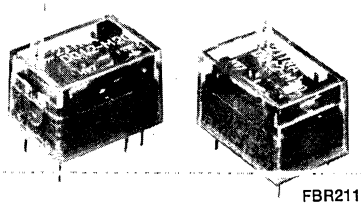
ULTRA-MINIATURE RELAYS FOR P.C. BOARDS

FBR211 AND FBR211N SERIES

SPDT 1A-28V DC, 0.5A-120V AC



FBR211



FBR211N

The FBR211 and FBR211N Series of ultra-miniature relays allow high component densities for savings in both equipment size and cost for the printed circuit board. The FBR-211N Series is suitable for immersion cleaning in freon and aqueous systems.

These highly sensitive relays with gold-clad SPDT contact arrangements are ingeniously designed so as to offer flux-contamination-immunity and load handling capabilities of 1A at 28V DC or 0.5A at 120V AC under a resistive load. The 0.1″ grid spacing of terminals makes these relays ideally suited for printed circuit board applications requiring high density mounting and for use in audio and wireless communications, office and vending machines, automobiles and various control applications.

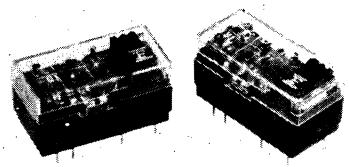
FUJITSU

RELAYS

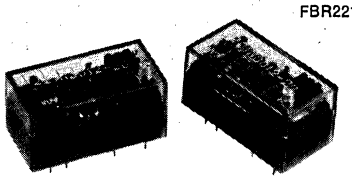
ULTRA-MINIATURE RELAYS FOR P.C. BOARDS

FBR221 AND FBR221N SERIES

DPDT 1A-28V DC, 0.5A-120V AC



FBR221



FBR221N

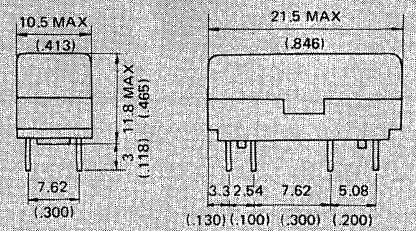
The FBR221 and FBR221N Series of ultra-miniature relays are designed to provide high component densities for savings in both equipment size and cost.

These highly sensitive relays with gold-clad DPDT contact arrangements can switch loads up to 1A at 28V DC or 0.5A at 120V AC.

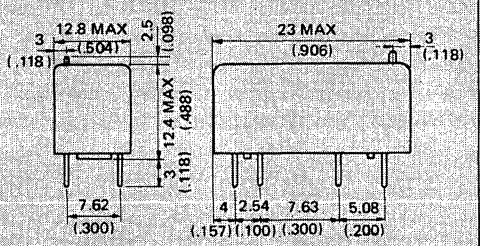
The .1″ grid spacing of terminals makes these relays ideally suited for printed circuit board applications requiring high density mounting — and for use in audio and wireless communications, office machines, various control applications and automobiles.

DIMENSIONS Unit: mm (inch)

FBR221



FRB221N



Notes:
1. For low level or dry circuit switching, use of gold thick-overlay silver-palladium alloy contact relays is recommended.
2. Cut-off nib must be removed after relay soldering and board cleaning.
3. Although the plastic cover is bonded to the relay base, it is not hermetically sealed. Therefore when the board on which the relay is soldered is cleaned by immersion, cleaning time must not exceed 2 minutes. Please use alcohol, freon or water for cleaning.

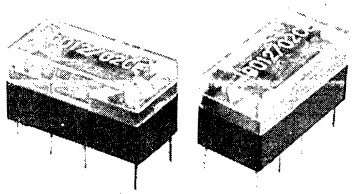
LOW PROFILE RELAYS FOR P.C. BOARDS

FBR244 AND FBR244N SERIES



FBR244 and FBR244N Series Relays are low profile, P.C. board relays with 2 Form C (DPDT) contact arrangements in D.I.P.-compatible plastic housing and have a 2.54mm pinout grid spacing to provide 16-pin-DIP-socket compatibility. Watertight terminal sealing prevents relay from contamination by soldering flux and N type allows automatic wave soldering and board washing without relay damage. Single or bifurcated contacts switch 1A at 28V DC or 0.5A at 120V AC and have a rated-load life-time of 5×10^5 operations. These relays are suitable for telecommunication equipment, audio equipment and business machines.

For 48V relays add $0.60 to the prices of the 24V relays.

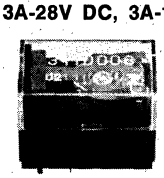
FUJITSU

RELAYS

MINIATURE RELAYS FOR P.C. BOARDS

FBR311 (SPDT) AND FBR321 (DPDT) SERIES

3A-28V DC, 3A-120V AC



FBR311

FBR321

The FBR311 (SPDT) and FBR321 (DPDT) Series miniature relays were designed to provide 3 amps ratings contacts, accommodated in truly compact packages for P.C. boards.

These sensitive miniature relays, featuring high density mounting, flux-contamination immunity, versatile switching performance from signal level to handling 3 amps, are ideally suited for such applications as audio equipment, office machines, vending machines and automotive or other control application. These relays are UL Recognized (E63615) and CSA Certified (add —CSA suffix to P/N).

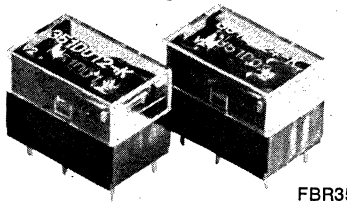
For 48V relays add $0.28 to prices of 24V relays.

MINIATURE RELAYS FOR P.C. BOARDS

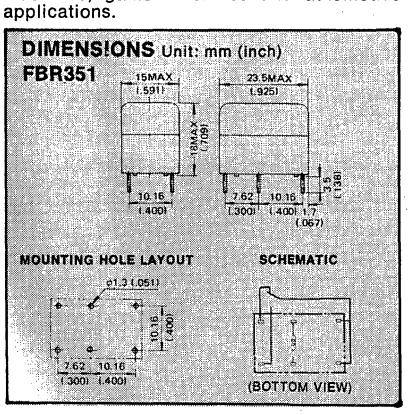
FBR351 SERIES

SPDT 3A-28V DC/120V AC, 6A-28V DC/120V AC



FBR351

FBR351 Series miniature relays are 1 Form C compact relays which can be used for a wide range of current switching from low levels to heavy loads. Two types are available: gold overlay contacts with contact ratings of 3A, 28V DC or 120V AC, and silver cadmium oxide contacts in 6A, 28V DC or 120V AC. These relays can be easily mounted on a PC board and use 3 pitch (7.62mm) pin arrangements. What's more, FBR351 Series relays endure 6KV at 40μ second in lightening. They are ideal for use in audio equipment, business machines, game machines and automotive applications.



ENGINEERING DATA FBR351

Item	Specifications	
	Standard	High-power Type
Contact Arrangement	1 Form C (SPDT)	
Contact Ratings	3A at 28V DC or 120V AC (resistive)	6A at 28V DC or 120V AC (resistive)

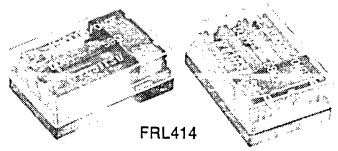
For 48V relays add $0.28 to prices of 24V relays.

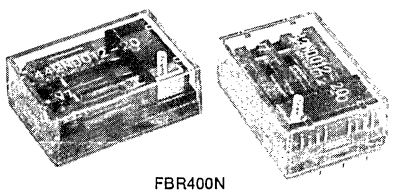
FLAT PACKAGE RELAYS

FRL-414 AND FBR400N SERIES

4PDT, DPDT 1A-30V DC, 1A-120V AC



FRL414



FBR400N

The Fujitsu FRL-414 and FBR400N (immersion cleanable) Series Flat Package Relays have been designed for P.C. board mounting and are ingeniously constructed so as to offer the advantages of flux-contamination-immunity.

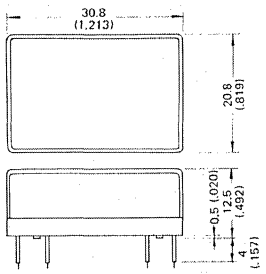
The low power consumption relays are available in both DPDT and 4PDT contact arrangements and in coil voltage ratings to 48V DC. The wide selection is useful for numerous demanding applications, including communications, data processing and controls.

Bifurcated contacts assure high reliability. These relays are capable of handling resistive loads of up to 1A at 30V DC or 120V AC.

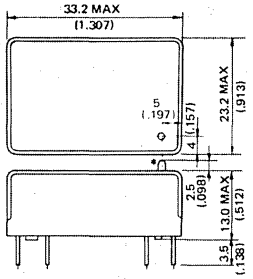
A low level load version with gold overlay silver-palladium alloy contacts is also available. Electrical life expectancy is more than three million operations at 1A-50V DC resistive load.

DIMENSIONS Unit: mm (inch)

FRL-414



FBR400N



Notes:

1. For low level or dry circuit switching, use of gold overlay silver-palladium alloy contact relays is recommended.
2. *Cut-off nib must be removed after relay soldering and board cleaning.
3. Although the plastic cover is bonded to the relay base, it is not hermetically sealed. Therefore when the board on which the relay is soldered is cleaned by immersion, cleaning time must not exceed 2 minutes. Please use alcohol, freon or water for cleaning.

FRL-414, FBR400N

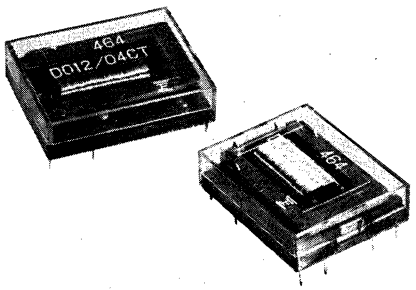
RELAYS

LOW PROFILE RELAYS FOR P.C. BOARDS

FBR464 AND FBR464N SERIES

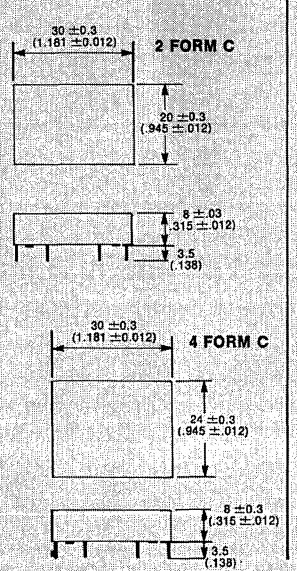


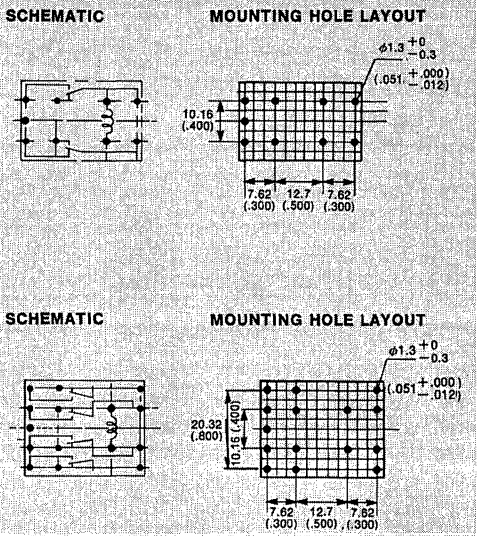
FBR464 and FBR464N Series Relays are low profile, P.C. board relays suitable for flat pack component groupings and space saving for P.C. board rack assembly. Terminal arrangement is 2.54mm grid spacing and watertight sealing for terminals prevents contact from contamination by soldering flux. 2 Form C or 4 Form C bifurcated contacts switch 1A at 30V DC or 120V AC and have life-time of 5 million operations under 1A, 30V DC resistive load. Also, N type version provides excellent protection against automatic wave soldering and board washing with aqueous cleaning solvent.

These Relays are ideal for application in communication equipment and other control machines.

DIMENSIONS Unit: mm (inch)

FBR464, FBR464N





ENGINEERING DATA

Item	Specifications
Contact Arrangements	2 Form C, 4 Form C
Contact Material	CT type Gold overlay silver CE type Gold overlay silver-palladium alloy
Contact Rating	1A, 30V DC (resistive) — 1A, 120V AC (resistive)
Initial Contact Resistance	100mΩ max.
Coil Power Dissipation	DPDT: 0.3W approx. — 4PDT: 0.48W approx.
Coil Temperature Rise	DPDT: 20°C approx. at rated voltage 20°C — 4PDT: 35°C approx.
Insulation Resistance	100MΩ min. at 500V DC
Dielectric Withstanding Voltage	500V AC for 1 minute
Vibration	10~55 Hz (Dual amplitude: 1mm)
Shock	10G (11 ms)
Operate Time	15 ms max. at rated voltage
Release Time	5 ms max.
Life Expectancy — Mechanical	30 x 10^6 ops. min.
Electrical	5 x 10^6 ops. min. (30V DC 1A, resistive) 100 x 10^3 ops. min. (120V AC 1A, resistive)
Ambient Temperature Range	−30°C~+60°C
Weight	DPDT: 11 gr. approx. — 4PDT: 12 gr. approx.

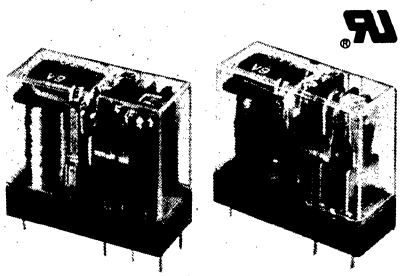
MINIATURE HIGH-POWER RELAYS

FBR600 SERIES



The FBR600 Series are miniature high-power relays with a switching capability of 10A, 30V DC or 240V AC for 1 Form C contact; and 5A, 30V DC or 240V AC for 2 Form C contacts. These relays, conforming to VDE, UL and CSA standards, are designed for mounting on printed circuit boards. Dielectric withstanding voltage is 500V AC for 1 minute and creeping distance is 8mm. These FBR600 Series relays are ideal for use in audio equipment, TV, vending machines, control machines, etc.

UL recognized (E63615) for industrial control equipment per UL508.

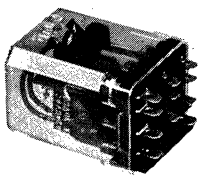
FUJITSU

RELAYS

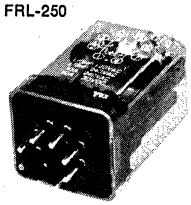
HEAVY DUTY GENERAL PURPOSE RELAYS

FRL-250 AND FRL-256 SERIES

SPDT, DPDT, 3PDT 10A-30V DC, 10A-240V AC



FRL-250

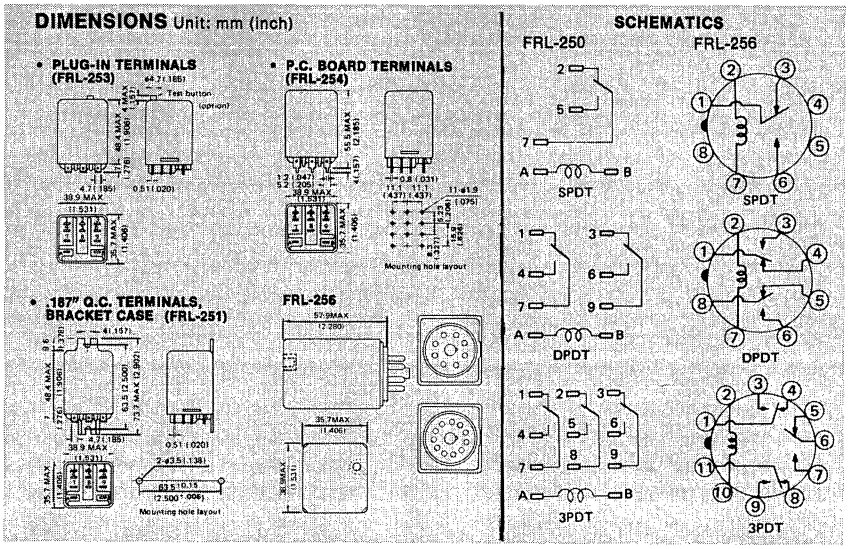


FRL-256

The FRL-250 Series Relays have been designed with particular attention to reliability, cost performance and versatility of application. These heavy duty general purpose relays provide SPDT, DPDT or 3PDT contacts with switching ability of 10A at 30V DC or 240V AC. The FRL-250 Series Relays provide various mounting styles such as plug-in, bracket case, tapped core, stud or P.C. board, and their terminals are convenient quick-connect/solder or P.C. board. The optional features are with or without test button for manual circuit checking and indicator lamp to indicate whether power is reaching relay.

These relays are particularly desirable for use in automation control, communication circuit and many other applications where high power switching and rugged construction are required.

The FRL-250 Series relays are UL recognized (File No. E63614) and C.S.A. certified (File No. LR40304).



ENGINEERING DATA

Item	Specifications
Contact Arrangement	SPDT, DPDT, 3PDT
Contact Rating	10A at 30V DC (resistive) — 10A at 240V AC (resistive) ⅓ HP at 120V AC, ½ HP at 240V AC
Initial Contact Resistance	100mΩ max. at 6V DC, 1A
Contact Material	Gold flashed silver-cadmium oxide
Rated Coil Voltage	6, 12, 24, 48, 110V DC — 12, 24, 48, 120, 240V AC
Coil Power Dissipation	DC: 1.2W, AC: 3PDT — 2.7VA, DPDT, SPDT — 2VA at rated voltage, 60 Hz
Coil Temperature Rise	DC: 40°C max., AC: 60° max.
Insulation Resistance	100MΩ min. at 500V DC
Dielectric Withstanding Voltage	2000V AC for 1 minute (1000V AC between open contacts)
Operate Time	30 ms max. at rated coil voltage
Release Time	30 ms max.
Life Expectancy — Mechanical	10×10^6 ops. min.
Electrical	100×10^3 ops. min. at rated load
Vibration	600 to 1500 rpm (Dual amplitude: 1mm)
Shock	10G (11 ms)
Temperature Range	DC: −45°C to +70°C/AC: 3PDT: −45°C to +45C°/DPDT, SPDT: −45°C to +55°C
Weight	80 gr. approx.

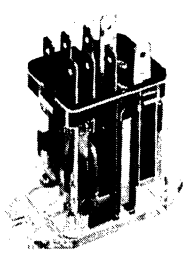
GENERAL PURPOSE RELAYS

FRL-260 SERIES

4PDT-3A, 3PDT-5A, DPDT-10A, SPDT-15A



The FRL-260 series relays with proven performance and top quality have been designed with emphasis on reliability, safety, cost performance and applicability to a wide range of uses.

These relays provide SPDT to 4PDT contacts, which are offered for contact ratings from 1 amp to 15 amps at 30V DC or 240V AC, resistive. Moreover, they are also available with 4 transfer bifurcated contacts that enable them to meet signal level or other light loads.

The FRL-260 series relays are available in both DC- and AC-rated coils, and with a selection of mountings, such as solder, plug-in, P.C. boards and quick connect terminals.

The FRL-260 series is UL recognized (File No. E63614/E63615) and C.S.A. certified.

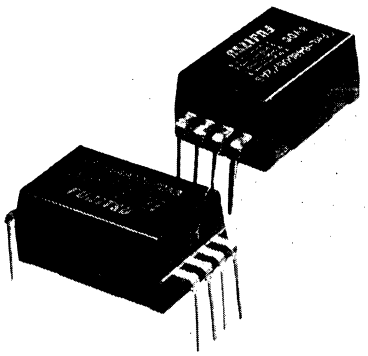
MICRO REED RELAYS FOR P.C. BOARDS

FRL-648 SERIES



The FRL-648 Series Micro Reed Relays offer a wide selection and outstanding performance to meet those demanding on-board switching requirements and high density packaging applications.

These relays, available in 1 Form A/B and 2 Form A/B, feature a standard contact rating of 50VA/10W for S type/K type, compact size with a mounting height of only 9mm (.354"), epoxy-molded construction for immersion cleaning safety, low power consumption, and the option of magnetic shielding for isolation from the effects of adjacent relays.

These relays are ideally used for various applications for audio equipment, data processing systems, communications, measuring and control equipment.

Fujitsu field proven dry reed switches are employed as the switching element in the relays in order to offer an excellent low resistance contact and low noise characteristics.

DIMENSIONS Unit: mm (inch)

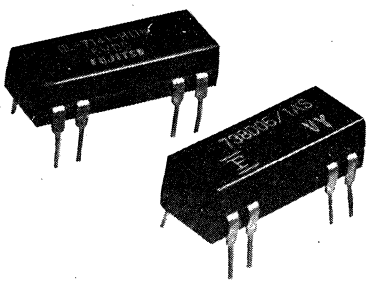
RELAYS

D.I.P. REED RELAYS
FRL-730 SERIES



The FRL-730 Series D.I.P. Reed Relays are available in 1 Form A contact with contact rating capability of up to 10VA.

These relays can be mounted in the standard 14-pin dual-in-line package with epoxy-molded construction for safe immersion cleaning. Models with diode and/or electrostatic shield are available.

These FRL-730 D.I.P. reed relays are ideal for use in data processing systems and communications, measuring and control equipment.

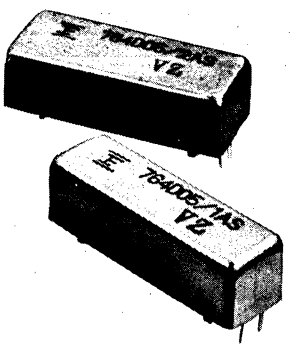
MICRO REED RELAYS FOR P.C. BOARDS

FRL-764 and 768 SERIES



FRL-764 and 768 Series Micro Reed Relays offer excellent operating characteristics such as fast operating time, high reliability and long life. Available in a choice of contact arrangements (1 Form A, 2 Form A and 4 Form A) and contact rating capabilities (10W for standard type and 30W DC, 50VA AC for heavy load type), they are potted by polyurethane resin. These low-profile relays are compatible with 1 x .1 inch grid spacing for P.C. board mounting. These micro reed relays are ideal for use in telecommunications, audio equipment, process control systems and vending machines.

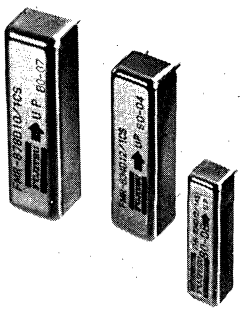
FUJITSU

RELAYS

MERCURY WETTED CONTACT RELAYS

FMR-800 SERIES



Fujitsu FMR-800 Series mercury wetted contact relays are compact for P.C. board mounting.

Highly stable, they can be used for a wide range of current switching from very low levels to heavy loads. Conventional flux cleaning can be used after P.C. board mounting as these relays are potted with polyurethane resin. The mercury switching gives these relays a bounce-free contact and an extremely long operating life. Therefore, Fujitsu mercury wetted contact relays are ideal for use in measuring equipment, communications systems, computer systems, automatic control systems etc.

FEATURES

- Extremely long life expectancy (10 x 10^9 operations)
- Short operate/release time (2 ms) and no contact bounce
- Stable, low contact resistance
- Available for wide current range switching from low level signals to 2 amps
- Contacts are independent from atmospheric conditions

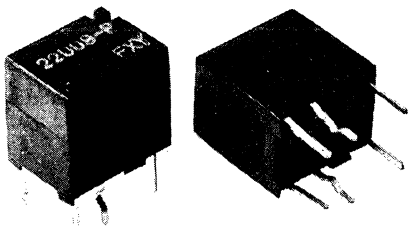
RELAYS

MICROMINIATURE RELAYS FOR P.C. BOARDS

FBR20 SERIES

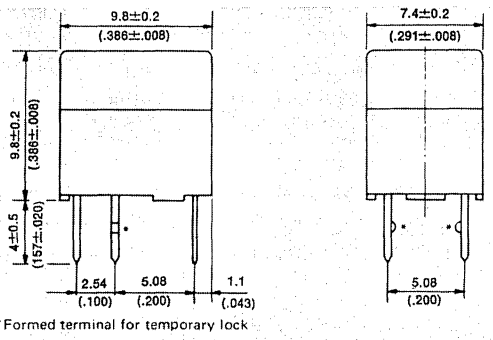


Fujitsu FBR20 series relays are designed for PC board mounting with 1A contact ratings — perfect for microminiature applications.

FEATURES

- **Microminiature size**
  Two FBR20 series relays can be mounted in the space now for a single FBR210 series relay.
- **1A contact rating**
  Despite their microminiature size, FBR20 series relays have contact rating of 1A at 24 VDC for convenient installation.
- **Gold overlay bifurcated contact**
  Contact reliability is assured in low level applications by contact shapes and materials especially designed for signal switching applications.
- **Low power consumption**
  With a rated power consumption of only 0.3W, today's expensive energy costs can be reduced significantly.
- **Wide range of drive voltages**
  Drive voltages from 1.5 VDC to 24 VDC are available for a wide range of applications.
- **Strong shock resistance**
  Even with a 50G shock, FBR20 series relays never miss a switch.
- **Easy to pattern-design**
  Separate terminal connection with drive and output sections allow easy pattern design.
- **Formed terminal available for temporary lock**
  The unique design of the forming terminal allows FBR20 series relays to be temporary mounted for greater design flexibility.
- **Automatic soldering provision**
  The terminal is sealed to prevent flux from entering during automatic soldering.

DIMENSIONS



*Formed terminal for temporary lock

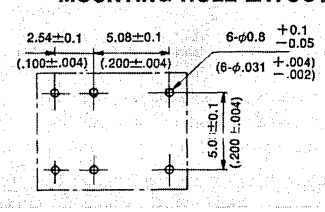
MOUNTING HOLE LAYOUT



ENGINEERING DATA

Item	Specifications
Contact Arrangement	SPDT (1 Form C)
Contact Shape	Single contact (FBR21), Bifurcated contact (FBR22)
Contact Material	Gold overlay silver, Gold overlay silver-palladium alloy (—P)
Contact Rating	24 VDC-1A, 120 VAC-0.5A (resistive load)
Maximum Carrying Current	2A
Maximum Switching Voltage	125 VDC, 125 VAC
Maximum Switching Power	24 WDC, 60 VA AC (resistive load)
Initial Contact Resistance	100mΩ max. (measured at 6V DC-0.1A)
Coil Power	0.3W (at rated voltage, 20°C)
Coil Temperature Rise	45°C (at rated voltage, 20°C)
Insulation Resistance	1,000mΩ min. (at 500 VDC)
Withstanding Voltage	Between contacts: 500 VAC for 1 minute Between contact and coil: 750 VAC for 1 minute
Vibration	20G, 10 ~ 300 Hz (dual amplitude, maximum 3.0 mm). No contact chatter longer than 1.0 ms.
Shock	Operation error: 50G (sine half-wave of 11 ms). No contact chatter longer than 1.0 ms.
Operate Time	5 ms max. (at rated voltage)
Release Time	3 ms max. (after rated operation)
Life Expectancy	Mechanical: 5 x 10^6 cps. min. Electrical: Gold-overlay silver contacts: 100 x 10^3 ops. min. Gold-overlay silver-palladium alloy contacts: 200 x 10^3 ops. min. (at rated contact load)
Maximum Switching Frequency	Mechanical: 18,000 operations/hour Electrical: 1,800 operations/hour (at contact rated load)
Ambient Temperature	−30°C ~ +65°C (at rated operation)
Ambient Humidity	45 ~ 85% RH
Weight	1.7 g (approx.)

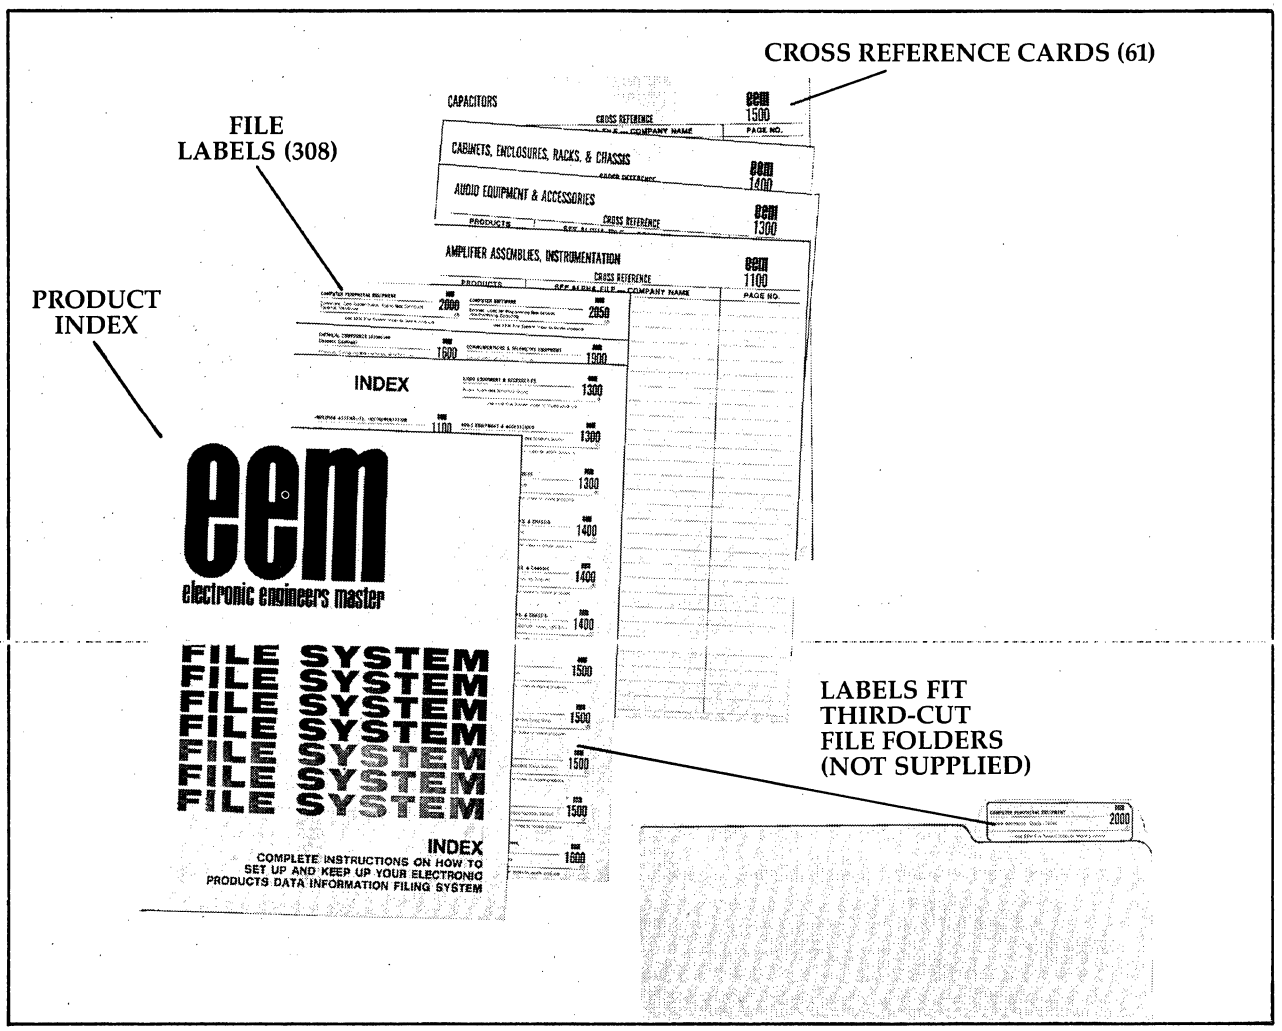
SELECTION TABLE

Type	Voltage Specifications	Coil Rated Voltage	Coil Resistance (±10%)	Coil Current (At Rated Voltage)	Pick-up Voltage	Drop-out Voltage	Maximum Voltage Allowance	Rated Power Consumption	Coil Temperature Rise
Standard Type	D01	DC 1.5V	7.5Ω	approx. 200mA	Less than 80% of rated voltage	More than 5% of rated voltage	160% of rated voltage	Approx. 300mW (at rated voltage)	Approx. 45 deg. (at rated voltage)
	D03	DC 3 V	30 Ω	approx. 100mA					
	D05	DC 5 V	83 Ω	approx. 60mA					
	D06	DC 6 V	120 Ω	approx. 50mA					
	D09	DC 9 V	270 Ω	approx. 33mA					
	D12	DC 12 V	480 Ω	approx. 25mA					
	D18	DC 18 V	1,080 Ω	approx. 17mA					

Notes: 1. 24V relay is available by request.
2. Measured at 20°C

EEM PRODUCT SELECTION GUIDES

Use the EEM Product Selection Guides.
There are 33 Guides in this edition of EEM.
See page 2 (1•2, 2•2, 3•2) of each volume to locate the Product Selection Guides that pertain to your needs.



WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

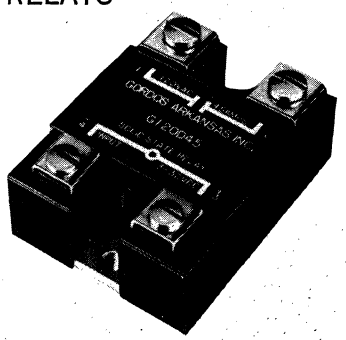
AC SOLID STATE RELAYS
(photo isolation — Back-to-Back SCR)

G SERIES

BACK-TO-BACK SCR AC SOLID STATE RELAYS



- Back-to-back (dual) SCR output for switching highly inductive AC loads
- Superior turn-on immunity and positive turn-off ability at high dv/dt
- Optical coupling
- Zero-voltage turn-on
- 10 to 45 Arms current ratings
- Output RC network
- 3-32 VDC and 90-280 VAC input ratings
- 24 to 480 VAC line voltages
- UL recognized. CSA certified
- Some models optionally available in compliance with VDE specs 0730, 0730 part 2P, 0806, and IEC Specs 380 and 435. **(Consult factory for details)**

APPLICATION GRID

PART ORDERING INSTRUCTIONS:

1. Use the grid below to select your Control Voltage.
2. Then determine the Maximum Line Voltage and Maximum Load Current required.
3. When you have identified your Part Number on the grid, refer to the Part Number Key and charts at the left for complete Part Specifications.

GENERAL SPECIFICATIONS

(Apply to all part numbers)

Input to Output Isolation (and Input to Base) Dielectric Strength (min.) 2500 VAC

Insulation Resistance (min.): 10^{10} Ohms

Coupling Capacitance (typical): 8 pF

Operating Temperature Range: −40 to 80°C

Storage Temperature Range: −40 to 100°C

DIMENSIONS: INCHES (MILLIMETERS)

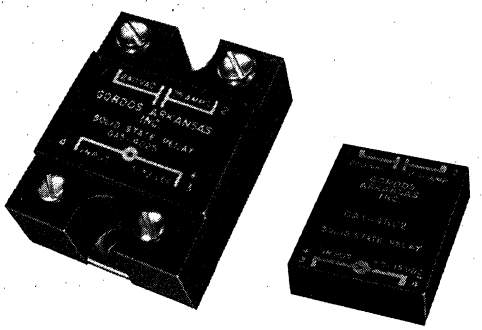
TOLERANCE: ±.02 ±,50

GORDOS ARKANSAS

AC SOLID STATE RELAYS
(photo isolation — triac)

GA SERIES

GENERAL PURPOSE



All SSRs in the GA Series feature:

- Industry-standard packaging
- All-solid-state design
- Glass-passivated triacs for long-life component integrity
- Outputs up to 40 amps
- Output snubber networks
- Zero voltage turn-on
- 2500 VAC optical isolation
- Inductive load switching up to 0.4 power factor
- Room temperature encapsulation
- Logic compatible inputs
- UL recognition and CSA certification
- Stress-free construction

The Gordos GA Series of SSRs has been specifically designed and marketed to meet your commercial requirements.

Whether your application is gas pumps or copiers, computer peripherals or process controllers, study the GA specs carefully. Then let Gordos handle your high-volume needs from this versatile, in-stock line.

GA Series relays get a minimum of 200% testing — multiple component and functional tests that make Gordos the reliability standard in SSRs.

NOTES: 1. Excessive voltage (maximum of 7.5 VDC for 5 VDC model, 15.0 VDC for 12 VDC model, and 32.0 VDC for 24 VDC model) may cause reclosure on form B models.
2. To specify diode add "D" after model number.
3. For operation above 40°C ambient temperature, consult Gordos Corporation.
4. Mercury wetted models must be mounted ±30° from vertical..

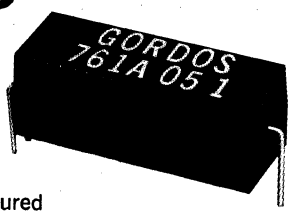
76 SERIES

MOLDED EPOXY



- Low Cost
- Dry Reed, Power and Sensitive Versions
- Designed to meet various packaging requirements
- Popular PCB grid patterns
- Environmental immunity assured
- Logic compatible
- Resistant to board cleaning solvents
- Power series offers tough tungsten contacts capable of handling high inrush inductive and capacitive loads without contact protection in most applications.

NOTES: 1. To specify diode, add "D" after part number.
2. Magnetic shielding is standard.
3. Consult factory for electrostatic shielding.
4. Orientation arrow appears on all mercury wetted models. These These relays must be mounted ±30° from vertical.
5. Excessive voltage (maximum of 7.0 VDC for 5 VDC model, 15.0 VDC for 12 VDC model, and 30.0 VDC for 24 VDC model) may cause contact reclosure on form B models.

GÜNTHER

LOW PROFILE DIP
REED RELAY

A GORDOS INTERNATIONAL Company

3570 SERIES

LOW PROFILE DIP

- Low profile makes this relay ideal for microprocessor and numerical control applications
- Environmental immunity assured
- Logic compatible
- All Günther molded devices are molded of glass filled, non-burning epoxy

MUST OPERATE/RELEASE CHARACTERISTICS

Nominal Coil Voltage (VDC)	Must Operate Voltage (VDC) @ 25°C	Must Release Voltage (VDC) @ 25°C
5	3.7	1
12	8.0	2
24	16.0	4

OPERATING CHARACTERISTICS

Model	Operate Time* (Typical)	Release Time Without Diode* (Typical)	Storage Temperature Range
3570	.50	.20	−55°C to +105°C

* Operate and release times (including bounce) in milliseconds, may vary depending on voltage applied.

NOTES:
1. Type 3570-1341-___ ___-___ has insulation resistance between coil and contact of $10^{12}\Omega$ measured with 100 VDC at ambient temperature.
2. Type 3570-1342-___ ___-___ has 3 KV break-down voltage between coil and contact.
3. Consult factory for electrostatic shield requirements. Last digit of part number is changed to "-2" to indicate electrostatic shield or "-4" to indicate clamp diode and electrostatic shield.
4. Low-power Schottky application.

Allied Control Relays

General Purpose Relays

CRADLE® SERIES T154/163

DC Relays — Current and Voltage Adjusted

AC Relays — Voltage Adjusted

FEATURES

- **T154 Single-Point Contacts**
- **T163 Bifurcated Contacts**
- **Proven Cradle® reliability**
- **100 million mechanical operations**
- **Contact selection to match application**
- **Contact configuration:**
  DC Voltage: up to 8 Form C
  AC Voltage: up to 4 Form C
- **Input voltages:**
  DC Voltage: from 3 VDC to 115 VDC
  AC Voltage: from 6 VAC to 220 VAC
  50/60 Hz
- **Sensitivity as low as 20 MW/pole** (DC Voltage only)
- **Low-priced relays**
- **Versatile mounting configurations**
- **High density packaging**
- **UL File E20604 / CSA File 34171**

TYPICAL OPERATING CONDITIONS @ 25°C

ELECTRICAL

Minimum drop-out (DC voltage):
10% of maximum pick-up value (5% for single and double-pole relays)

Dielectric Strength:
1000 VRMS, coil to contacts and between gaps on standard T154 series
500 VRMS, between contact gaps on sensitive, ultrasensitive relays and on all relays with bifurcated contacts

Insulation resistance:
10,000 megohms minimum

Capacitance, DC Voltage:
Closed contacts to frame 3.0 pf
Open contacts to frame 3.0 pf
Between open contacts 3.0 pf
(energized or de-energized)

Capacitance, AC Voltage:
Contact to contact 3.0 pf
Coil to contact 3.0 pf
Coil to frame 30 pf

Operate time, DC Voltage:
15 MS max. at nominal voltage

Operate time, AC Voltage: 25 MS

Release time, DC Voltage:
8 MS max. at nominal voltage

Release time, AC Voltage: 25 MS

ENVIRONMENTAL

Ambient temperature: −55°C to 71°C

Midget Power Relays

NEW!
GH SERIES — 10 AMPS
GY SERIES — 3 AMPS

FEATURES

- **Low contact resistance**
- **UL listed:** E20604, E70463
  CSA listed: 35144
- **GH Series:** Smallest 10 amp relay

SPECIFICATIONS

SERIES GH
Contact resist.: 100 milliohms max.
Operate time:
SPDT, DPDT: 20 ms max.
4PDT: 25 ms max.
Release time:
SPDT, DPDT: 20 ms max.
4PDT: 25 ms max.
Power consumption:
SPDT, AC: app. 1 VA (60 Hz)
SPDT, DC: app. 0.8W
DPDT, AC: app. 1.2 VA (60 Hz)
SPDT, DC: app. 0.9W
4PDT, AC: app. 2 VA (60 Hz)
4PDT, DC: app. 1.5W

SERIES GY
Contact resist.: 100 milliohms max.
Operate time: 20 ms max.
Release time: 20 ms max.
Power consumption:
DPDT, AC: app. 1 VA (60 Hz)
DPDT, DC: app. 0.8W
4PDT, AC: app. 1.2 VA (60 Hz)
4PDT, DC: app. 0.9W

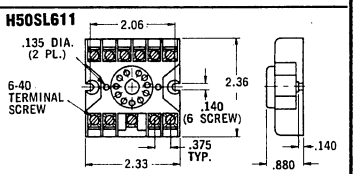
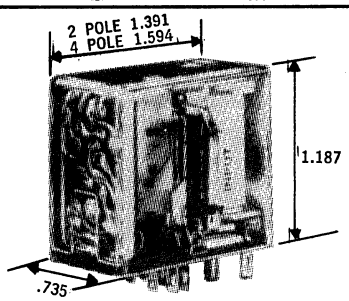
H50SL611	11 pin — 3 pole double throw





TIMERS, DPDT 5 AMP — Series TD10

The TD10 utilizes the service proved T154 Cradle® relay with a solid state timing circuit to provide timing from 0.1 to 100 seconds with +2% repeat accuracy.

Available as "time delay to make" or "interval" timing models with optional operating and mounting features.

Allied Control Relays

Low Profile Relays

SERIES DR DIP RELAYS
FEATURES:

- Miniature Dual-in-line Relay fits standard 16 pin I.C. sockets or mounts directly on PC board within 0.5" spacing.
- Low profile, only 0.380" max. above PC board.
- Extremely sensitive coil operation 200 mw. with 1 amp. 28 vdc switching and 5 amp. carry capability, 2 amp. Resistive @ 12 VDC.
- Sealed construction for wave soldering, .010" pad on base for ease in cleaning.
- All plastic parts meet U/L 94V-O specifications.
- D.P.D.T. configuration within one small package.

NEW! SERIES DR– DUAL-IN-LINE

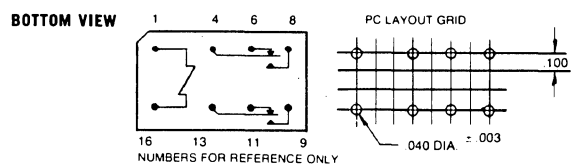
DRS-2C-24VDC	1,600Ω	24V	18.0V	0.90V	200mW	1 Amp
DRS-2C-36VDC	4,000Ω	36V	27.0V	1.4V	200mW	1 Amp
DRS-2C-48VDC	6,400Ω	48V	36.0V	1.8V	200mW	1 Amp

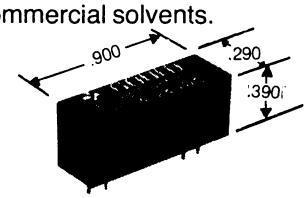


Consult factory for 1A, 2A, 1B, 2B contact configurations.

SERIES SR SIP RELAYS
FEATURES:

- Superior switching – 2 ampere Bifurcated contacts, handles (6) times the inductive load of a standard size Form "A" contact Reed Relay.
- Small space – ¼ in² PCB space with .390" max. height.
- Easy mounting, symmetrical, eliminates installation errors. Mounts in PCB or on strip or in DIP sockets.
- Fast response – 2 ms typical at rated pull in voltage, 1 ms release.
- 420-SEO Valox Housing meets UL 94V-0 flammability requirement.
- Housing resists fluorocarbon, aqueous detergent and chlorinated commercial solvents.

NEW! SERIES SR– SINGLE-IN-LINE



Catalog No.	Coil Res.	Input	Pull-in	Drop-out	Pick-up Power	Contact Rating
SPST-NO[1]						
SR-1A-3VDC	38Ω	3V	2.3V	0.13V	125mW	2 Amp

Allied Control Relays

Low Profile Relays

SERIES MPC MINIATURE RELAYS

Series MPC – Miniature PC, Standard
Series MPCS – Miniature PC, Sensitive
Series MPCL – Miniature PC, Latching

FEATURES:

LOW PROFILE – miniature dc operated relay offers space savings comparable to reed relay

LONG LIFE – patented hingeless armature construction insures long mechanical life

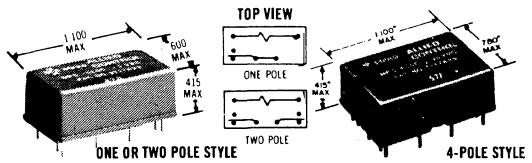
POWER SWITCHING – using standard gold plated silver contact material, MPC Relay has power handling capability of 50 watts per pole

HIGH RELIABILITY – interlocking housing to base minimizes contaminants affecting performance

MULTI-POLE CONTACTS – one form C to four form C available in two basic case sizes

SENSITIVE VERSION – operates from TTL – Driver circuits, available in one form C and two form C within same package size

SERIES MPC – STANDARD VERSION



Catalog No.	Coil Res.	Input	Pull-in	Drop-out	Pick-up Power	Contact Rating

Allied Control Relays

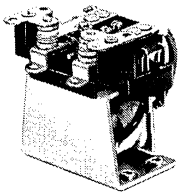
Industrial/Commercial Relays

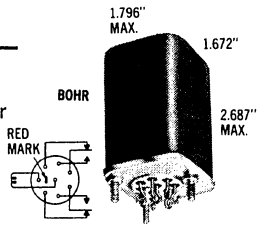
OPEN FRAME — BOT/BOY SERIES



Low Cost DPDT industrial relay. Heavy duty contact switching up to 15 amperes. AC versions use shading ring for 50/60 Hz operation. Weight: 5.0 to 9.0 ounces.

Catalog No.	Description	Contact Arrangement	Coils		Contact Rating
			Coil Res.	Input	
BOT-6A-24VAC BOT-6A-115VAC	AC	DPDT	17 445	24VAC 115VAC	15 Amp
BOT-6D-26.5VDC BOT-6D-110/120VDC	DC	DPDT	230 5,000	26.5VDC 110/120VDC	15 Amp
BOY-6D-26.5VDC BOY-6D-87VDC	Sensitive DC	DPDT	900 10,000	26.5VDC 87VDC	10 Amp

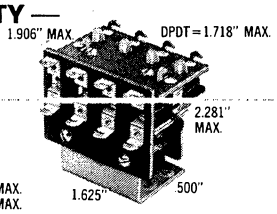
HERMETICALLY SEALED — BOHR SERIES



Hermetically sealed DPDT relay for industrial application in hostile environments. 50/60 Hz operation of AC version.

Catalog No.	Description	Contact Arrangement	Coils		Contact Rating
			Coil Res.	Input	
BOHR-6A-24VAC BOHR-6A-110/120VAC	AC	DPDT	17 445	24VAC 110/120VAC	15 Amp
BOHR-6D-26.5VDC BOHR-6D-110/120VDC	DC	DPDT	230 5,000	26.5VDC 110/120VDC	15 Amp

OPEN FRAME, HEAVY DUTY — PO SERIES



Low cost, up to 4PDT, industrial relay. Heavy duty contact switching up to 15 amperes. AC versions use shading ring for 50/60 Hz operation. Weight: 7.5 to 15.0 ounces.

Catalog No.	Description	Contact Arrangement	Coils		Contact Rating
			Coil Res.	Input	
PO-6A-24VAC PO-6A-110/120VAC	AC	DPDT	8 145	24VAC 110/120VAC	15 Amp

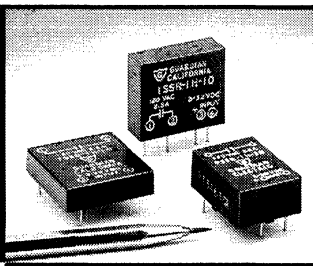
GUARDIAN® CALIFORNIA

An over 20-year pedigree in the design and fabrication of precision quality solid-state devices--including relays, timers, sensors and switches--assures you of dependability and performance at practical prices. And we excel in Hi-Rel custom configurations.

FSSR/ISSR/PSSR SERIES-2.5A

Switching full 2.5 ARMS loads, these compact, space saving SSRs are conveniently PCB mountable. Photo-isolated; "zero-voltage" switching; TTL compatibility; snubbered Triac output are highlight features.



INPUT
Signal Range: 3-32 VDC
Input Current: 5 mA
Response Time: 8.3 mS max.

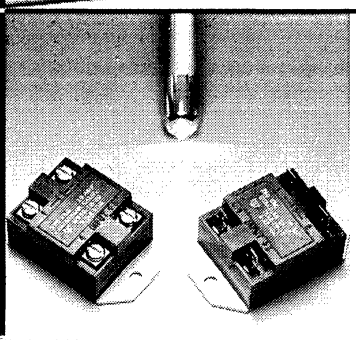
LOAD
Frequency Range: 47-65 Hz
Peak Voltage: 300 V (-1H) 500 V (-2H)
Transient dv/dt: 100V/μS

GENERAL
Operating Temp: −30 to +80°C
I/O Isolation: 1500 VAC
Weight: 0.8 oz. max.

Model No.	On/Off VDC	Load VAC	Load (40°C) ARMS
FSSR-1H-10	3/1	20-140	2.5
FSSR-2H-10	3/1	40-280	2.5
ISSR-1H-10	3/1	20-140	2.5
ISSR-2H-10	3/1	40-280	2.5
PSSR-1H-10	3/1	20-140	2.5
PSSR-2H-10	3/1	40-280	2.5

MSSR SERIES 5A/10A TSSR SERIES 2.5A/10A/20A/30A

Miniature SSRs are 50% smaller & lighter. The TSSR has quick-disconnect push-on terminals. Units feature photo-isolation, "zero-voltage" switching, and snubbered Triac output.



INPUT
Signal Range: 3-32 VDC
Input Current: 5 mA
Response Time: 8.3 mS max.

LOAD
Frequency Range: 47-65 Hz
Peak Voltage: 300V (MSSR-1B/TSSR-1H)
500V (MSSR-2B/TSSR-2H)
Transient dv/dt: 100V/μS

GENERAL
Operating Temp: −30 to +80°C
I/O Isolation: 2500 VAC
Weight: 1.5 oz. max.
Dimensions: 1.25" x 2.25" x .81"

MSSR-1I-10	3/1	20-140	5.0
MSSR-2I-10	3/1	40-280	5.0

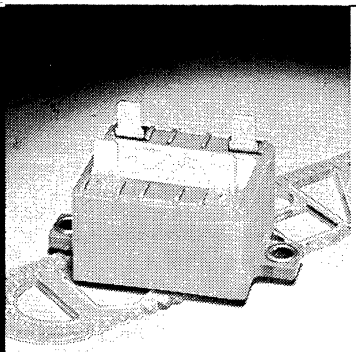
TSSR-2F-10	3/1	40-280	30.0

SSR/HSSR SERIES 7A/10A/25A

Featuring ruggedized cases with .250" quick-connect push-on terminals, these compact relays come in economical reed-switching input HSSR versions or photo-isolated, "zero-voltage" turn-on SSR models, with snubbered Triac outputs. They are compact and convenient to panel mount.



INPUT
Signal Range: 3.5-12 VDC (SSR)
4.2-10 VDC (HSSR)
Input Current:
35 mA max. @ 12 VDC (SSR)
27 mA max. @ 10 VDC (HSSR)
Response Time: 8.3 mS max. (SSR)
3 mS max. (HSSR)

LOAD
Frequency Range: 47-65 Hz
Non-Repetitive Peak Voltage:
300V (SSR-1A/HSSR-1A)
500V (SSR-2A/HSSR-2A)
Transient dv/dt: 250V/μS

GENERAL
Operating Temp: −25 to +70°C
I/O Isolation: 1500 VAC
Weight: 2.5 oz. max.
Dimensions: 1.5" x 2.6" x 1.0"

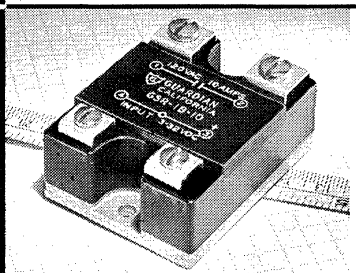
GSR SERIES 10A/25A/40A

These industry-standard housing panel-mount SSRs are fully encapsulated for general purpose industrial use. They feature photo-isolated inputs, "zero-voltage" turn-on, and have internal Triac snubbers.



INPUT
Signal Range: 3-32 VDC
Input Current: 18 mA max.
Response Time: 8.3 mS

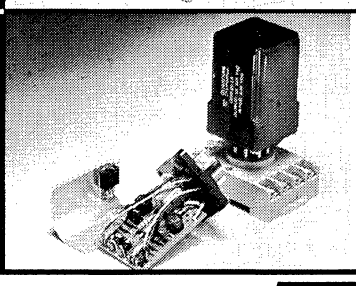
LOAD
Frequency Range: 47-70 Hz
Peak Voltage: 300V (-1B) 500V (-2B)
Transient dv/dt: 200V/μS

GENERAL
Operating Temp: −25 to +70°C
I/O Isolation: 2500 VAC
Weight: 4 oz. max.
Dimensions: 1.75" x 2.25" x .88"

GSR-1B-10	3/1	20-140	10
GSR-2B-10	3/1	40-280	10
GSR-1E-10	3/1	20-140	25
GSR-2E-10	3/1	40-280	25
GSR-1K-10	3/1	20-140	40
GSR-2K-10	3/1	40-280	40

OSR SERIES-5A

These plug-in mount units are Solid State replacements for 8-pin octal electro-mechanical relays. Features include: photo-isolation, "zero-voltage" turn-on, snubbered Triac output, and they have self-contained heat sinks. The units come in SPNO and SPDT versions.



INPUT
Signal Range: 3-32 VDC
Input Current: 5 mA
Response Time: 8.3 mS max.

LOAD
Frequency Range: 47-65 Hz
Peak Voltage: 500 VAC
Transient dv/dt: 100V/μS

GENERAL
Operating Temp: −30 to +80°C
I/O Isolation: 2500 VAC
Weight: 4 oz. max.
Dimensions: 2.18" x 1.38" square

OSR-1I-1A (SPNO)	3/1	20-140	5
OSR-2I-1A (SPNO)	3/1	40-280	5
OSR-1I-1C (SPDT)	3/1	20-140	5
OSR-2I-2C (SPDT)	3/1	40-280	5

Our cataloged Solid-State Relay products are available throughout the USA from over 100 authorized distributors. Contact your local Guardian rep or the factory for technical assistance with all your special SSR, timing, sensing and control development and procurement needs.

REED SWITCHES • SENSORS • REED HG & MOS RELAYS • LIQUID CRYSTAL DISPLAYS

SOLID STATE AND MERCURY-WETTED RELAYS

MINI-MOS RELAYS

- 100% elimination of RFI
- 100% elimination of Voltage Offset
- 100% elimination of False Triggering
- 100% immunity to DV/DT
- Optically isolated
- 6 Pin ½ Dip Package
- Can be parallel connected for higher load currents
- AC/DC in and AC/DC out

GENERAL ELECTRICAL CHARACTERISTICS
(common to all models).

Drop out voltage ..... 1.6 V.D.C. (Non-variable)
Off state leakage (7900-4 & 7901-4 not included)
1.0 μamp. ..... at rated voltage
0.3 μamp. ..... at 75% rated voltage
Maximum input reverse current ..... 20 ma.
Maximum input current (1 ms pulse) ..... 250 ma.
Input/Output capacitance ..... 3 pf @ 1 MHz
Input/Output Isolation ..... 2500 VAC
Insulation Resistance ..... $10^9\Omega$

NOTES:
1) Overcurrent condition will result in failure by open circuit.
2) Measured at rated load current and 15 ma input current.
3) Time from 15 ma input current on to 90% of rated load current.
4) Time from 15 ma input current off to leakage current level.
5) a — Overcurrent to 50 ma will not damage relay.
b — Undercurrents down to 5 ma will change operating parameters.
c — External resistor may be required to limit current.

ENVIRONMENTAL

Storage Temp. ... −55°C to +125°C
Operate Temp. ... −40°C to +70°C
Shock .... 50 g (11 ms ½ Sine Wave)
Vibration ..... 20 g (10-2000 Hz)

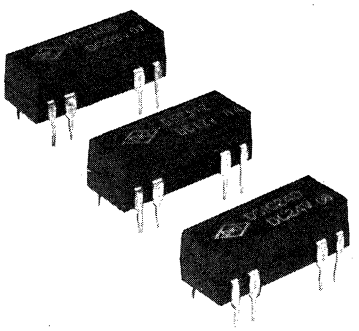
MERCURY-WETTED CONTACT RELAYS

Type	Relay	Terminal Type/Grid	Contact Forms	Description
	MM91	1.4/1.2 x .1	1C 2C	2 amp, 100 VA Bistable or single side stable
	MM92	1.4/1.2 x .1	1C 2C	Highest speed 1.2 ms operate time low noise, high repetition rate, 2 amp, 100 VA
	MM94	1.8/1.5 x .2 Staggered	1C, 1D 2C, 2D	2 amp, 100 VA Bistable or single side stable 120 Hz repetition rate
	ML95	3/2.4 x .2 Staggered	1D 2D	High current, 5 amp, 250 VA, 500 volt 80 Hz max. repetition rate, 1 nanosecond rise time
	MO93 MO97	8, 11, 14 pin octal plug	1C, 1D, 2C, 2D	2 amp, 100 VA sensitive mercury-wetted relay
	MO98	8 pin octal plug	1D, 2D 3D, 4D	High current, 5 amp, 250 VA, 500 volt contacts

HASCO COMPONENTS INC. / REED RELAYS

OKI electric industry company, ltd.



- De-activated rhodium contacts for stable contact resistance.
- Standard TO-116 Terminal Grid fits all standard DIP sockets.
- Interface directly with RTL, DTL, TTL, HTL logic.
- Molded epoxy package for environmental immunity.
- Automatic insertion compatible.
- Relay testing services test report available.

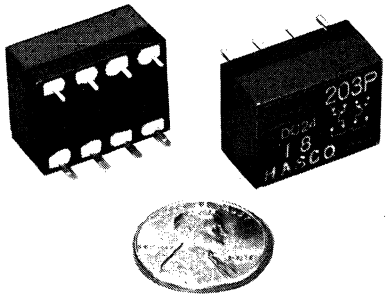
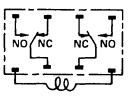
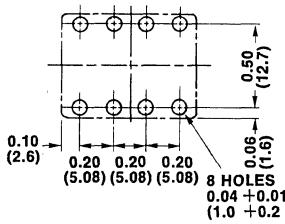
SSD203P RELAY SERIES

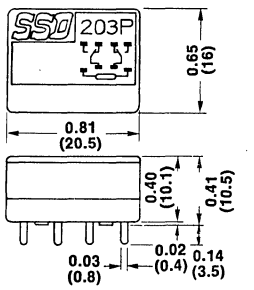


WIRING DIAGRAM

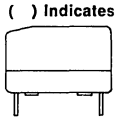


MOUNTING DIMENSIONS





( ) Indicates Millimeters



MAXIMUM LOAD RATING:
125V AC 3A, 250V AC 2.5A, 30V DC 3A and 5A

This double pole, double throw miniature relay gives 3 Amp or 5 Amp switching in a small package only .81″ x .65″ x .41″ (20.5 x 16 x 10.5mm) at low cost. It's the perfect answer for applications in Industrial Controls, Computer Peripherals and a wide range of others.

FEATURES

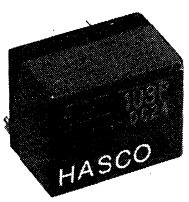
- Miniature Size: .81″ x .65″ x .41″, 20.5 x 16 x 10.5mm
- Printed circuit terminals
- Double pole, double throw
- Low cost
- Can be flow soldered

SPECIFICATIONS

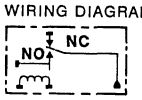
- Maximum Voltage: 120% of rated voltage at 20°C
- Must Operate Voltage: 75% of rated voltage at 20°C
- Coil Temperature Rise: 65°C max. at rated voltage
- Insulation Resistance: 100M ohm min. at 500V DC
- Dielectric Strength:
  2000V AC 1 minute between coil and terminal
  750V AC 1 minute between contacts
- Electric Life: 100,000 operations
- Mechanical Life: 10 million operations
- Contact Material: Silver alloy
- Contact Resistance: 100m ohm max. (4 to 6V DC, 1A)
- Operating Temperature Range: −10°C to +65°C

Rated Voltage (V)	5 DC	6 DC	12 DC	24 DC
Rated Current (mA)	120	100	50	25
Coil Resistance (Ω)	42	60	240	960

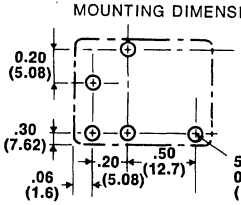
SSD103P RELAY SERIES

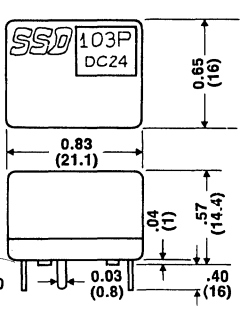


WIRING DIAGRAM

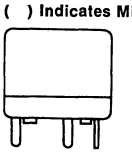


MOUNTING DIMENSIONS





( ) Indicates Millimeters



MAXIMUM LOAD RATING:
125V AC 3A, 250V AC 2.5A, 30V DC 3A
SSD105P (125V AC 5A type) also available

This single pole, double throw miniature relay gives up to 5 Amp switching in a small package only .83″ x .63″ x .57″ (21 x 16 x 14.4mm) at low cost. It is ideal for use in Computer Peripherals, Industrial Controls and a wide range of other applications.

FEATURES

- Miniature Size: .83″ x .63″ x .57″, 21 x 16 x 14.4mm
- Printed circuit terminals
- Single pole, double throw
- Can be flow soldered

SPECIFICATIONS

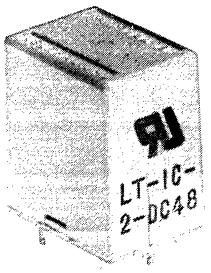
- Maximum Load Voltage: 150% of rated voltage at 20°C
- Must Operate Voltage: 65% of rated voltage at 20°C
- Coil Temperature Rise: 50°C max. at rated voltage
- Insulation Resistance: 250 ohm min. at 500V DC
- Dielectric Strength:
  2000V AC 1 minute between coil and terminal
  750V AC 1 minute between contacts
- Surge Voltage Resistance: 7000V DC min. between coil and terminals at 20°C 65% RH, 40 sec., 3 times
- Electric Life: 100,000 operations
- Mechanical Life: 20 million operations
- Contact Material: Silver alloy
- Contact Resistance: 70m ohm max. (4 to 6V DC, 1A)
- Operating Temperature Range: −30°C to +70°C

Rated Voltage (V)	6 DC	9 DC	12 DC	24 DC
Rated Current (mA)	75	50	37	18.5
Coil Resistance (Ω)	80	180	320	1280
Rated Current Tolerance: ±15%-20% at 20°C				

HASCO COMPONENTS INC.

RELAYS

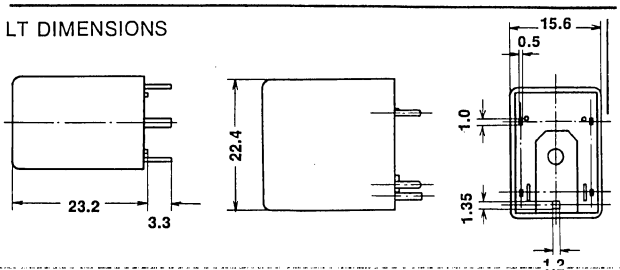
LYRE AND LT MINIATURE POWER RELAYS

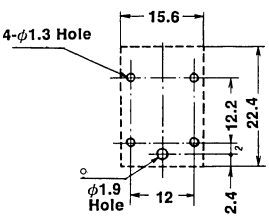


FEATURES

- Miniature, lightweight relay which requires less mounting space
- Large switching capacity like 2A, 5A, and 10A, matching for general purpose
- High reliable relay with dielectric strength, 2000V which employs the specific construction
- Economical and favorable price for simple construction

LT DIMENSIONS



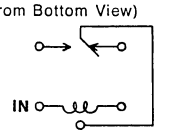


LT-1C-2-DC 24

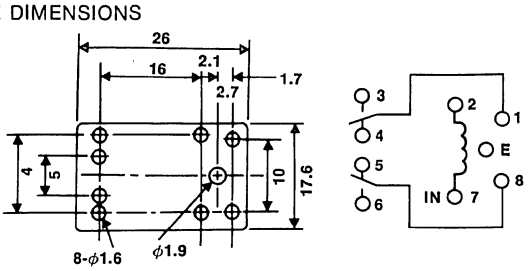
Load Current
2: 2 Amp
5: 5 Amp
10: 10 Amp

Rated Voltage
6, 9, 12, 24, 48

INTERNAL WIRING DIAGRAM
(From Bottom View)



LYRE DIMENSIONS



LYRE CONTACT SWITCHING CAPACITY

Load Current	Max. Applied Load: Voltage (V)	Max. Applied Load: Current (A): Resistance Load (PF=1)	Max. Applied Load: Current (A): Inductive Load (PF=0.4)	Electrical Life
2A	AC 120 DC 24	2	0.8	More than 100,000 times
5A		5	2.0	More than 150,000 times

GENERAL CHARACTERISTICS

Contact Material: Gold plated on silver for 2A — Silver cadmium oxide for 5A
Ambient Temperature: −20 to +60°C (not to freeze)
Ambient Humidity: 45 to 85% (not to be dewy)
Operating Time: Less than 20 mS
Release Time: Less than 20 mS
Contact Resistance (at initial): Less than 100 milliohms at 6V DC, 1A
Insulation Resistance: 500V DC, more than 100M Ohms
Dielectric Strength: Between contacts; 500V AC (50/60 Hz) 1 minute — Between coil and contact; 2,000V AC (50/60 Hz) 1 minute
Vibration: 6G (10 to 55 Hz)
Shock: 10G
(The above mentioned values are at normal temperature and humidity)

LYRE CHARACTERISTICS

Contact Arrangement: DPDT (Form C)
Power Consumption: DC 1W; AC-50 Hz 1VA AC-60 Hz 0.85VA
Temperature Rise: DC, Less than 50 deg at rated voltage; AC, Less than 60 deg at rated voltage
Mechanical Life: More than 10 million times

LT CHARACTERISTICS

Contact Arrangement: SPDT (Form C)
Power Consumption: Approx. 0.36W to approx. 0.5W
Temperature Rise: Less than 40 deg after applied max. continuous voltage

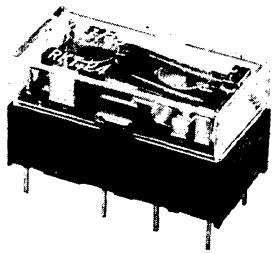
RELAYS

TYPE HAS/RKT RELAY—Recommendable Miniature Relay for P.C. Board Mounting



FEATURES

- Miniature DPDT relay just fitting for P.C. board mounting and makes it possible to minimize the equipment.
- Flow solder is available.
- Employing 16 Pin, IC pitch and very easy to design the P.C. board.
- Very reasonable price.
- Seal type is also available.

DIMENSIONS

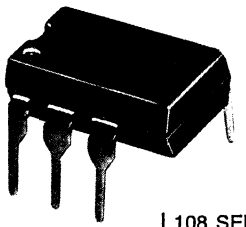
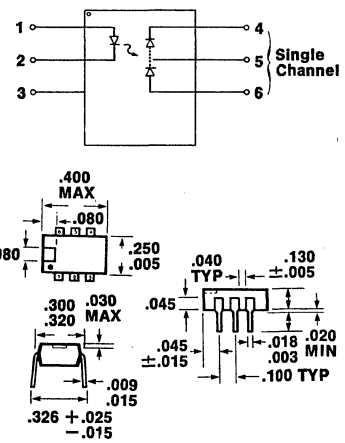
HASCO COMPONENTS INC.

RELAYS

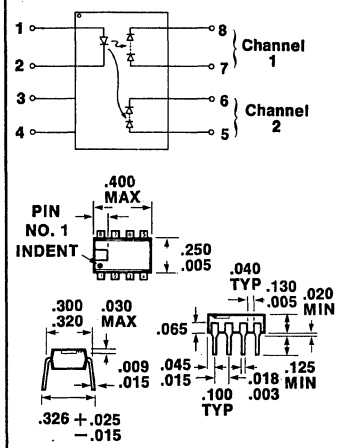
PHOTEC AC/DC SOLID STATE RELAY 107/108 SERIES NEW



107 SERIES



108 SERIES



FEATURES

- Relay is current sensitive on input stage and can be used with either 5, 12, 24 and 28 volt systems
- Low Cost.
- TTL Compatibility.
- Optical Isolation, to 2500V AC.
- No false turn-on.
- Low offset voltage, able to switch low and high level.
- Low off-state leakage current.
- Ability to switch AC or DC, up to 600V.
- High transient immunity.
- Packaging flexibility, plastic mini-dip or metal can TO-5.
- Absence of switching RFI.

DESCRIPTION

The PHOTEC 107 is a State-Of-The-Art AC/DC solid state relay incorporating an infrared LED input, and a photovoltaic diode array connected to the gates of a pair of high voltage MOSFETS as the output. The photovoltaic diode array is a series-connected group of photosensitive diodes, which are electrically isolated from, but optically coupled to, the input LED. Input/Output isolation is rated at 2500 V-RMS.

When activated, the LED emits infrared light toward the photovoltaic diode array, which then responds with a self-generated open circuit voltage, V_{OC}, proportional to the input current. This V_{OC}, which is floating and completely isolated from any power supply, is applied to the gates of the MOSFETS. At the proper value of input LED current, the generated V_{OC} is sufficient to turn on the MOSFETS and cause the relay to conduct. The relay is current sensitive on input stage and can be used with either 5, 12, 24 and 28 volt systems.

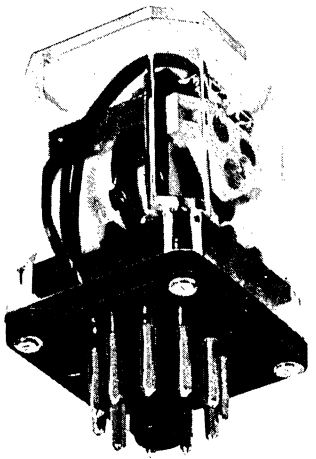
GENERAL PURPOSE RELAYS
ECONOMY PLUG-IN TYPE — SERIES PR



General purpose relay enclosed in a clear polycarbonate dust cover. The PR Relay is a ruggedly constructed, UL recognized relay; available in contact arrangements up through 3 form C (3PDT) and with a mechanical life of 10 million operations, minimum. Approximate weight: 3 oz. (85 g). Other features include:

- Manual test access standard
- Anti-shock base construction
- Indicator lamp available
- Extremely low priced

Technical Specifications

GENERAL:

OPERATE TIME
15 ms. max. @ nominal voltage
RELEASE TIME
10 ms max.
LIFE EXPECTANCY

Mechanical: 10 million operations
DIELECTRIC STRENGTH
1500 VRMS 60 Hz Hipot test between all elements
INSULATION RESISTANCE
100 M Ω minimum
TEMPERATURE RANGE
PR relays will operate continuously in ambient temperatures of −45° to 75° C for D.C. coils and −45° to 55° C for A.C. coils.

CONTACTS:

CONTACT RATING/MATERIAL

Contact material	Ag-CdO (other materials on request)
Contact rating (Resistive)	10 A @ 240 VAC max.
Contact rating (Inductive)	¼ H.P. @ 240 VAC - 1 phase.

CONTACT ARRANGEMENTS
All types of the Series PR are available in standard contact arrangements up to 3PDT.

AGENCY APPROVALS:

U.L. recognized

COIL DATA:

COIL VOLTAGE/RESISTANCE

	D.C. COILS		A.C. COILS
VOLTS	D.C. RESIST-ANCE	VOLTS	D.C. RESIST-ANCE
6	29	6	4.2

CONTACT DATA

Arrangement — 1 Form A, B or C 10 Amp (VS)
2 Form A, B or C 5 Amp (VB)

Material — Silver Nickel (Standard)

Rating — 5 or 10 Amp at 24V DC or 240V AC
⅙ or ⅓ HP 120V AC motor load

Inrush Current — 51 or 78A at 120 V AC

Max. Carrying Current — 7A or 14A

Life Expectancy — Mechanical 5 million operations
Electrical: 100,000 operations at 5 or 10A 24V DC or 240V AC
200,000 operations at 5 or 10A 120V AC resistive
3.5 or 7A 24V DC or 240V AC
30,000 operations at ⅙ or ⅓ 120V AC motor load

COIL DATA

Nominal Voltage — 3 to 60V DC

Power (at 20°C) — Nominal: 0.72W Standard Type
0.53W High Sensitive Type
Operate: 0.35W Standard Type
0.26W High Sensitive Type
Maximum: 1.4W

GENERAL

Dielectric Strength — Min. 1000V AC between open contact
Min. 5000V AC between all other conductors

Insulation Resistance — Min. 1000MΩ at 500V DC between conductors

Surge Strength — 10,000V

Temperature Range — (TV types) −30°C to +50°C
(Standard types) −30°C to +65°C
(Sensitive types) −30°C to +75°C

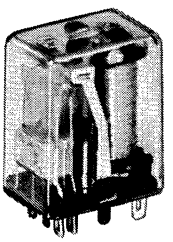
Miniature Cradle Type Relays

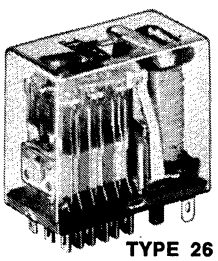
Replaces R10, W67, AZ400, 70, T154/T163, K, MHS

- **One Piece Core and Yoke** giving improved magnetic efficiency and stability
- **One Piece Bobbin and Terminal** gives rigid coil terminations
- **Polycarbonate Insulation** — negligible moisture absorption ensuring stability of spring-set adjustment
- **Underwriters Laboratories Recognized (#E57102)**
- **CSA Approval (LR 38310-1)**

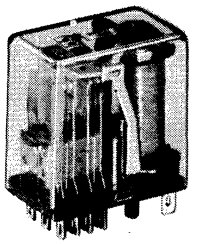
ITT Type 24/25/26 miniature relays are fully interchangeable in form fit and function with all well known cradle types. 2, 4 and 6 Form C is standard; 2, 4 or 6 Form A or B is available on request. A variety of contact materials is available in single and twin light duty. Heavy duty single contacts and sensitive versions, are also available.



TYPE 24



TYPE 26



TYPE 25

Several options are available to meet different load requirements. Single silver contacts are excellent for loads up to 2A. Twin (bifurcated) contacts should be used for carrying low loads, 100mA and lower (dry circuits). Heavy duty single cadmium oxide contacts give 5A ratings. Twin contacts are available in gold alloy or fine silver. Dimensions: L — .95″ (24), 1.18″ (25), 1.4″ (26); W — .74″; H — 1.2″

ITT Components

A Unit of International Telephone and Telegraph Corporation

Solid-State Relays

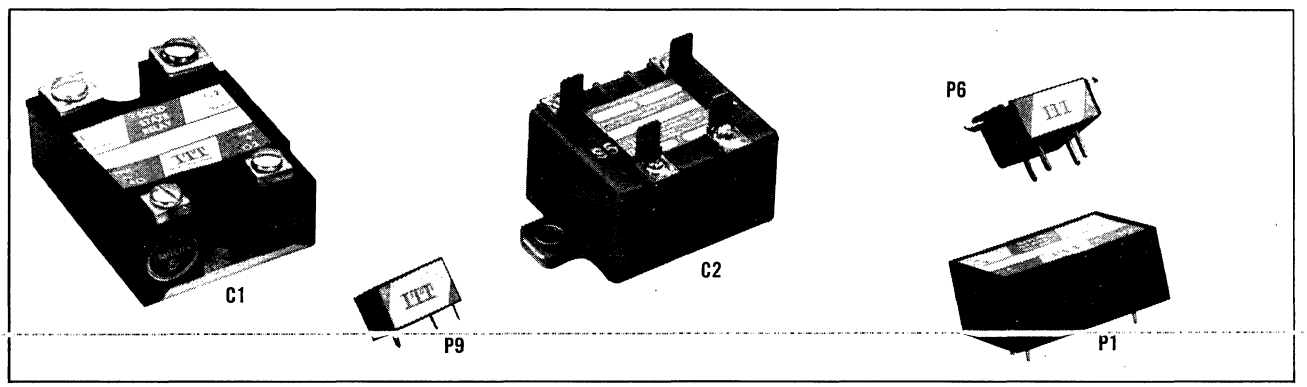
ITT Components offers a full line of Solid-State Relays to cover a wide range of switching and isolation applications where long life, environmental ruggedness, low RFI, no contact bouncing and logic circuitry compatibility are prime requisites.

These SSRs feature:

Photo-transistor or reed relay coupling.
Various chassis mounting or printed circuit board mounting housings.
AC switching.
Zero-crossing or random switching.

AC output models can switch:
Voltages of 120, 240, 330, 480V AC.
Currents of 0.5, 2, 3, 7, 10, 25 or 30A AC.

A full line of input-output modules (DC and AC input as well as DC and AC output) to fit microprocessor based controls is also available.
Do not hesitate to call us for any additional information you might need.



PACKAGE	INPUT VOLTAGE	INPUT TYPE	COUPLING	OUTPUT VOLTAGE	OUTPUT TYPE OF SWITCHING	OUTPUT CURRENT
C1	5	D	RC	120	R	10

PACKAGE	INPUT VOLTAGE	INPUT TYPE	COUPLING	OUTPUT VOLTAGE	OUTPUT TYPE OF SWITCHING	OUTPUT CURRENT
CHASSIS MOUNT C1 C2 PRINTED CIRCUIT MOUNT P1 P6 P9	3(3-32) 5 12 24 120 240	D → DC A → AC	PC- PHOTO TRANSISTOR COUPLED RC- REED RELAY COUPLED	12 120 240 330 480 V AC	X- ZERO CROSSING SWITCHING R- RANDOM CROSSING SWITCHING	0.5 1 2 3 7 10 25 30 A-AC

Example: C1-3D-PC-240X10

A Chassis mount, "hockey-puck" housing, the input circuit is driven with 3-32V DC, and it switches a 240V, 10A output triac. The relay features photo-transistor coupling, and zero cross-over switching.

vacuum relays

ITT Jennings manufactures Vacuum and Gas Relays to exacting standards for use in transferring high voltage circuits. They are available in voltage ranges up to 30 KVAC, with up to 75 A. current ratings, and with operating frequencies through the VHF band. These relays are widely used in airborne, mobile and marine communications where their characteristics are particularly desirable. They have high operating speeds, withstand high voltages and carry heavy currents with high reliability ... without developing high contact resistance or generating electrical noise. The majority of applications for these relays includes the switching of antennas, frequency bands, transmit/receive modes, power circuits and elements in pulse forming networks.

ITT Jennings also produces a line of defibrillator (or capacitance discharge) vacuum relays used in medical defibrillation units, or any application that calls for a capacitor discharge circuit — research lasers and communications power supplies for example. Operating characteristics are shown under relay type RGD1 through 9.

vacuum coaxial relays

ITT Jennings manufactures a broad line of coaxial relays for use where circuit currents must be contained completely within a coax system. Vacuum coaxial relays have high power handling capabilities at frequencies up to 600 MHz.

These relays and switches have characteristics that are well suited to airborne, marine and mobile communication systems, as well as fixed installations. Characteristics include: • Low insertion loss and VSWR • High RF power capability • High isolation • Fast operation • Low, stable contact resistance • No noise generation or IM distortion • Extreme high reliability combined with ruggedness for high altitude or heavy vibration environments • Small size and lightweight for their power handling capacity • Wide band-pass characteristics. Typical applications for these units might include multiple antenna-transmit switching systems such as high speed switching from omnidirectional to directional antennas, transmit-receive switching, and where elements are to be switched in transmitter and receivers. Other applications include crossbar matrices and switching trees.

DIVISION OF INTERNATIONAL TELEPHONE AND TELEGRAPH CORPORATION

MINIGLOSSARY ELECTROMECHANICAL RELAYS

RELAYS

Hybrid: Isolated input and output either with a solid-state input and an electromechanical output or vice versa. Typically a reed switch is used to trigger a solid-state output or a solid-state amplifier is used to trigger an electromechanical relay.

Differential: Have multiple windings to function when voltage, current and/or power difference reaches a specific level or value.

Close-differential: The dropout value is specified close to the pickup value.

Frequency sensitive: Operates at a set frequency or within specific frequency bands. A resonant reed, for example.

Hermetically sealed: Totally sealed by glass-to-metal or metal-to-metal seals to ensure very low rates of gas leakage over long time periods.

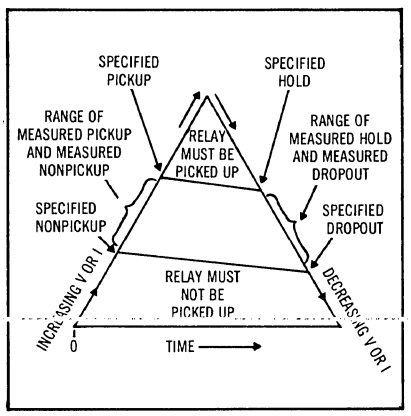
Encapsulated: Imbedded in a suitable potting compound.

Sealed: Enclosed in a relatively airtight cover. (Not the same as hermetically sealed.)

Covered: Unsealed metal or plastic enclosure or housing.

CONTACTS

Dry circuit: contacts that carry current but do not open or close during energizing of the load circuit. Often wrongly used in reference to low level contacts.



Low Level: Contacts controlling relatively low voltages and low currents. Generally below 5 Vdc and 10mA.

OPERATING CHARACTERISTICS

Measured dropout: The value at which all contacts restore to their unoperated position as current or voltage decreases.

Specified dropout: The value at or *above* which all contacts *must* restore to their unoperated position as voltage or current is decreased.

Specified hold: The value that *must* be reached before any contact change occurs as voltage or current is decreased on an operated relay.

Specified nonpickup: The value that *must* be reached before any contact change occurs as voltage or current decreases on an unoperated relay.

Measured pickup: The value at which all contacts function as voltage or current increases on an unoperated relay.

Specified pickup. The value at or *below* which all contacts *must* function as voltage or current increases on an unoperated relay.

Sensitivity: Specified pickup expressed in watts.

Normal bridging: The make-before-break action between adjacent contacts on relays designed for this purpose.

Abnormal bridging: The undesired closing of contacts caused by a metal bridge or protrusion developed by arcing.

Magnetic freezing: Sticking of the armature to the core as a result of residual magnetism.

TIME

Actuation: The interval from coil energization or de-energization to the functioning of a specified contact.

Initial actuation: The interval from coil energization or de-energization to the *first* closing or opening of a previously open or closed contact.

Final actuation: Sum of initial actuation *and* bounce intervals following an actuation.

Contact bounce: The interval from close or opening of a contact to the end of the bounce of "chatter."

Chatter: See bounce.

Operate: Normally taken as the interval between energization and the opening or closing of the last contact to function not including bounce.

Release: Normally taken as the interval between de-energization and the opening or closing of the last contact to function excluding bounce.

Transfer: The interval between opening a closed contact and closing an open contact of a break-before-make relay.

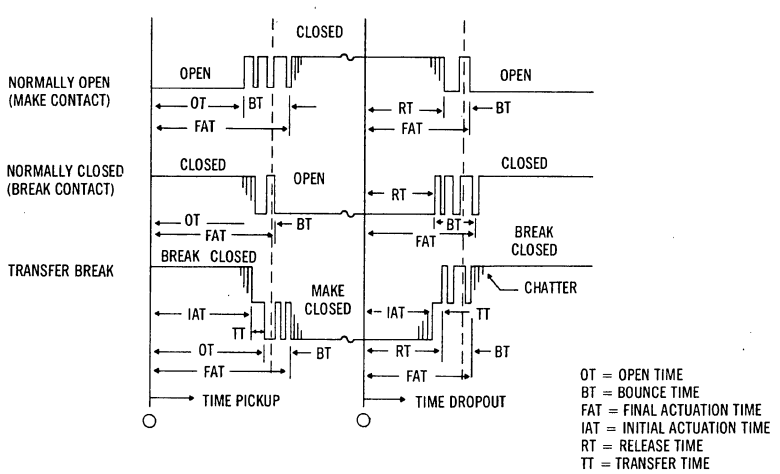


Fig. 2. Typical time vs. current (non-inductive load)

High Voltage Relays

Applications

The capability to rapidly switch high voltages in a small package makes Kilovac® relays especially well suited for applications in ECM, communications, sonar and radar pulse forming networks, heart defibrillators and other capacitive discharge circuits, electrostatic coating equipment, laser and x-ray power supplies, digital antenna couplers (tuners), automatic dielectric-strength test equipment, and other high voltage equipment, or low voltage applications where extreme reliability is required.

Vacuum as a Dielectric

Since most high voltage arcs are initiated by ionization of the insulating medium, absence of any such medium (i.e., a hard vacuum) produces the greatest possible isolation between contact electrodes. In a vacuum of 10^{-8}mm of mercury, dielectric strengths can be achieved on the order of 2000 V/mil. A vacuum dielectric has the additional advantage of providing an inert (i.e., nonoxidizing) atmosphere in which high voltage contacts operate.

Low Contact Resistance

In conventional relays, contact resistance is variable from cycle to cycle. In Kilovac vacuum relays, it remains low and stable over the life of a relay (.015 ohms typical). Stability and low resistance are attributable to uniform cleanliness of parts, lack of oxidation or contamination, and use of only pure metals in the contact areas. Contact maintenance is never required.

Kilovac® Corporation

High Voltage Relays

Small Size and Weight
The small contact gap and short contact travel possible with a vacuum dielectric result in minimal package size and weight.

Safety
Because contacts are sealed within the high voltage envelope, switching may be safely accomplished in explosive atmospheres.

Fast Switching Time
10 ms typical, due to small contact gap and short armature travel.

Electronegative Gas as a Dielectric
Kilovac gas-filled relays are pressurized with an electronegative gas mixture. This insulating medium offers several advantages, including high voltage isolation capability in a compact package. The primary advantage is its ability to suppress arcing in heart defibrillator and other capacitive discharge circuits.

Kilovac Medical Relays
Since 1964 Kilovac has produced and delivered thousands of high voltage relays especially designed for heart defibrillators. Kilovac produces several models of patient relays, safety discharge relays, and ECG relays, as well as a multifunction relay capable of performing all of these switching functions in a defibrillator.

Kilovac® Corporation

Coaxial Relays

Applications
Dow-Key® relays are widely used for applications in air traffic control radios, CATV and CCTV systems, microwave communications, remote tone signal switches, satellite terminals, switching matrices, and RF test equipment.

Options
Each relay series has a variety of options available including different connector types, coil voltages, and auxiliary (indicator circuit) contacts. Standard coil voltages are 12 VDC, 26.5 VDC, and 115 VAC on most relay series. Other coil voltages are available on special order; consult the factory customer service representative for any special requirements you may have.

Power Switching (Hot-Switching)
Power ratings are for CW power carry only. Dow-Key relays are not designed for switching under load, although it may be possible to do so at low power levels. Consult the factory for information about power switching requirements.

Relay Impedance
Relay impedance is nominally 50 ohms unless otherwise specified. The addition of a 50 ohm relay in a 75 ohm or higher impedance line will generally result in negligible discontinuity at frequencies up to 300 MHz, because the length of the RF path through the relay is a small fraction of the signal wave length. Above 300 MHz it is increasingly important that the relay impedance be the same as the line impedance.

Microwave Relays

Applications
Dow-Key 400 series relays are designed for superior performance in microwave communications networks, laboratory instrumentation, high frequency test equipment, and CATV and satellite terminals.

Mechanical VS Solid State
Compared to diode or ferrite switches, coaxial relays offer the advantage of higher power handling capability, higher isolation and lower insertion loss over a broad frequency range. Operate time for Dow-Key relays is typically 10-15 ms.

Reliability
Dow-Key relays have been preferred for rugged military applications and commercial communications equipment for nearly thirty years. A balanced armature design makes Dow-Key Microwave relays well-suited for operation in severe environments. All connectors and sub-assemblies are manufactured by Dow-Key to ensure optimum conductivity and low insertion loss throughout the life of the relay.

If You Don't See What You Need
Call us. Kilovac® has many products in addition to the ones shown on this page. If we don't have a relay to fit your exact requirements, Kilovac has an experienced engineering staff available to design and produce a relay to your specifications.

SUBMINIATURE RELAYS

Leach subminiature relays have set the industry standards for technology and reliability for decades. With their proven high performance in the most demanding applications, they are ideal for your critical subsea, shipboard, ground-based and aerospace applications.

Our Balanced Force™ subminiature relays are rugged, high-environment relays for applications where size, weight and reliability are important. For systems where size and weight are critical, our Series III subminiature relays are the smallest, lightest aircraft relays made with their contact ratings, and are 40% the size and weight of our J and K Series relays, yet offer the same high performance. Both relay types are available in a variety of termination, mounting and operating configurations.

POWER AND CONTROL RELAYS

Leach power and control relays have been used for decades in commercial and military aircraft, trucks and buses, ships and tanks—any application that calls for proven durability, high performance and long life.

To ensure that you get the right relay for your application, our power and control relays are available in a broad range of configurations. You can choose from various terminal and mounting styles, dust and moisture resistant and hermetically-sealed enclosures, and a variety of operating ratings and characteristics.

ELECTRONIC TIME DELAYS AND SENSORS

To simplify systems interfacing and integration, we have a complete custom facility for the design and production of timing and sensing systems.

They are available with Leach MIL-Standard relays or special solid state outputs, manufactured with discrete circuitry or thick film hybrids manufactured to MIL-STD-883, Class B requirements.

In addition to the standard products shown below, we can provide:

—Combinations of voltage, frequency and phase sequence detection with built-in time delays for systems monitoring.

—Solid state relays with up to 3PNO contacts and ratings up to 25 amperes to MIL-STD-704 power requirements.

—Relay drivers for multiplex interface and isolation, conforming to MIL-R-28776.

—Solid state switching devices, ac and dc motor controllers, circuit breakers, current sensors and remote power controllers.

—Build to print hybrid, discrete /hybrid, and discrete designs available.

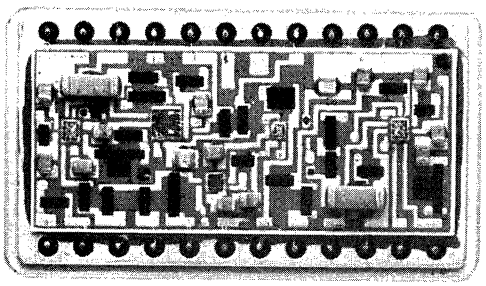
HISTORY OF HIGH QUALITY ELECTRONICS

The need for high quality thick film hybrid microcircuits for aerospace and military applications lead to Leach Corporation's entry into the field in the early 1970's. The initial 400 square foot engineering lab has evolved into a 22,000 square foot facility housing both engineering and total manufacturing capabilities.

Products include both analog and digital circuitry for interface and switching applications, and consist of both proprietary Leach products and customer designed custom hybrids.



MANAGEMENT PHILOSOPHY

Primarily designed for high reliability applications, products are manufactured to MIL-STD-883 requirements. Military environmental specifications and criteria are standard Leach practice, and products are qualified to MIL-R-83726, MIL-M-38510, and NASA standards.

ENVIRONMENTAL TESTING / QUALITY CONTROL

Within a building separate from the manufacturing area, the environmental test lab continuously maintains Leach QPL listings and conducts qualification testing to customer requirements.

Testing in accordance with MIL-STD-202 includes:

- Sine vibration with concurrent temperature testing
- Shock
- Altitude/temperature altitude
- Thermal shock and temperature cycling
- Load and life testing

HYBRID MANUFACTURING FACILITIES

Total facilities for all aspects of thick film hybrid manufacturing as well as hybrid/electromechanical interfacing are contained within the manufacturing area.

- Screen and firing
- Trimming
- Wire bonding
- Eutectic and epoxy die bonding
- Reflow soldering
- Photo processing
- Computerized testing of hardware
- Laminar flow benches
- Inert storage atmosphere

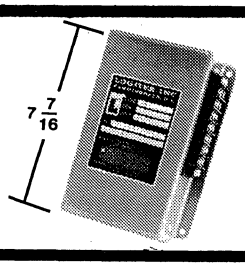
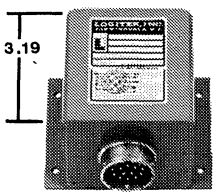
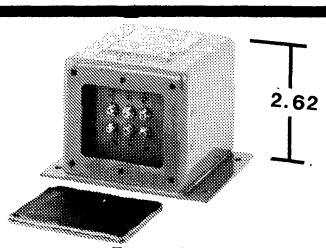
ELECTRONIC MONITORS & CONTROLS

POWER MONITORS • AC & DC VOLTAGE MONITORS • FREQUENCY MONITORS • PHASE MONITORS







APPLICATIONS

Logitek power monitoring equipment is used to continuously monitor the characteristics of AC and DC electric power systems for conformance to their design acceptable limits. This type of continuous surveillance is of particular importance in such systems where undetected power line malfunctions could cause major system failure, utilization equipment malfunction, or erroneous operation. Without continuous monitoring, utilization equipment operators are often unaware that their equipment is malfunctioning or of its slow degradation until functional failure.

EQUIPMENT TYPES

Individual units are available to monitor AC or DC voltage, line frequency, phase to phase voltage unbalance and phase angle unbalance, each for both high and low limits, or to monitor for phase loss and/or reversal. "Power Monitors" are also available incorporating any combination of these monitoring functions within a single unit. Units generally fall into two categories: those in which the limits of high and low voltage, frequency and pick-up and drop-out time delay are factory pre-set, and those in which the limits are factory set, but field adjustable. Models are also available with two limit sets, one set for abnormal condition limits and a second set of limits for emergency conditions.

OPERATING CHARACTERISTICS

The equipment is connected to the power line to be monitored where it continuously measures the desired characteristics. Should any one of these characteristics exceed the pre-set acceptable limits, the drop-out time delay will begin. If the condition persists for a time longer than the drop-out time delay, the output control circuit will de-energize. Once the control circuit de-energizes, the power line must return to normal for a time exceeding the pick-up time delay before the control circuit will re-energize. In the case of phase loss or reversal, however, the control circuit will de-energize immediately bypassing the time delay circuits. Control circuits normally consist of relay contacts, but various logic levels can also be provided. Standard units are generally supplied with a single control circuit responsive to any type anomaly, however, equipment providing many variations can be specified for particular applications. Examples of variations include control circuits which provide a logic level output, a separate output for each characteristic being monitored, both real time and delayed time signal outputs and manual reset or override capabilty.

SPECIFICATIONS

ELECTRICAL

Input Voltage	28 VDC, 120/208, 120/240, 277/480 VAC
Input Frequency	50/60/400 HZ
Sense Voltage	As Required
Sense Frequency	As Required
Accuracy	±1%, ±5%
Phase Sequence	A + B + C
Phase to Phase Voltage Unbalance/Phase Angle Shift	5-10%
Time Delay (Pick-Up and Drop Out)	250 Milliseconds to 10 Seconds, factory set or field adjustable
Relay Contacts	DPDT, 3PDT
Contact Rating	2 Amp, 10 Amp

PHYSICAL

Finish	Gloss Blue #15177, FED-STD-595, Meet or exceed MIL-E-5556 or 5557
Connector	Glass to Metal Seal Solder Hooks, MS3113H-20-16PN Connector, Barrier Strip

ENVIRONMENTAL

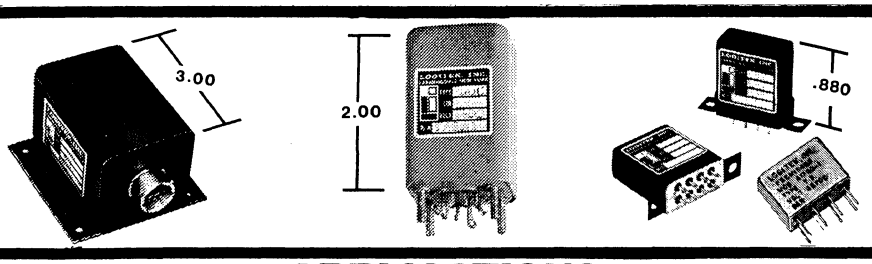
Temperature	−55°C to +125°C, −40°C to +85°C, −10°C to +70°C
Vibration	Per MIL-E-5272, Procedure II, 10 - 80 HZ @ .06" D.A. 80 - 2000 HZ 20g's
Shock	Per MIL-E-5272, Procedure V, 50g's 11 ± 1 Millisecond, any axis
Acceleration	Per MIL-E-5272, Procedure I, 20g's Steady state, any axis
Humidity	Per MIL-E-5272, Procedure I
Altitude	Per MIL-E-5272, Procedure IV, Condition F, 100,000 Feet
General	Per MIL-E-5400R, Class 4 except Paragraph 3.1.29

LOGITEK INC.

42 CENTRAL AVENUE, FARMINGDALE, NEW YORK 11735 516-694-3080

ELECTRONIC MONITORS & CONTROLS

TIME DELAY RELAYS • SOLID STATE FLASHERS • REPEAT CYCLE & INTERVAL TIMERS



APPLICATIONS

The design of complex electrical distribution systems often requires that certain operations be delayed or sustained for a precise interval of time from occurrence of a control or initializing signal. Combinations of various timing devices can be used for sequential startup or shutdown programs, load transfer or shedding, or delayed transfer to avoid race conditions. In addition, pulsers, interval timers, and flashers are used in applications such as operating instrument panel warning lights or other annunciator devices, landing gear, door open indicators and navigation lights.

EQUIPMENT TYPES

Several timing functions are available to facilitate the different timing and sequencing requirements ordinarily required. These include "delay on make," providing a time delay from application of the control signal to output circuit energization; "delay on break," providing immediate energization which sustains for a timed interval; "delayed interval," providing a delay on make followed by a timed "energized" interval and then return to the de-energized state. "Controlled" timers generally fall into two categories: timers which produce an immediate transfer of the control circuit upon application of a control signal and then a time delayed release after removal of the control signal and "true delay on break" timers which generate a timed interval and relay transfer after removal of all operating power.

OPERATING CHARACTERISTICS

Logitek timing devices are generally CMOS integrated circuits appropriately protected from line transients and other line perturbations and either a solid state or electromechanical relay output circuit. Since there are no large capacitive timing or storage elements in these devices, recycle times (the time after control removal which will cause a new timing cycle within specified accuracy) are very short. In addition, the use of CMOS IC digital counting circuits allows the use of very stable timing elements resulting in excellent stability through wide temperature ranges.

SPECIFICATIONS

ELECTRICAL

Acceleration	Per MIL-E-5272, Procedure I, 20g's Steady state, any axis
Humidity	Per MIL-E-5272, Procedure I
Altitude	Per MIL-E-5272, Procedure IV, Condition F, 100,000 Feet
General	Per MIL-E-5400R, Class 4 except Paragraph 3.1.29

• QUALITY ASSURANCE

Logitek equipment is manufactured in accordance with

- MIL-Q-9858A
- MIL-I-45208

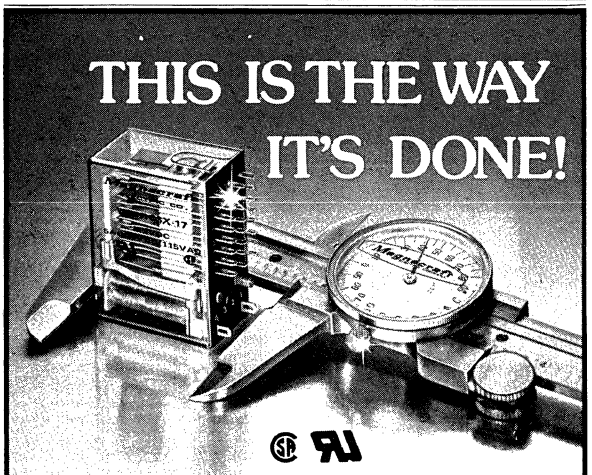
All production equipment undergoes a 100 hour burn-in schedule to insure in-service reliability.

• APPLICATIONS

- Aircraft, Electrical Systems
- Mobile Radar Systems
- Equipment Test Stations
- Tanks
- Mobile Missile Launchers
- Offshore Drilling Rigs
- Computer Systems
- Shipboard Electrical Systems
- Hospital Auxiliary Power Systems

• SPECIAL PRODUCTS

Logitek's engineering department is available to discuss your application of our product or to design special equipment to satisfy your system requirements.

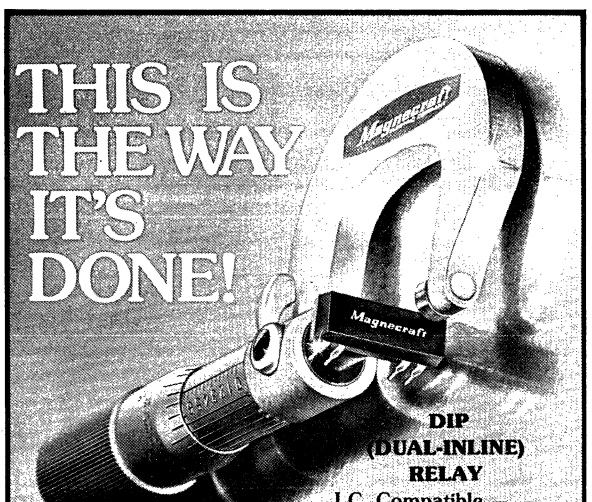


CLASS 67 MINIATURE INDUSTRIAL RELAY
Long Life and Reliable Service

- **5 AMPS:** DPDT to 8PDT
- **Control Voltages:** 5VDC to 110VDC, 6VAC to 115VAC Standard.
- **Terminals:** Plug-in/solder type and printed circuit.
- **Mating sockets available.**

71 different models are **IN STOCK** for immediate delivery.
Write for your **FREE RELAY CATALOG.**

CLASS 65 LOW PROFILE RELAY
Immersion Proof
Flat Pak or Upright Mounting
Contacts: 10 AMPS @ 250 VAC, SPDT
Standard control voltages of 5, 6, 12, 48 VDC.
16 Different Models are **IN STOCK** for Immediate Delivery.
Write for your **FREE RELAY CATALOG.**



DIP (DUAL-INLINE) RELAY
I.C. Compatible — Immersion Proof

Control Voltage: 5, 6, 12, 24VDC Standard

Standard Contact types:
SPST-NO DPST-NO SPST-NC SPDT DPDT

Options: **A.** Internal Clamping diode
B. Electrostatic shielding
C. 14 Pin arrangements
D. Mercury wetted

89 DIP Models **IN STOCK** for immediate delivery!
Write for your **FREE RELAY CATALOG!**

CLASS 199 POWER RELAY
Up to 50 AMP Switching

Standard Control Voltages:
5 to 240 VAC
6 to 220 VDC

Contact Combinations:
DPDT DPST-N.O.
SPST-D.M.
SPDT SPST-D.B.

41 Models **IN STOCK** for immediate delivery!
Write for your **FREE RELAY CATALOG.**

Magnecraft®
ELECTRIC COMPANY

5575 North Lynch Avenue, Chicago, Illinois 60630
(312) 282-5500 TWX-910-221-5221

MAGNECRAFT ELECTRIC CO. PRODUCTS INCLUDE: Low Profile Relays, Miniature Industrial Relays, Miniature Printed Circuit Relays, General Purpose and Power Relays, General Purpose Industrial Relays, Molded In-Line Packaged Reed Relays, Dual In-Line Packaged Reed Relays, Solid State Relays, Mercury Displacement Relays, Time Delay Relays, Coaxial & R.F. Switching Relays, Telephone Type Relays, Actuators and Buzzers.

Midtex is out to fold, spindle and eliminate relay *back-orders.*

When you need a relay the last thing you want to hear is: "Sorry, it's on **back-order.**"

Midtex and its franchised distributors are committed to eliminating the **back-order** and providing you with the best possible customer service and support.

To make sure we're successful, Midtex has recruited the finest distributors in the electronics industry, and backed them with a million dollar investment in inventory, equipment and service personnel. In addition, each Midtex distributor offers you these exclusives:

- **On-shelf inventory** of the most commonly needed relays and timers supported by a large distributor inventory warehoused at Midtex.
- **Superior customer service** responsive to your needs.

- **A broad-based line** of high quality products, priced competitively from a reputable, reliable source—Midtex!
- **Cross referencing** for fast, exact matching of your relay specifications to a Midtex relay.
- **Applications assistance**—44 years of Midtex experience in the design and manufacture of relays is available to you.

If you're tired of hearing: "Sorry, it's on back-order," contact a Midtex distributor, and give him your challenge. He'll be waiting.

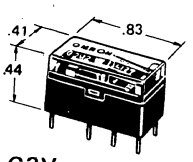
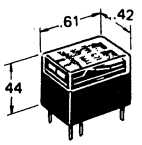
MIDLAND ROSS

OMRON®

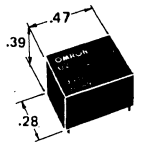
LOW SIGNAL RELAYS



G2V (inch)



G2E (inch)



G2Q (inch)

The relay products outlined on these pages are representative of hundreds of relays manufactured and distributed by Omron. Omron also manufactures a wide variety of other control components including: switches, photoelectric sensors, proximity sensors, timers, counters, temperature controllers and programmable controllers.

G2V

Ultra Small, Highly Reliable Dual In-Line Relay

- Same pitch as 16-pin DIP IC
- High contact reliability with bifurcated crossbar contacts
- Wide switching capacity from 100μA to 2A loads
- Permits .61" pitch PC board rack mounting
- Sealed type available
- High dielectric strength type is available to meet FCC 1500V surge requirement

■ **AVAILABLE TYPES**

Contact form \ Type	Unsealed		Sealed	
	Bifurcated crossbar	Single crossbar	Bifurcated crossbar	Single crossbar
DPDT	G2V-2-US	G2V-282P-US	G2V-234P-US	G2V-284P-US

• **CONTACT RATINGS**

G2R G2U G4D

G2R

Slim Styled Power Relay Breaks Up to 10A Loads

- Miniature, slim style design
- Ideal for space saving on PCB
- Creepage distance of more than .31" (between coil and contact)
- Switching capability of up to 10A loads (SPDT type) and 5A loads (DPDT type).
- VDE, SEV, UL, CSA and TV3 approvals pending.

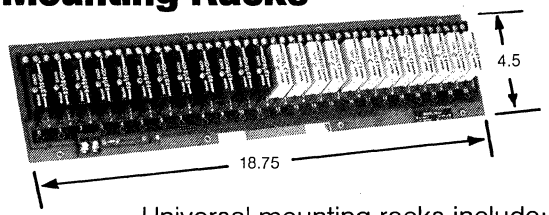
Opto 22. Solid state of the art.

Power I/O Systems

The most versatile I/O system available – also the most complete; Choices of 4, 8, 16, 24 or 32 module mounting racks; three logic voltages; 120 VAC, 240 VAC, 60 VDC, or 200 VDC load voltages; allow maximum flexibility in system design. The first true plug-in system per NEMA ICS2-230.02 simplifies maintenance, installation and modification. Provides power interface & optical isolation between the μP (or other logic) & industrial power.

Mounting Racks



Universal mounting racks include:

- ☐ LED status indicator
- ☐ Plug connection for logic signals (4 module board has barrier strip)
- ☐ UL Recognition, CSA Certified

Instant Delivery From Stock

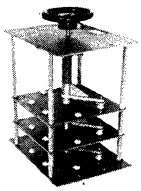
SAFETY AND ACCESSORIES

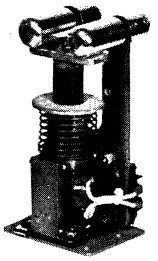


HV ROTARY SWITCHES

Ratings from 5 to 150KV, 1 to 200 amps. Either manual or electrical operators, depending upon requirements. Position detents and interlocks to prevent opening under load.

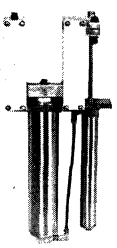
HIGH CURRENT SWITCHES

Models are available up to 20,000 amps continuous, and over 500,000 amps pulse, with voltage ratings of 6 volts to 300 KV peak test. Many are air cylinder or motor operated for high contact force.



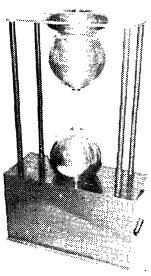
HV RELAYS

HV relays of the air insulated type both for low and high current. This series has ratings from 1 to 200 amps continuous, 100 to 100,000 amps momentary and capacitor discharge. Peak test voltages from 5 to 300KV. Single or Multipole. NO, NC, and DT. Auxiliary contacts optional on all types. Extended life and tungsten contacts also available for high current closing. Usable in oil.



HV-RF SWITCHES

For RF applications, low loss G-7 Silicone glass insulation and non-magnetic materials are used. Switches available up to 50 MHz. 1 to 50 KV, 1 to 800 amps. Air or hydraulic, and spring actuated.

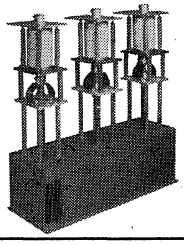


HV GROUNDING RELAYS

Extra high voltage low corona grounding relays of the air insulated type. Ratings up to 600 KV peak at 100 amps continuous. Solenoid, motor or air cylinder operated and spring or gravity return.

HIGH SPEED VACUUM CONTACTORS CIRCUIT BREAKERS

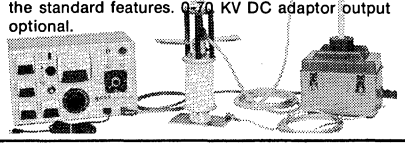
(One Cycle)



Vacuum switches, single phase, three phase, upright or low profile, for high reliability sealed arc interrupting or crobar shorting. 208V to 200 KV RMS operate. 50 to 4,000 amps continuous, 2,000 to 35,000 amps AC, 10 to 20,000 amps DC interrupt, 5,000 to 100,000 amps momentary and capacitor discharge.

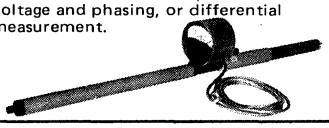
Hi-Pot TEST SETS
0-50 KV RMS, 0-50 KV DC

Specifically designed for testing HV Vacuum Devices as well as HV equipment and insulation. A built-in X-Radiation Monitor, Audible and Visible Breakdown Indicator, Breakdown Counter, and a 0-50 KV RMS Voltage Adjustment with large scale meter are among the standard features. 0-70 KV DC adaptor output optional.

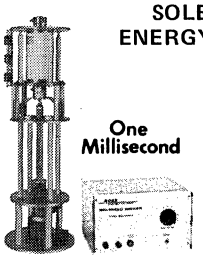


Hi-Z T.M. HV VOLTMETERS
SAFE POWER LINE USE AC - DC

Fully safe portable, all solid state, 2% to 5% accuracy. Taut band shielded high voltage measurement with minimum circuit loading. 0.0001 V to 50 KV AC and DC. Ideal for use with Elbow capacitance tap voltage test points. For cable test point or direct line voltage and phasing, or differential measurement.

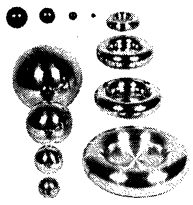


SOLENOID DRIVERS
ENERGY STORAGE UNITS



For high speed or loss of power automatic circuit breaker trip and for high speed activation of contactor or circuit breaker solenoids. Energy storage up to 400 joules or more at 150 to 700 volts or more, 100 to 4,000 microfarad or more. Instantaneous SCR control available.

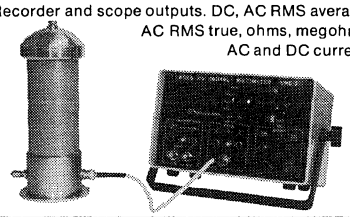
TOROIDS, SPHERES, CORONA SHIELDS



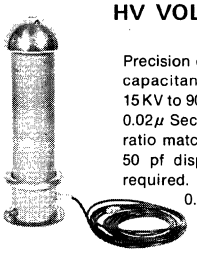
Geometrically designed to avoid excessive voltage gradients at connecting points and other areas needing shielding or balancing of electrostatic fields to increase withstand voltage and minimize corona. Diameters are to international standard metric sizes.

HV DIGITAL MULTIMETERS

Easy to read, 4½-digit display; 0.05% basic accuracy. 0.0001 volt to 900 KV. Battery/AC with charger. Recorder and scope outputs. DC, AC RMS average, AC RMS true, ohms, megohms, AC and DC current.

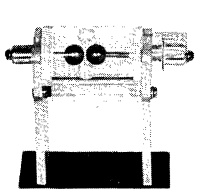


WIDE BAND HV VOLTAGE DIVIDERS



Precision compensated resistance-capacitance voltage dividers for 15KV to 900KV, DC to 10MHz or to 0.02μ Sec rise time pulse. 1,000/1 ratio matched to 1 megohm, 20 to 50 pf display or recorder, or as required. Accuracy and stability 0.1% to 3%.

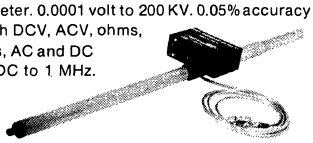
HV ADJUSTABLE SPARK GAPS



N'on-melting carbon spheres, 1 cm to 10 cm and heavy wall aluminum spheres, 10 cm and above. Dust tight transparent covers used 1 KV to 88 KV. Open style to 670 KV. Direct reading micrometer type calibrating device.

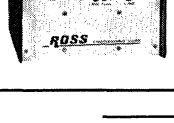
HV DIGITAL PROBES

HV DC, AC, & Wideband DC-1 MHz Safety Probes for any digital display or VTVM. Also available complete with large 4½-digit display 0.1% to 5% AC/DC accuracy, safety handle digital voltmeter. Battery/AC with charger. Removable Digital Display or Multimeter. 0.0001 volt to 200 KV. 0.05% accuracy basic, with DCV, ACV, ohms, megohms, AC and DC current. DC to 1 MHz.



WIDE BAND MATCHING AMPLIFIERS

NEW! Fiber Optics Transmission



AC or rechargable battery/AC operated. DC to 1 MHz. 1 megohm or higher input to 50 ohm load. Cable driver has a maximum output to 10V PK (20V PK to PK) and maximum input of 10V to 1,000V PK direct from signal source. With Ross wide band HV dividers useful from 0.1V to over 900KV.

New STANDEX HI-REL

Precedent Setting Proprietary Process* Achieves New Long Life Standards for Reed Switches

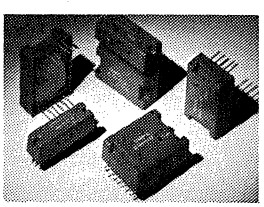
*Patent Pending

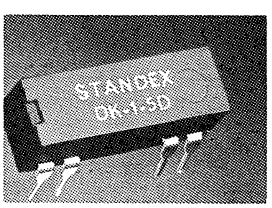
Now another major advance for Standex Electronics, the country's fastest growing manufacturer of reed switches and relays. A new reed switch has been developed for the High-Rel and ATE Reed Market. This switch features Stable Contact Resistance over life, with low dynamic noise and virtually no contact bounce. **The problem-solving switch the Automatic Test Equipment industry has been waiting for—a premium product at competitive prices.**

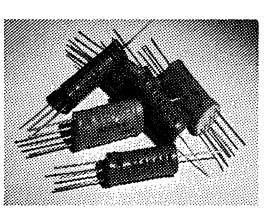
A new Standex proprietary process sets this model apart from other switches. And since we are a leading manufacturer of reed relays, we are prepared to package it for any user to specification.

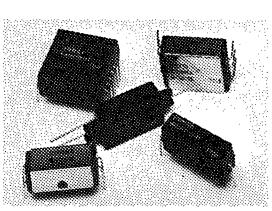
As with the complete Standex line, the new hi-rel switch features exceedingly robust glass-to-wire seals to minimize cracking or breaking at assembly, molding or testing stages of the user's product. Patented fully automatic production, testing, grading and sorting to your specifications ensure consistent performance and long life.

ATE manufacturers—call or write us for further information and test results from an independent testing laboratory. Let Standex start helping with your switching problems today.









Standex Electronics

4538 Camberwell Road, Cincinnati, OH • (513) 871-3777 Morley Road, Tonbridge, Kent, England • (732) 358398

Manufacturers of Paul Smith Coils and Chokes, Underwood Mica Capacitors and Van Products Connectors. Multiple plants in U.S. and Mexico. Other plants in England and Haiti.

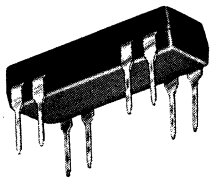
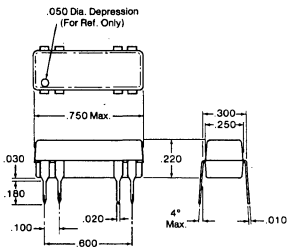
WABASH RELAY & ELECTRONICS DIVISION The Reed Relay Specialist

DIP PACKAGE DRY REED RELAYS
814 SERIES





The 814 Series offers dry reed reliability and total isolation in a low profile IC type package, with DTL/TTL compatible coil drive available in most configurations.

SPECIFICATIONS — Contact Rating: 28 VDC or 0.110 Amps (switching); 3 watts; 200 milliohms max. initial contact resistance; 200 Volt pk. bkdn. **Temperature:** −55°C to +105°C. **Shock:** 100G max., 8 ±1 mSec. ½ wave. **Vibration:** 20G @ 10-5000 Hz. **Insulation Resistance:** 10^{10} Ohms min. **Capacitance:** 0.2 pf. **Operate Time (Typical):** to 0.5 mSec. **Release Time (Typical):** 0.1 mSec. **Life Expectancy:** 50 x 10^6 operations at signal level; 1 x 10^6 operations at rated load.

Contact Form	Nom. Voltage	Max. Voltage	Coil Resist. ±10%▲	Part Number
1A	5/6	16	365	814-101-01
	5	19	500	814-102-01
	6	19	500	814-103-01

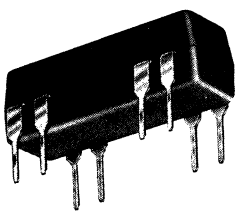
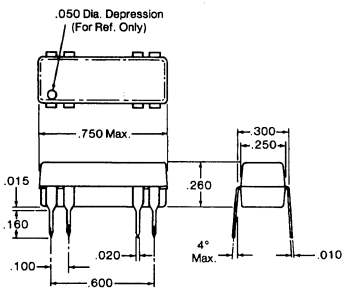
	24	30	1250	814-105-01

▲ Measured at 25°C.

815 SERIES





The 815 Series, with a profile slightly higher than the 814, offers increased versatility while maintaining the DIP package approach to hi-density printed circuit applications. Standard part numbers listed are subject to specifications shown for the 814 Series, however, the 815 has the capacity to offer dry reed switches to ½ Amp rating plus up to a 200 VDC max. switching voltage. Optional features include diode suppression, magnetic shielding and electrostatic shielding.

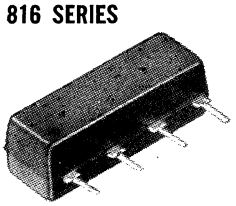
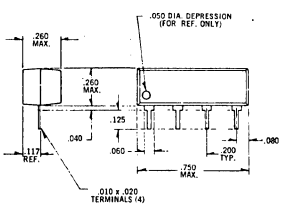
	12/15	19	500	815-242-01
	24	38	2000	815-243-01

816 SERIES





The 816 Series SIP (Single-Inline Package) provides the power handling capabilities of the 815 DIP while taking up less printed circuit board space. Standard part numbers listed are subject to specifications shown for the 814 Series; however, the 816 has the capacity to offer dry reed switches with ratings to 0.5 amps and 200 VDC. Optional features include diode suppression and magnetic shielding.

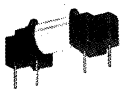
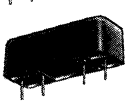
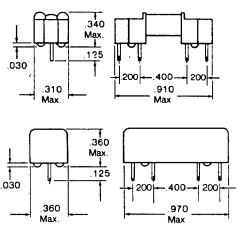
802/803 SERIES







The 802 and 803 are sub-miniature reed relays in a Single-Inline package. They are both available in a 1 Form A configuration and are P.C. mountable. Contact ratings of 200 volts DC with total power handling of 10 watts is standard.

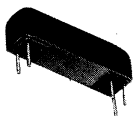
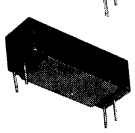
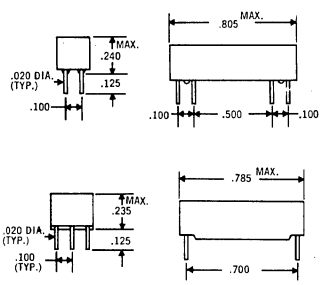
SUB-MINIATURE RR
804/806 SERIES







The 804 and 806 sub-miniature reed relays come in a 1 Form A configuration. Both relays are P.C. mountable and are completely enclosed for environmental protection, extended life and easy cleaning. Call Wabash Relay & Electronics for complete details.

SPECIFICATIONS — Contact Ratings: (max.) 200 VDC, 0.5 Amp (switching), 1.0 Amp (carry), 10 Watts DC, 15 V-A (AC suppressed), 250 Volts peak breakdown, 200 milliohms max. initial contact resistance. **Temperature:** −55°C to +105°C. **Shock:** 30 G max., 11 ±1 mSec. **Vibration:** 10 G max. @ 0 to 1700 Hz. **Insulation Resistance:** 10^{10} ohms min. **Capacitance:** 0.5 pf. **Life Expectancy:** 100 x 10^6 operations at dry ckt.; 50 x 10^6 operations at signal levels; 20 x 10^6 operations at rated load.

The relays shown here are just a sampling of the many designs and configurations manufactured by Wabash Relay & Electronics as standard products. We also offer design assistance and custom designed relays through our fully staffed engineering department. Should you require a custom designed relay, here are some parameters to consider:

U.L. and C.S.A. Recognition

Several relay series are recognized under the Component Program of Underwriters' Laboratories. Most of these relays also have C.S.A. recognition. Regardless of which series you are interested in, Wabash Relay can help you obtain the U.L. or C.S.A. recognition your design requires.

Wabash Relay & Electronics Division
1st & Weber Streets, Wabash, Indiana 46992
(219) 563-2191 TWX: 810-290-2722

Prints and specifications, if available, are the best design tool. The minimum information required for Wabash Relay to design a relay is:

Mechanical Specifications

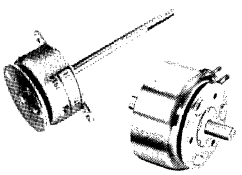
- Maximum length
- Maximum width
- Maximum height above P.C. board
- Pin configuration
- Open or covered
- Type of environment relay will be exposed to
- End Use

Electrical Specifications

- Switch configuration
- Nominal voltage
- Must operate voltage or current
- Must release voltage or current
- Coil resistance
- Switching current
- Contact resistance
- Carry current
- U.L. recognition required
- Special considerations (ESS, low thermal, high insulation resistance, etc.)

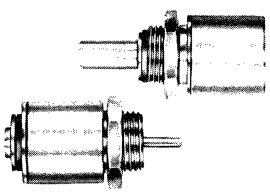
LEDEX® Solenoids

Over 300 choices of standard solenoid designs are available off-the-shelf from Ledex. But, if none of these meet your unique requirements, we'll provide you with custom engineered prototypes. Either way, Ledex offers you the widest variety of solenoids for your design.

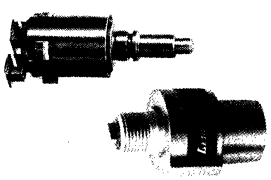


Rotary Solenoids
Step-turn-index-lock-punch-lift. For millisecond fast torque and endurance, specify a Ledex rotary solenoid.

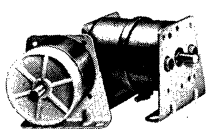
Eight basic sizes, right or lefthand strokes from 10 to 110 degrees. Torque output to 117 pound-inches. Life of over 100 million cycles with endurance engineered models.



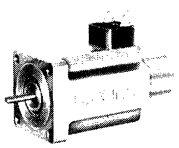
Linear Solenoids
Short-medium-long strokes are all available from one source—Ledex. Choose our low profile flat face push/pull for high force/short stroke; our low profile conical face push/pull for medium force/stroke and our tubular solenoids for long strokes. Rugged construction provides accurate repeatability after long usage. Our tubular solenoids have built-in impact cushions to absorb energy at the end of the stroke and electroless nickel plated plungers for longer life.



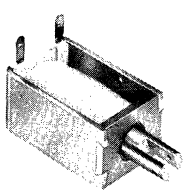
Custom Designed Solenoids
The Ledex Model 515 Dot Matrix solenoid has a special patented construction to control bounce, is easy to mount, uses standard terminals, operates at 1300 Hz., and has a life of 300 million actuations. Our printhammer solenoid was specially designed for quiet actuation to interface with plastic or metal daisy wheels while delivering variable force depending on the character.



Stepping Solenoids
Step 10-15-20 or 30 degrees with the highest torque a stepping solenoid makes – the Ledex Series 50-L. Square wave pulse drives either the unidirectional or bidirectional model for 10,000,000 steps with a non-accumulative accuracy of ±1°. Direct couple for mechanical ease and avoid linkages. Can be manually overridden in case of power failure.



Proportional Solenoids
Open loop/closed loop, variable position sensing is now possible by using the Ledex proportional solenoid with the Ledex controller for smooth, accurate response. Hydraulic systems can use our wet plunger type which requires no dynamic seals and provides up to 50 pounds force. Do away with pilot stages and expensive servo valves.



D-Frame Solenoids
Ledex D-Frame solenoids offer economical, long term service for users whose needs must be matched by a dependable product and reliable source. Eight standard models are available from stock with strokes up to 1.25". Quick connect terminals and class "B" coils are standard.

SPECIALS

ELECTRO-MECHANISMS, INC., is completely equipped, both engineering and production wise, to supply you with variations of our solenoids that you might need for your application. We are also capable of designing special types that you might need within the size range of our products. We would appreciate the opportunity to help you solve design and application problems you may have in the area of miniature solenoid actuators.

The force charts below represent three different duty cycles.

Nominal voltage represents continuous duty.

2X Nominal voltage represents a 25%, intermittent duty cycle 4X Nominal voltage represents a 6% intermittent duty cycle.

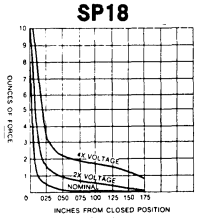
The duty cycle consists of two factors:

1. Percentage of time solenoid is energized in one complete operating cycle.

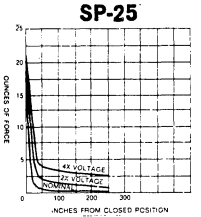
$$\text{(Ref: DUTY CYCLE} = \frac{\text{Time On}}{\text{Time On} + \text{Time Off}} \times 100\text{)}$$

2. Length of time of the longest single energization in one complete operating cycle.

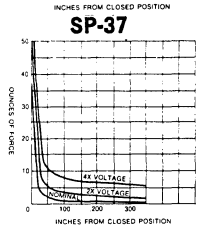
SP18



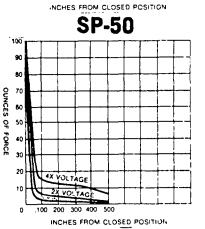
SP-25



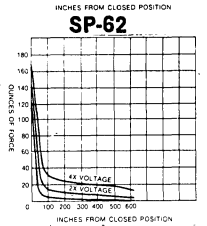
SP-37



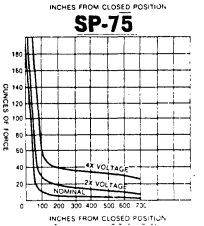
SP-50



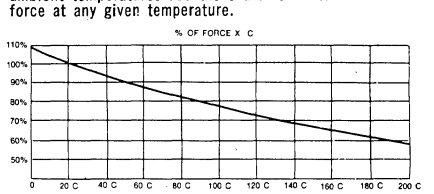
SP-62



SP-75



All forces shown are at 25° ambient. For use at higher ambient temperatures use the chart below to determine force at any given temperature.



FEATURES

ELECTRO-MECHANISMS micro-miniature solenoids offer you static and impact forces equal to standard solenoids 2 to 3 times the size of these units.

Because of their small size, they have extremely fast reaction time. As fast as 2 msec at 4x nominal voltage.

The unique design of PUSH or PULL action, offers many applications beyond the conventional pull type solenoid.

A complete line of 15 solenoids from 3/16″ O.D. to 1.250″ O.D. allows you to choose the correct solenoid with the force you require, from stock items.

The units are highly reliable with life of many millions of operations.

The solenoids are also available with coils in Class F and Class H for high temperature requirements.

Simplicity of design helps keep the costs down and allows us to pass these savings on to you, our customer.

TYPICAL APPLICATIONS

- Hammers for high speed printers
- Camera shutter actuators
- Locking mechanisms for switches, adding machines and typewriters
- Interposers for card punching and tape perforation
- Cam actuation
- Pen lifters for plotters
- Event markers for chart recorders
- Key actuators for numerical readouts on typewriters and adding machines
- For life testing different devices
- For indicator flags
- Sensing devices
- Remote switching and actuation

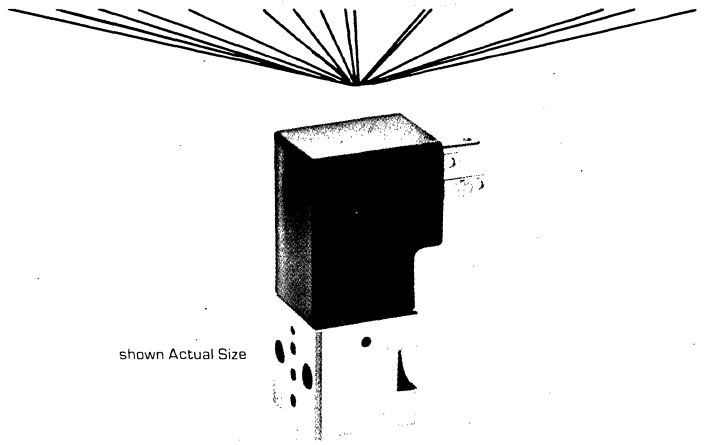
MINIATURE SOLENOID VALVE



The **MICROSOL** miniaturized Solenoid Valve is particularly suitable for engineering applications requiring a low electrical power consumption, minimum space and weight and high pressure/flow rate characteristics.

The **MICROSOL** Valve consists of a solenoid and a rigidly fastened valve body. The solenoid includes a Class 155 (F) coil and its magnetic core is encapsulated with synthetic material. The magnetic circuit includes a magnetic housing and a fixed or a mobile magnetic core. The mobile magnetic core (plunger) has a return spring which operates the main sealing disc located in the valve body of the **MICROSOL** Solenoid Valve. The low inertia of the moving parts of the **MICROSOL** Solenoid Valve assures long life at a high cycling rate.

Available in 2-way or 3-way Normally Closed or Normally Open modes with various functional combinations. Used with air, inert gas, and liquids media. Pressures from vacuum to 150 PSI. Available in AC and DC voltages. Consult Factory for more specific information and other available options.

- Low Heat Generation
- Compact
- All Ports in Body Design—lends itself to manifolding
- Low Power Consumption
- Fast Response
- Easy Mounting
- Multipoised—May be mounted to operate in all positions
- Lightweight
- Large Exhaust
- Long Cycle Life
- Printed Circuit Board Mountable

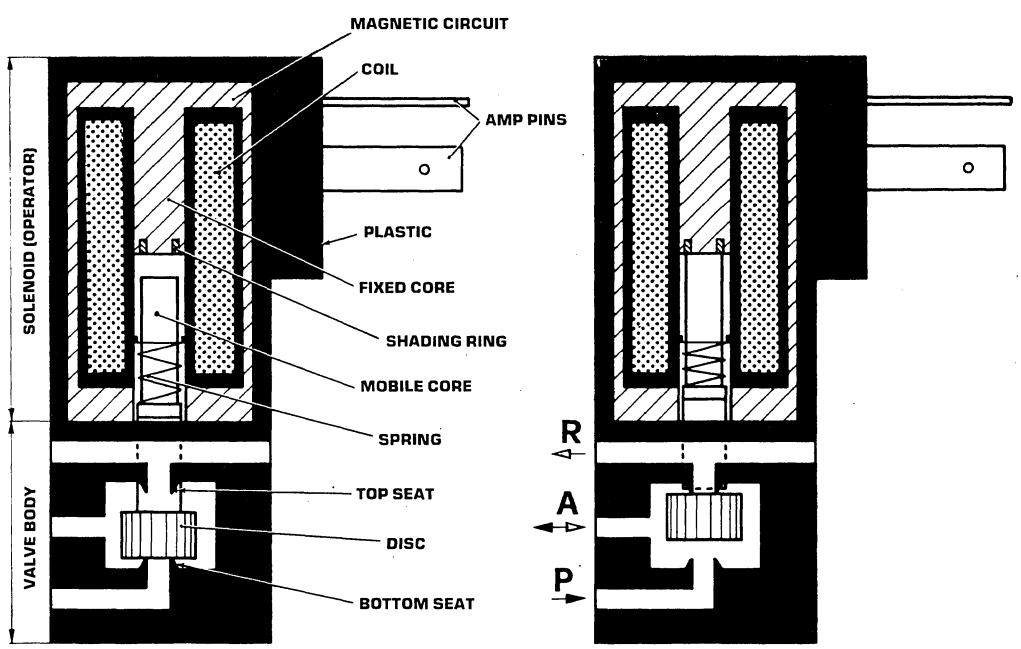
MICROSOL™ Solenoid Valve

Pilot Valve for 3-Way or 4-Way Valves
Dental Consoles—drill cooling, air blowers
Pick and Place Robots—direct actuation of small cylinders, suction pads
Control Cabinets of Complex Machines—condenser manufacturing, blister packaging, low melt packaging such as wax milk cartons
Keyboard Test Equipment—cylinder actuates keys
Adhesive Applicators
Textile Machines—especially knitting
Electronic Production Machinery—printed circuit board manufacturing
Low Pressure Hydraulic Controls—grinding machines, milling machine tables
Instrumentation—pneumatic panels
Household Automation—lighting, heating/cooling, irrigation
CO_2 Aquarium Supply
Animation—theme parks, window displays, trade-show exhibits
Ship Controls
Gas Mixing Equipment—Medical Instrumentation
Blood Pressure Machines
Actuation of Hydraulic Valves—machinery interlocks
EDM—electrode feed system
Powder Metallurgy—handling equipment
Microprocessor Controlled Systems
Mark Space Positioning (frequency shift modulation)



Terms and Conditions: All products of the company are sold and all services of the company are offered subject to the company's terms and conditions of sale, copies of which will be furnished upon request. GENERAL CONTROLS, 801 ALLEN AVE., GLENDALE, CALIF. 91201.

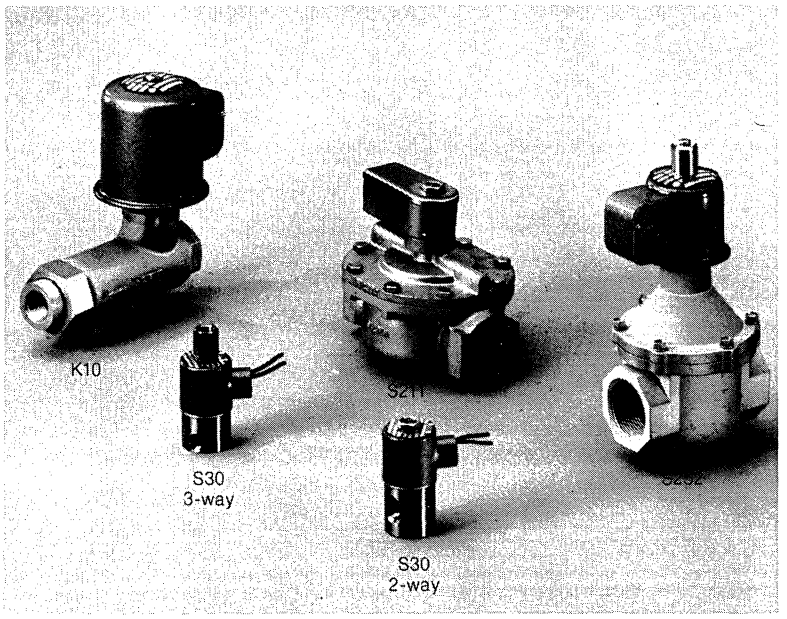
ITT GENERAL CONTROLS DIVISION

Solenoid Valves

A Better Valve at a Competitive Price



If you think all solenoid valves are the same, take a close look at ITT General Controls. Our solenoid valves offer you a combination of exclusive features you won't find anywhere else. Built better to last longer no matter what your application my require, our Solenoid Valves perform around the clock to give you the kind of operational security you have come to expect from ITT General Controls.

Engineered with Vision

ITT General Controls Solenoid Valves have been designed to bring you tomorrow's technology today, with 5 important features that set us apart from every other solenoid valve on the market:

- Superior coils — ITT General Controls has standardized on the highest quality UL listed, Class F, epoxy-molded coils for factory stocked catalog items. Class H coils also are available.
- Floating Main Seal — Our unique seal design assures tight shut-off every time by allowing the seal to position itself on the orifice and self-adjust for wear.
- Compensating Top Seal — All of our 3-way, direct acting solenoid valves feature a compensating top seal which can withstand wider temperature variations and is self-adjusting for extended cycle life.
- Simple Service — All ITT General Controls Solenoid Valves are engineered for easy installation and servicing. For example, our 2-way normally open S302 Valve features both pipe connections in the body. This important design benefit allows coil replacement without disconnecting any fluid lines, unlike other 2-way normally open solenoid valves which require shut down for coil change.

Built with Care

ITT General Controls Solenoid Valves are manufactured to the industry's most exacting quality standards — ours! For instance, our break-through holes are drilled by EDM — electrodata machining. This is a non-contact machining process that virtually eliminates metallic burrs which can contaminate flow passages, damage the valve, or even jam the piston. Longer life and protection against corrosion are assured by a chemical passification process which removes the smallest trace of residue. The result is a tougher and longer working trouble-free solenoid valve.

More Features at a Competitive Price

Our solenoid valves give you all of these exclusive standard features not always available in other solenoid valves. Plus, you can choose between low cost 2-way or 3-way valves in normally open, normally closed, universal, or directional flow configurations. There are also extensive choices for flow rates, media, pipe sizes, and valve body materials, as well as custom designs for your specific needs.

So before you specify solenoid valves, look closely — they're not all the same. For the best solenoid valve, the best price, the best service, and the best delivery, call ITT General Controls. Get the only solenoid valves that are... **Engineered with Vision — Built with Care.**

DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

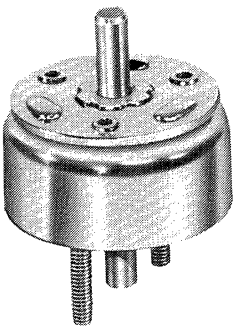
Y

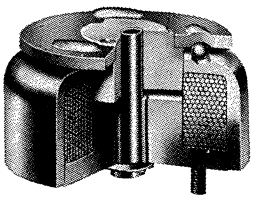
YIG yttrium iron garnet

LEDEX ROTARY SOLENOIDS

Ledex Rotary Solenoids step, turn, pull, push, index, hammer, punch or trigger—whenever there is a need for fast and dependable direct rotary action. No complicated linkages or circuitry required. They're simple, have superior shock and vibration resistance, high torque over the full stroke. 250 standard models in stock for prototype work, ship in 48 hours. 117 to .09 lb.-in. torque range. Right or left hand strokes available in a variety of degrees.

Write for our complete catalog.





Gross Torque in Pound-Inches by duty cycle for standard rotary strokes

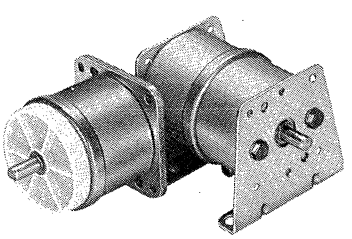
CUSTOM DESIGNS

Design application assistance, and custom design rotary solenoids are always available from Ledex.

A few examples include:

Special shaft extensions
Special shaft configurations
Subminiature rotary solenoids
Special armature plate contours
Special finishes
Special mountings
Special rotary strokes
Zero axial stroke models
Two coil solenoids

STEPPING SOLENOIDS—SERIES 50



Extended life stepping solenoids have a 10 million cycle minimum life on unidirectional models, and in each direction on bidirectional models. 12, 18, 24, and 36 position designs, accurate to ±1° nonaccumulative. High torque-to-size ratios, with breakaway torques to 246 ounce-inches. The exclusive tooth clutch drive yields greater usable torque output, and acts as a built-in electromechanical clutch brake for inertia loads. 64 stock models for quick prototype development.

Write for our complete catalog.

Summary Specifications	Unidirectional	Bidirectional
Voltage	6 to 220 VDC	6 to 220 VDC
High temperature	+85°C	+85°C
Low temperature	−40°C	−40°C
Length	1.9"	2.8"
Height	2¼" (sq. plate)	2¼"
Weight	14 oz.	24 oz.

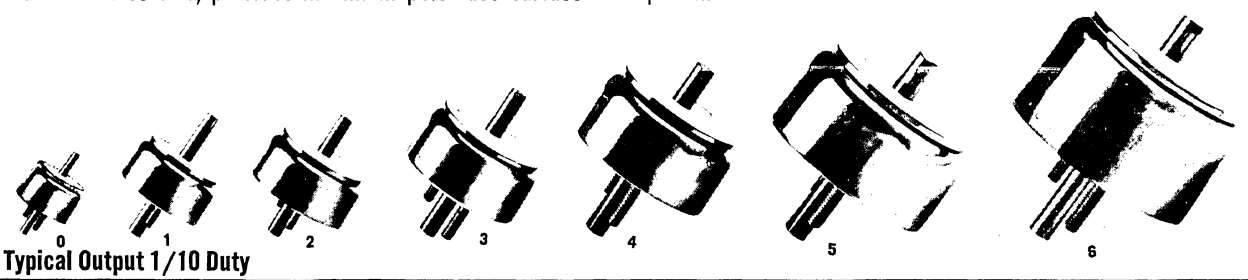
PUSH & PULL SOLENOIDS

You name the job.
Short, medium or long stroke. High speed.
Tight space. Unusual load. Ledex has the solenoid for you, usually on the shelf. Expert design assistance for your toughest custom requirements.

Low-profile Ledex push/pull solenoids are built for high force to size and fast response. Better than 10ms response. Form factor minimizes size, provides maximum pole face surface for best efficiency. Two types available. Flat face is for short stroke, rapid response. Conical face gives more mid-range punch.



Typical Output 1/10 Duty

Model	0	1		2		3		4		5		6		7	8

(For detail performance curves, write for our Catalog)

Quality engineered for efficiency and long term dependability, the Ledex long stroke solenoid has a built-in impact cushion pad to absorb energy at the end of the power stroke. For smooth travel and long wear, the solenoid plunger is electroless nickel plated. It rides in a smooth bushing track designed for positive alignment and low friction. Off-the-shelf models available for 12, 28 and 100 VDC operations.

When it comes to actuating, Ledex has both the people and products to give you the quickest and best solution. There's a wide choice of stock models for a fast start on your prototype. And our expert application staff is always glad to custom engineer to your exact stroke, force, speed and size requirements. Other models (not shown) are available on made-to-order basis with force outputs in excess of 350 pounds. Write for our catalog.

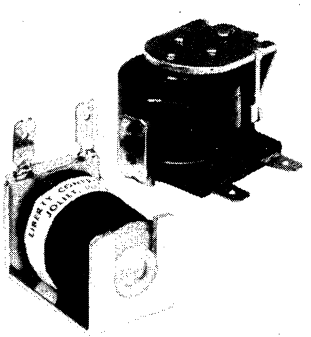
CLICKERS AND CLAPPERS

Now Liberty Controls offers a line of clickers and clappers. Especially designed for use on today's solid state keyboards, and disc drives.

Send or call for catalog:
500 Brookforest Ave.,
Shorewood, IL 60435
(815) 725-2241



In addition to our standard product line Liberty Controls can modify an existing unit or design one to meet your specific requirements. For further information on possible modifications contact the factory.

EEM PRODUCT SELECTION GUIDES

Use the EEM Product Selection Guides.
There are 33 Guides in this edition of EEM.
See page 2 (1•2, 2•2, 3•2) of each volume
to locate the Product Selection Guides
that pertain to your needs.

WONDERFILE!

All-new in '82! The EEM File System has been completely revised and updated. It's now easier than ever to control your files of manufacturers' catalogs.

The new EEM File System contains a complete Product Index. This Index tells you where to file which catalog. It also contains a cross-reference so you'll know where catalogs are filed.

In order to use the new EEM File System all you need is a supply of standard letter size, third-cut, manila file folders which are available locally. You then use the pressure-sensitive labels which are supplied with the File System to go into as much detail as you want (or need).

Each label fits the third-cut file folder exactly. There are 308 of these labels in one System: 1 for the Index, 1 each for the 61 EEM Product Sections, 24 for the alphabetical file of multiproduct catalogs, plus 222 additional labels for System expansion.

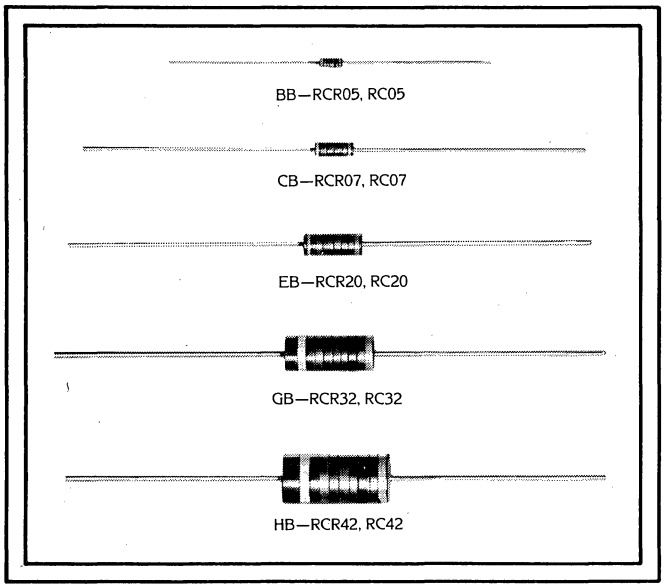
The System also includes 61 Cross Reference Cards so you can quickly and easily find multi-product catalogs.

The EEM File System is complete and can save you countless hours of time and thousands of dollars.

The price? Only $25.00. Send a check to: EEM File System, 645 Stewart Ave., Garden City, NY 11530 and we'll absorb postage and handling. Send a purchase order and add $2.00 for postage and handling. NY and CA residents, please add sales tax.

Use the card at the end of the Product Index in this EEM. Card missing? Write directly to EEM File System.

Types BB, CB, EB, GB, HB, GM, HM Hot-Molded Fixed Resistors



Allen-Bradley hot-molded composition resistors are high quality units intended for general purpose use in the electronics industry.

Allen-Bradley Style RCR resistors not only meet all requirements of MIL-R-39008 but also exceed the S level (best level) of Established Reliability of 0.001% failure rate per 1000 hours. And only Allen-Bradley resistors are available in S level reliability in all five wattage sizes over the entire resistance range. The S reliability level is indicated by a yellow 5th color band on the resistor body.

Metal-clad hot-molded resistors (Types GM and HM) are fitted with metal clamps which surround the major portion of the resistor. The metal clamps provide rigid mounting and efficient heat transfer from the resistors to the metal chassis or panels on which they are mounted.

For more information request Publication EC5021-2.1.

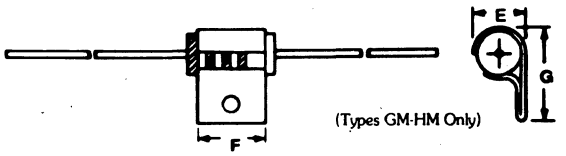
(Types BB-CB-EB-GB-HB)



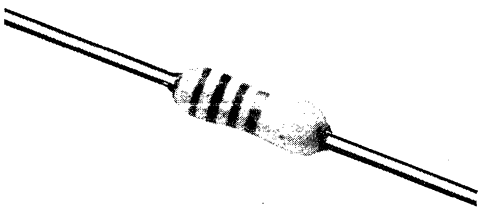
(Types GM-HM Only)

ALLEN-BRADLEY

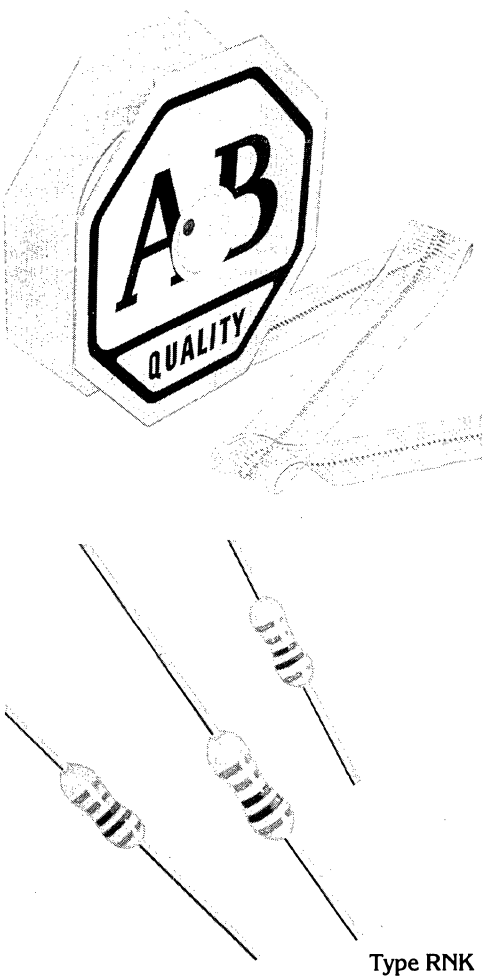
Milwaukee, Wisconsin 53204

Types RN, RNK

Metal Film Fixed Resistors



Type RN



Type RNK

1/4 Watt at 70° C
10 Ohms to 1 Megohm
±1% Tolerance, ±5% Tolerance
±100 PPM/° C, ±200 PPM/° C

FEATURES

- Highly Stable Metal Film
- Tight TCR
- Laser Trimmed Element
- High Quality Performance
- Standard Tape Reel Packaging
- Automatically Insertable

Allen-Bradley metal film resistors are high quality units intended for general purpose use in the electronics industry.

Nichrome resistance element provides stable performance under load, in various environments, and on the shelf. Type RN performance characteristics are better than MIL-R-22684 (RL07) requirements. Type RNK performance characteristics are better than MIL-R-10509 (RN55D) requirements.

For more information request Publication EC5030-2.1 (Type RN) or Publication EC5032-2.1 (Type RNK).

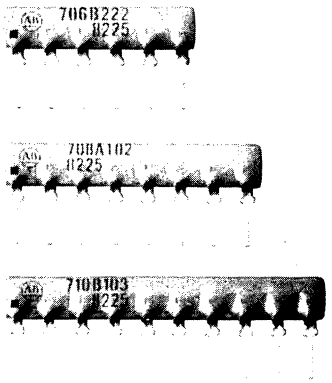
- Transmission line terminators
- Current limiting resistors
- ECL terminating networks
- A wide array of custom designs

ALLEN-BRADLEY

Milwaukee, Wisconsin 53204



C-SIP
Single In-Line Package

Series 700 Conformal Coated Cermet Resistor Networks

FEATURES

- 96% Alumina Substrate
- Permanently Laser Marked
- Part Markings — Side and Top
- 0.100 Inch (2,54mm) Lead Spacing
- Low Package Height
  0.190 Inch (4,8mm)
- 6, 8 and 10 Pins
- Durable Conformal Coating
- Standard Circuits
- High Quality

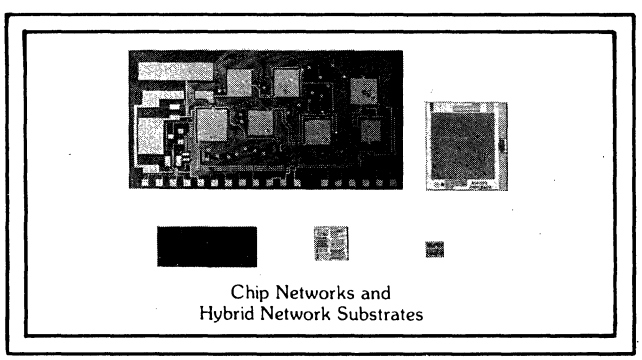
- 1K Ohms to 10 Megohms
- ± 0.015% Tolerance
- ± 0.015% Ratio
- ± 25 ppm/°C TCR
- ± 5 ppm/°C TCR Tracking
- SIP Package (ceramic)
- DIP Packages (molded and ceramic)
- Chip Resistor Networks (alumina or glass)
- Hybrid Network Substrates (alumina or glass)

For more information request Publication EC5510-2.1.

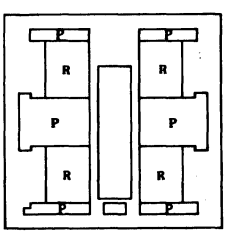
Applications

These precision networks are ideally suited for use on any electronic equipment requiring close tolerances and/or low temperature coefficient resistors. Some of these applications are listed below.

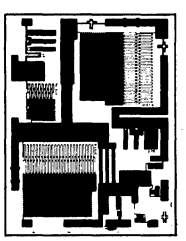
— Ladder networks
— Digital multimeters
— Current summing applications
— Precision attenuators
— A/D and D/A converters
— Communication equipment
— Precision voltage dividers
— Telemetry equipment
— Coding and decoding circuitry
— Measurement bridges
— Paging systems



Chip Networks and
Hybrid Network Substrates



Chip Network



Hybrid Network Substrate

Hybrid network substrates — Allen-Bradley hybrid network substrates contain resistors, bonding pads and interconnections used in producing hybrid networks. Allen-Bradley does not manufacture complete hybrid circuits, but does manufacture the basic hybrid network substrates.

Termination and bonding pad material — Gold, with a minimum thickness of 5000A, is used for all termination pads, bonding pads and interconnections. This material is compatible with ultrasonic and thermocompression bonding methods for attaching gold or aluminum wire, integrated circuit dice, LID's or beam leaded IC's. Chip capacitors can be attached by reflow solder methods.

Substrate material — Glass: Corning 7059 glass (Barium Alumino Silicate - electrically inert [Alkali-free]) .032 ± .005 inch (0,81 ± 0,13mm) thick. Ceramic: 99.5% Alumina, .010 ± .001 inch (2,54 ± 0,3mm) thick.

User trimmable option — Chip and hybrid network resistors can be trimmed to tolerance by Allen-Bradley or, if needed, resistors can be

designed for active trimming by the user during final hybrid assembly operations to meet predetermined functional requirements. The amount of adjustment available is dependent on the initial resistance value, resolution, final value and available substrate area. The active trimming results in a positive resistance change only and can be done by mechanical methods or a laser. These networks are referred to as user trimmable resistor networks.

Standard substrate sizes (in inches) —

.150 x .150	.350 x .150	.200 x .200	.600 x .200
.250 x .150	.450 x .150	.400 x .200	.250 x .250

Bonding pad sizes — 5 mils x 5 mils minimum.

Resistance range — 1K ohms to 10 megohms.

Tolerances — Absolute: as low as ± 0.015% at + 25°C. Ratio: as low as ± 0.015% at + 25°C.

TCR — ± 25 ppm/°C
TCRT — ± 5 ppm/°C

Temperature ranges of operation — −55°C to +125°C or 0°C to +70°C. Other ranges available.

Power rating — Up to 50mw per resistor.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

High Performance Film Resistors

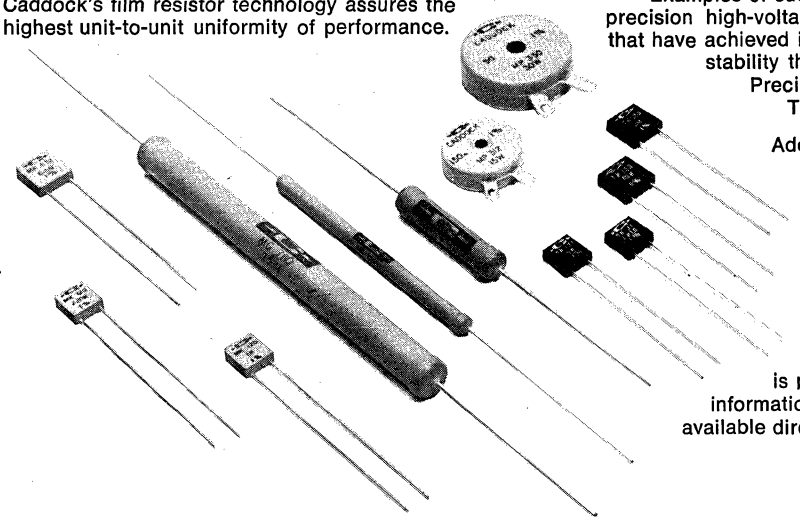
This 20th Edition of the Caddock Electronics General Catalog describes over 150 in-production models of precision discrete resistors and resistors networks that utilize Caddock's high-stability, extended-life Micronox® and Tetrinox™ resistance films. With 20 years of experience and an exceptional record of in-circuit performance and reliability, Caddock Electronics continues to lead the industry in the development, production and on-time delivery of high performance film resistors.

Caddock's Advanced Resistor Technology Provides Many Exceptional Performance Advantages:

Caddock's advanced resistor technology began in 1962 with the introduction of Micronox® harsh-environment high-power and high-voltage resistors. The Caddock technology was further extended in 1975 with the development of the Tetrinox™ resistance system that made possible the introduction of low TC, ultra-stable resistors and resistor networks.

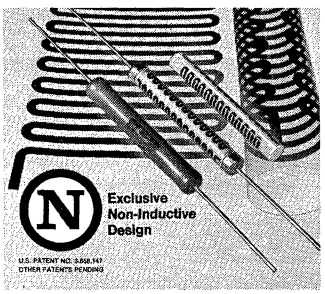
These technological advances have provided the electronics industry with a selection of precision resistor types that achieve many high-performance advantages:

- **Precision** — Tolerances as close as 0.01%.
- **Long-Term Stability** — Better than 0.005% per 1000 hours of operation under full load operating conditions.
- **Higher Power Ratings** — Up to five times higher than other resistor technologies.
- **High Operating Temperatures** — Up to +275°C.
- **Ultra-Low Temperature Coefficients** — Standard to less than 10 PPM/°C and custom values as low as 2 PPM/°C.
- **Unit-to-Unit Uniformity** — The inherent consistency of Caddock's film resistor technology assures the highest unit-to-unit uniformity of performance.



Caddock's Exclusive Non-Inductive Performance Is Available in Both High-Power and High-Voltage Micronox® Film Resistors.

For wide-band, high frequency applications, the advantages of Caddock's Exclusive Non-Inductive Design are available in most models of Micronox® resistors. This special serpentine pattern provides for neighboring lines to carry currents in opposite directions, thereby achieving maximum cancellation of flux fields over the entire length of the resistor.



The result is a truly non-inductive resistor that is about as inductive as a straight piece of wire the length of the resistor body. This efficient design means faster settling times and minimum distortion in all types of high frequency circuits.

The High-Performance Capabilities of Caddock Film Resistors Can Provide Improved Accuracy and Stability to Precision Circuitry:

Because of the special advantages of Caddock's resistance film technology, Caddock High Performance Film Resistors are often specified in the precision circuits that ultimately establish the overall accuracy and stability of the equipment.

Examples of such applications include many types of precision high-voltage supplies and voltage references that have achieved improved accuracy and extended-life stability through the use of Caddock Type MG Precision High-Voltage Resistors and Type T912 Precision Resistor Networks.

Additional examples of the application of this advanced resistor technology include the industry-wide use of Caddock Type 1776 and Type 1787 Precision Decade Divider Resistors in the signal input circuits of laboratory and bench-type digital voltage and current measuring instruments.

An introduction and index to these Caddock resistor technologies is provided on the next page. Additional information and technical assistance is also available directly from our technical staff.

We welcome your call.

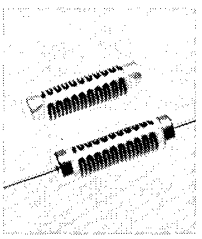
High Performance Film Resistors

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Micronox® Resistance Films

For harsh environmental conditions, Caddock Micronox® resistors are truly unsurpassed. Produced by firing complex-oxide Micronox® resistance films onto ceramic core materials at temperatures above +1400°F, these precision resistors can withstand extremes of temperature, thermal shock, overvoltage and input power.



The result is a family of high voltage, high power precision resistors with an exceptional combination of performance advantages:

- **High Power Ratings** — to 30 watts.
- **High Voltage Ratings** — to 30,000 volts.
- **High Stability** — as close as 0.01% per 1000 hours in 50,000 hour extended life.
- **High Operating Temperatures** — up to +275°C.
- **A Wide Range of Resistance Values In Many Sizes** — from 30 ohms to 2000 Megohms.

These performance advantages make Caddock Micronox® film resistors ideal for use in many types of electronic circuitry, including —

- **Voltage Reference Circuits**
- **High Power Density Packaging**
- **Precision Feedback Circuits**
- **Matched TC Resistor Pairs**

Type MG Precision High-Voltage Resistors
Highest stability at continuous operation to 30,000 volts in single-resistor values as high as 2000 Megohms.

Pages 1•1920 and 1•1921

Type MS and MR Power Film Resistors
Power ratings to 15 watts at 6000 volts in a single axial-lead resistor - plus, Non-Inductive Performance is available.

Pages 1•1922 and 1•1923

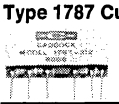
Type ML and MM Precision Film Resistors
Molded case encapsulation to meet high temperature industrial and aerospace requirements.

Page 1•1924

Type MP Chassis Mounted Power Film Resistors
High power density in both 15 and 30 watt ratings with center-screw chassis mounting.
Page 1•1925

Type MK Low Cost Precision Film Resistors

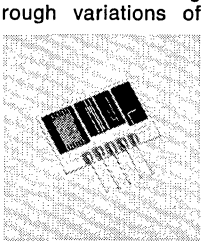
.75 watt rating at +125° C. Resistance range from 30 ohms to 100 Megohms.
Pages 1•1926 and 1•1927

Type 1787 Current Shunt Resistor Networks


2-, 3- and 4-decade input networks for accurate current sensing in multi-range instrumentation.
Pages 1•1928 and 1•1929

Tetrinox™ Resistance Films

In high-accuracy instrumentation where outstanding circuit performance is required through variations of temperature and through long-term operation, Caddock Tetrinox™ resistance films are the answer.



Constructed with advanced technology complex-oxide resistance films that are fired onto ceramic substrates, Caddock Tetrinox™ film resistors provide a unique combination of performance characteristics:

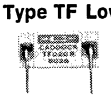
- **Ultra-Low Absolute and Ratio TC** — standard to less than 5 PPM/°C.
- **Ultra-Precision** — tolerances as tight as 0.01%.
- **High Resistance Range** — values to 10 Megohms in a miniature package.
- **Ultra-Stable in Loadlife** — ratio stability to within ±0.01% per 2000 hours.

This special combination of advantages make Caddock Tetrinox™ film resistors the optimum choice in many high stability applications, including —

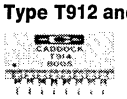
- **Input Voltage Dividers in Precision Laboratory Instrumentation**
- **Precision Bridge Circuits**
- **Precision Voltage Reference Circuits.**
- **Ultra-Stable Voltage Dividers.**
- **Ultra-Low Power Precision Circuitry.**
- **Decade Resistance Networks.**

Type 1776 Precision Decade Resistor Voltage Dividers

33 models of decade voltage dividers for accurate voltage-division in multi-range digital instrumentation.
Pages 1•1930 and 1•1931

Type TF Low TC Ultra-Precision Film Resistors


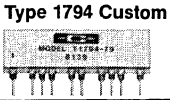
The cost-effective replacement for precision high-value wire-wound resistors.
Page 1•1932

Type T912 and T914 Precision Resistor Networks


Resistor pairs and quads with ultra-precision ratio characteristics for analog circuits.
Page 1•1933

Type TK Temp-Stable Precision Film Resistors.

Temperature coefficients to less than 5 PPM/° C in single resistor values as high as 10 Megohms.
Pages 1•1934 and 1•1935

Type 1794 Custom Precision SIP Resistor Networks


Resistor networks with custom package size and custom performance.
Page 1•1936

If you should need additional information on any type of Caddock resistor, please call or write to our engineering and manufacturing offices in Riverside, California.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type MG Precision High-Voltage Resistors

Highest Long-Term Stability Combined with Precision Tolerances and TC of 80 PPM/° C.

Caddock's Micronox® resistance films are the source of the Type MG Precision High Voltage Resistors' outstanding combination of performance features:

- Single-resistor values as high as 2000 Megohms.
- Maximum continuous operating voltages as high as 30,000 volts.
- Overvoltage capabilities of 150% of the standard working voltages for all models and values.
- Resistance Tolerances from ± 1.0% to ± 0.1%.
- Standard temperature coefficient of 80 PPM/°C in combination with resistance tolerances as tight as ±0.1%.

– plus

- Typical extended life stability of 0.02% per 1000 hours as demonstrated by reliability testing.

This exceptional performance has been proven through many years of use in equipment that demands the highest reliability and stability, including TWT amplifiers, X-ray systems, geophysical instruments and medical electronics.

Special High-Voltage Pulse Performance

All power ratings and maximum working voltage ratings are for continuous duty. These ratings are based on pre-stress voltage levels applied during the manufacturing process to provide for stable resistor performance even under momentary overload conditions.

Maximum working voltages up to 60% higher than the values listed in the table can be achieved through special factory conditioning, provided the power ratings are not exceeded. To specify maximum working voltages above the values listed in the table, add a "-15" to the model number (Example: MG750-15) and identify the overvoltage value with the initial order. (Note that the standard overload and overvoltage ratings do not apply to the "-15" resistors.)

Non-Inductive Performance

Caddock's patented Exclusive Non-Inductive Design uses a serpentine resistive pattern that provides for neighboring lines to carry currents in opposite directions, thereby achieving maximum cancellation of flux fields over the entire length of the resistor. This efficient non-inductive construction is accomplished without derating of any performance advantages.

Most models are available with Caddock's Patented Non-Inductive Design. To specify this performance, add an "N" to the standard model number. (Example: MG750N)

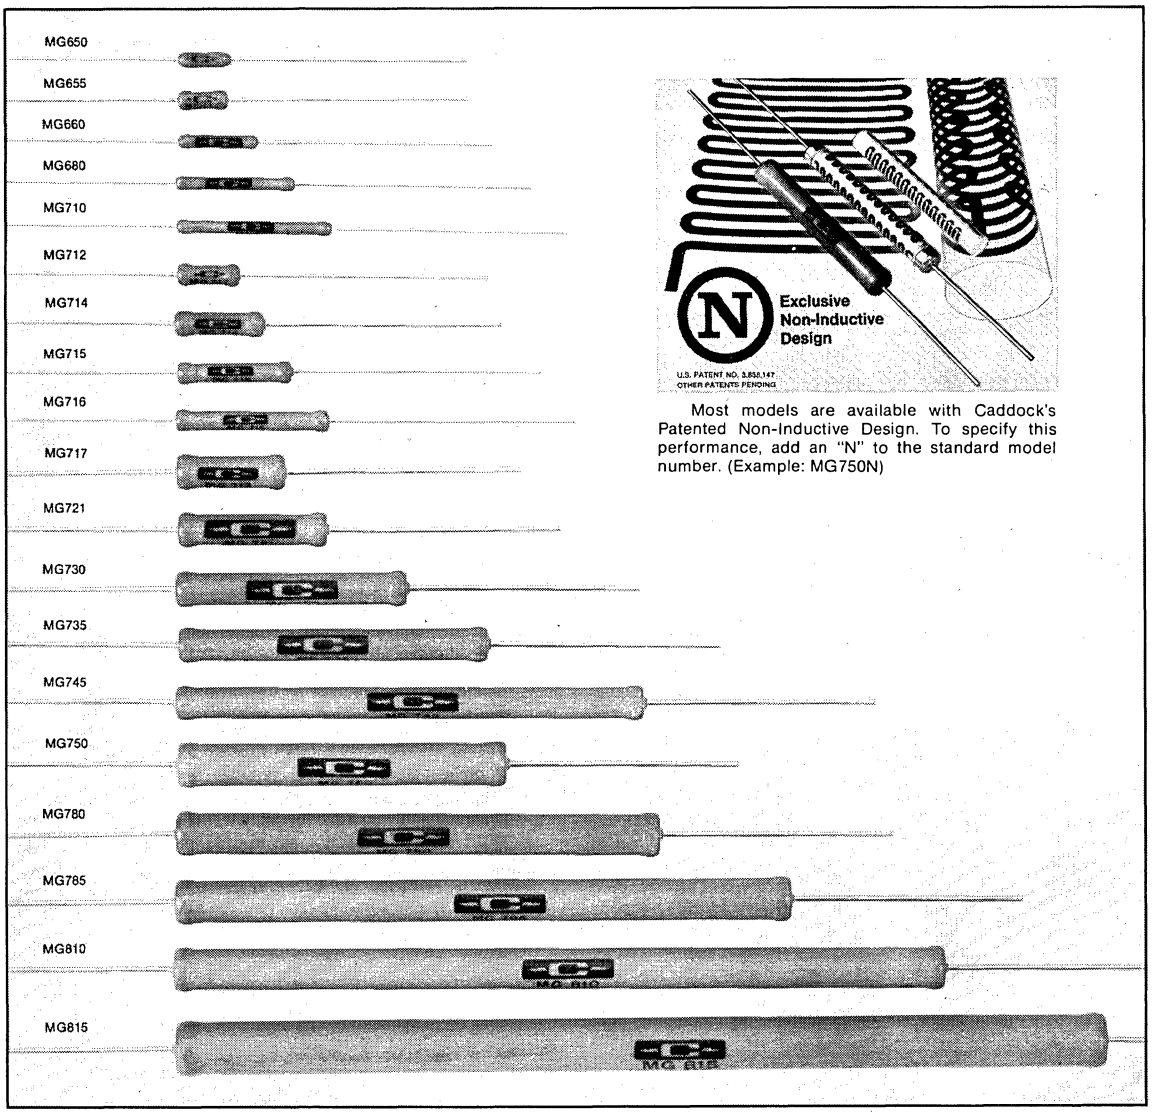
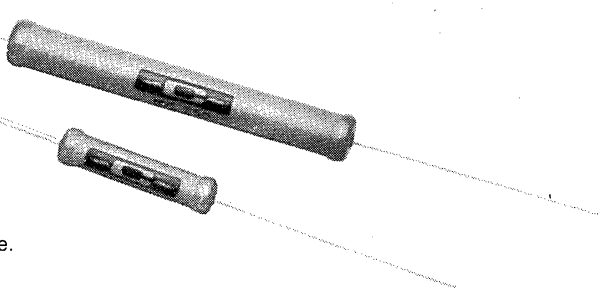
Type MG Precision High-Voltage Resistors

CADDOCK
HIGH PERFORMANCE FILM RESISTORS



Most models are available with Caddock's Patented Non-Inductive Design. To specify this performance, add an "N" to the standard model number. (Example: MG750N)

Matched Type MG Resistor Sets with Tight Ratio Tolerances and Ratio TC Tracking.



The temperature coefficients of Caddock Micronox® resistance films can be controlled to provide matched sets of Type MG resistors with tight ratio TC from -55° C to +105° C.

For high voltage divider applications, ±2% ratio tolerance and 25 PPM/° C ratio tracking is available.

For low voltage, high resistance applications - such as electrometer circuits or high-gain amplifiers - ±0.1% ratio tolerance and 10 PPM/° C ratio tracking is available.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type MR & MS Power Film Resistors

Power Film Resistor Family with Wide Resistance Range and +275° C Maximum Temperature.

With power ratings to 15 watts and voltage ratings as high as 6000 volts in an axial-lead resistor with values to 30 Megohms, the Type MS Power Film Resistors deliver the performance capabilities that can simplify circuit design and reduce equipment cost and complexity.

Type MS Power Film Resistors provide all these features in a single resistor:

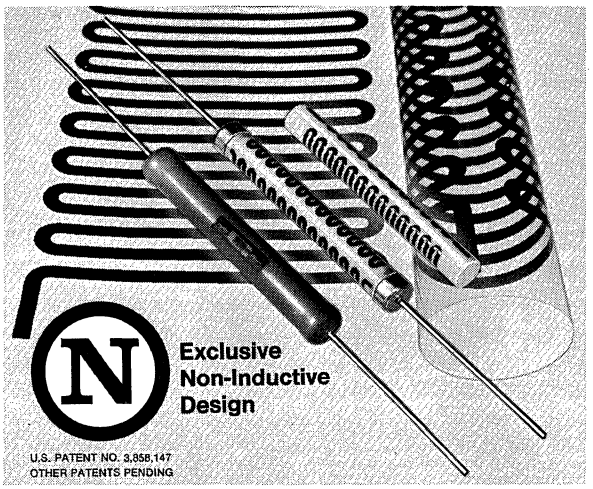
- Full power and voltage ratings, without derating —
  - for non-inductive performance.
  - for high resistance values that extend the critical resistance value up to 10 times.
- Higher voltage ratings without the limitations of minimum wire size and spacing.
- Excellent long-term stability.
  Tests demonstrate typical stability of 0.05% per 1000 hours over extended life.

Micronox® Resistance Films

Type MS performance begins with Micronox® resistance films, the basic element in every Caddock resistor. Produced exclusively by Caddock Electronics, these proven complex oxide films have been used reliably for 20 years in Caddock's precision power resistor products.

Micronox® resistance films are fired directly onto a ceramic core, in air, at 1400° F. These resistance films have demonstrated outstanding stability when exposed to a high ambient temperature, thermal shock and high power densities.

This unique approach to precision power resistors opens new design possibilities by providing wider resistance range, precise temperature characteristics, and higher temperature and power handling capability.



There's no derating of performance when you specify Caddock's Exclusive Non-Inductive Design.

When non-inductive performance is specified, we produce these power film resistors with a serpentine resistive pattern that provides for neighboring lines to carry currents in opposite directions, thereby achieving maximum cancellation of flux fields over the entire length of the resistor.

The result is a truly non-inductive resistor that is about as inductive as a straight piece of wire the length of the resistor body. This efficient design means faster settling times and minimum distortion in all types of high frequency circuits.

Non-inductive construction is available in most models. Specify by adding "N" suffix to Model Number. (Example: MS 310N)

Carefully Controlled Manufacturing and Test Procedures Assure Compliance with Strict Quality Control Requirements

Manufacturing Control

In addition to these procedures, all Type MS Resistors are produced under strict manufacturing controls with processes which include power conditioning, overvoltage conditioning and maximum temperature conditioning.

Quality Control

From the certification and testing of all materials to the supervision of manufacturing processes, all Caddock Type MS and MR Power Film Resistors are produced under procedures that have been approved for conformance to the requirements of NASA NHB5300.4(1C) and MIL-I-45208 in many recent surveys.

Reliability Verification

Type MS Resistors are included in the Caddock Reliability Testing Program. Conformance to specification parameters including Extended Life, Shock, Vibration and Humidity are verified on a periodic basis. Data from MS resistors can be compared by similarity to other Caddock resistor types, since Type ML, MM, MS, MP, MG and MK represent an identical combination of materials —aluminum oxide substrate, Micronox® resistance film and silicone insulating coating.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

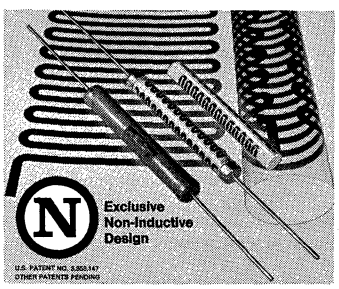
Type ML & MM Precision Film Resistors

High-Temperature Resistors for Geophysical, Aerospace and Industrial Requirements.

Type MM and ML resistors have a proven performance history in industrial, computer, military and space applications. With power ratings up to 3 watts and resistance values to 15 megohms, these outstanding resistors are ideal for applications requiring tolerances as close as 0.1% and extended life stability of 0.1% per 1000 hours.

The Type MM Precision Film Resistors provide a maximum operating temperature range of +275°C and both the Type MM and the Type ML have temperature coefficients of only 50 PPM/°C over the range from -15°C to +105°C.



Construction includes Micronox® resistance films fired onto a high strength solid ceramic core. End cap construction and a molded case completes the resistor assembly and provides increased resistance to abrasion and solvents.

Caddock's Exclusive Non-Inductive Performance can also be specified for most of these resistors by adding the "N" suffix to the model number. (Example: MM 236N)

Type MP Chassis Mounted Power Film Resistors

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type MP Chassis Mounted Power Film Resistors are made with Micronox® resistance films fired onto a ceramic substrate which is thermally bonded to an anodized aluminum base. By mounting this assembly directly to a metal surface for improved heat transfer, the high power capabilities of these unique resistors can provide increased packaging densities in many types of electronic equipment.

The special performance features of the Type MP Power Film Resistors include:

- Two case sizes that provide 15 watt and 30 watt ratings.
- Single-screw mounting to simplify attachment to the chassis or other heat conducting surface.
- A molded silicone case that encapsulates the resistor assembly to meet stringent environmental specifications.
- Extended-life stability better than 0.01% per 1000 hours has been demonstrated through a 5½ year, 50,000 hour program of continuous load-life testing.

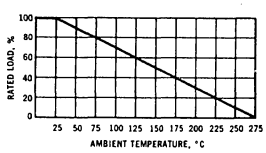
Detailed information on power ratings versus ambient temperature and chassis area has been provided on this page. A detailed report on the results of extended-life stability tests is available from the applications engineering group at Caddock Electronics, Inc.

Model No.	Power Rating†	Max. Voltage	Diel. Str.	High Temp. TC‡	Resistance Range		Dimensions				Terminals
					Min.	Max.	A	B	C	D	
MP312	15 Watts	300	600	50	10Ω	200 K	.600	.188	.185	.092	Gold Plated Solder Lugs
MP330	30 Watts	450	1000	50	10Ω	200 K	.850	.250	.250	.142	Gold Plated Solder Lugs

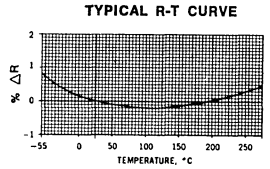
† Power rating based on chassis mounting with MP 312 on a 6" x 4" x 2" x .040" aluminum chassis and MP 330 on a 5" x 7" x 2" x .040" aluminum chassis.

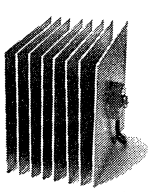
‡ TC: 50 ppm referenced to 25°C, ΔR taken at +150°C and +275°C. (Low temp. TC will be nominally −85 ppm/°C at −55°C. See typical R-T curve.)

DERATING CURVE



TYPICAL R-T CURVE





Stacked Type MP assemblies — constructed by bolting resistors between aluminum heat dissipating plates — provide a simple means of further improving packaging densities.

These charts of power ratings versus ambient temperature and chassis area show the high power levels that can be achieved with forced air cooling and with convection cooling in either vertical or horizontal orientation.

SPECIFICATIONS

Resistance Tolerance: ±1% standard (Other tolerances on special order.)

Insulation Resistance: 10,000 Megohms, dry. Method — Mil-R-18546D, para. 4.6.8.

Solderability: Per Mil-R-18546D, para. 3.7, para. 4.6.4.

Terminal Strength: Per Mil-Std-202, Method 211, Cond. A (Pull Test), 5 lbs., and Cond. B (Bend Test). Max. ΔR, .2% or .2Ω, whichever is greater.

Thermal Shock: Per Mil-R-18546D, para. 4.6.9, max. ΔR, .5% or .2Ω, whichever is greater.

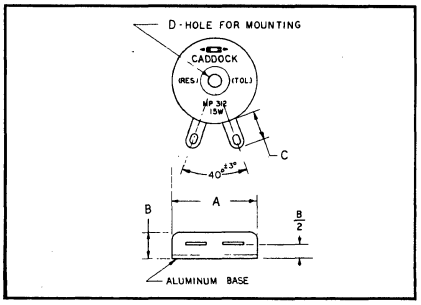
Momentary Overload: 2 times rated power or 1.5 times max. allowable working voltage, whichever gives the lower power, for 5 seconds. Max. ΔR, .5% or .2Ω, whichever is greater.

Moisture Resistance: Mil-Std-202, Method 106B, less steps 7a and 7b, max. ΔR, .5% or .2Ω, whichever is greater.

Life: Per Mil-R-18546D, para. 4.6.12, 1,000 hrs., Max. ΔR, 1% or .2Ω, whichever is greater.

Shock, Medium Impact: 50G, per Mil-Std-202, Method 205, Cond. C.

Vibration, High Frequency: Per Mil-Std-202, Method 204, Cond. B, Max. ΔR .2% or .2Ω, whichever is greater, through shock and vibration sequence.



CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type MK Low Cost Precision Film Resistors

Radial-Lead Resistors with Resistance Range from 10 ohms to 100 Megohms.

Here are the low cost precision resistors that provide high density packaging in large volume printed circuit applications. Available in two miniature rectangular package configurations with standard lead spacings, Type MK Precision Film Resistors now cover the entire resistance range from 10 ohms to 100 Megohms.

Constructed with Caddock Micronox® resistance films fired onto a solid ceramic substrate, Type MK Precision Film Resistors combine all of these outstanding advantages:

- ±1% resistance tolerance is standard and tolerances to ±0.1% are available on special order.
- Operating temperatures are from -55° C to +175° C.
- Full power rating at +125° C.
- Temperature Coefficient is only 50 PPM/° C up to 10 Megohms and 80 PPM/° C up to 100 Megohms, referenced to 25° C with the ΔR taken at -15° C and +105° C.
- Extended life stability is typically better than 0.1% per 1000 hours.
- Caddock's Non-Inductive Performance provides greater pulse fidelity and wider bandwidths in high frequency circuits.

This combination of performance advantages in a small, standardized case can simplify many engineering and production problems:

One size of Type MK resistor can replace many sizes of axial lead resistors.

This table of "RN" style axial lead resistors shows the many sizes and power ratings that can be replaced with either of the two models of Type MK Precision Film Resistors within the maximum allowable voltage ratings.

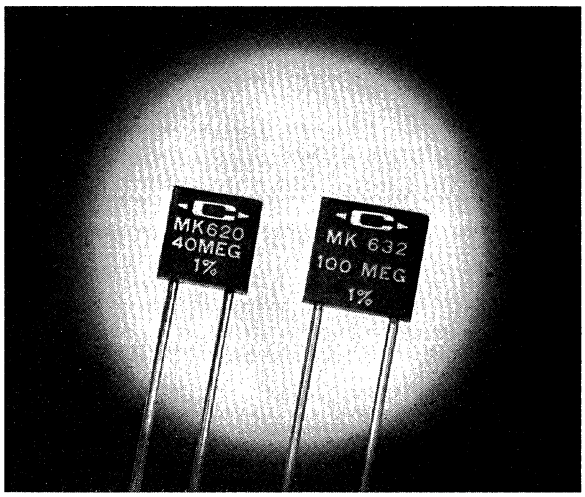
Comparison of Type MK and "RN" Ratings and Dimensions

Resistor Type	Power Rating	Maximum Resistance	Mounting Hole Spacing	
MK 120 or MK 620	**.50 WT.**	**40 Megohms**	**.150**	 Even the smallest Type MK resistor can replace all of these RN type resistors.
MK 132 or MK 632	**.75 WT.**	**100 Megohms**	**.200**	
RN50	.05 WT	1 Megohm	.400	
RN 55	.10 WT	5 Megohms	.500	
RN60	.125 WT	10 Megohms	.625	
RN65	.25 WT	20 Megohms	.875	
RN70	.50 WT	40 Megohms	1.000	

All outline drawings full size — dimensions in inches.

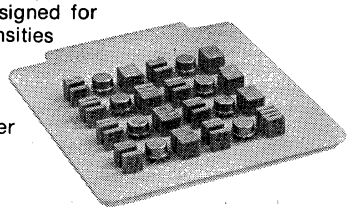
The largest Type MK — rated at .75 watt — requires less board space than even the 1/20th watt RN50.

The smallest Type MK — rated at .5 watt — provides power dissipation **equal** to the RN70 resistor. The RN70 resistor requires a mounting hole spacing of 1" and a side-to-side spacing of .250 inches, resulting in a total mounting area of .25 square inches — **10 times the area required for a .75 watt Type MK resistor!**



One standard resistor configuration can simplify board layouts.

With the exceptionally wide range of resistances that are available in each model of Type MK Precision Film Resistors, circuits can now be designed for maximum packaging densities without the need for leaving extra space where resistor value changes can require larger resistors or non-uniform lead spacings.



Standardization of resistor size can speed assembly procedures and reduce procurement costs.

The standardization of resistor size can pay additional dividends by simplifying assembly procedures. The radial leads do not require additional bending prior to insertion, and the standard lead spacing can reduce the time required for assembly.

The combination of higher power rating and smaller size can also lower procurement costs. By reducing the wide variety of sizes and types of axial lead resistors to a single, 'standardized' resistor type, unit prices can be lowered and inventory problems simplified.

Low Quantity Prices — Fast Delivery

Quantity prices for Type MK Precision Film Resistors are low, with many values priced under 60 cents each in medium-to-large production orders.

A pricing schedule for all values and models of Type MK Precision Film Resistors is available upon request. For specific price and delivery information, call or write to the main offices of Caddock Electronics in Riverside, California.

HIGH PERFORMANCE FILM RESISTORS

Type 1787 Current Shunt Resistor Networks

Accurate Current Sensing in Multi-Range Instrumentation

Type 1787 Current Shunt Resistor Networks utilize Caddock's Micronox® resistance films and advanced high thru-put laser manufacturing capabilities to achieve many vital advantages in precision current measurement circuits, including laboratory and bench-type digital instrumentation:

- The thin-profile single-package configuration replaces as many as four discrete current shunt resistors.
- The monolithic construction and standardized lead spacing simplifies installation.
- Caddock Micronox® resistance films provide exceptional stability for improved long-term measurement accuracy.

Eighteen standard models in six network arrangements provide the specific accuracy and resistance values required for a wide range of current measuring instruments and circuits.

Prototype quantities of most models of the Type 1787 Current Shunt Resistor Networks can be delivered from stock to within 6 weeks ARO.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

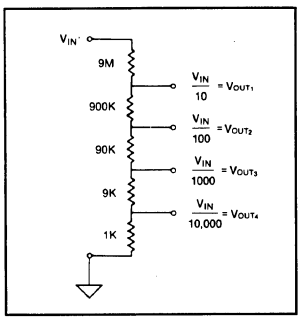
Type 1776 Precision Decade Resistor Voltage Dividers

Input Voltage Dividers for Digital Multimeters and Range-Switching Instruments.

Produced with Caddock Tetrinox® resistance films to achieve an exceptional combination of accuracy, temperature stability and long-term stability, these edge-mount precision decade resistor voltage dividers are now being widely specified for use in the input signal circuits of bench and laboratory digital instruments.

In addition to requiring less board space, these compact resistor networks deliver higher performance than selected discrete resistor sets and thin-film networks.



The 33 standard models in the expanded 'family' of Type 1776 resistor networks now include —

- 3-, 4- and 5-decade voltage dividers with ratios from 10:1 to 10,000:1
- 1,200 volts continuous ratings and overvoltage to 2,000 volts.
- Many combinations of ratio and absolute tolerances and ratio and absolute TC.

For complete information on quantity price and delivery, call our main offices in Riverside, California.

*Resistors Isolated

① **Ratio Tolerance:** Maximum ratio difference between any two resistors in the network.

② **Ratio Temperature Coefficient:** Ratio track between any two resistors in the network from 0°C to +70°C.

③ **Voltage Coefficient of Ratio (ppm/volt):** R_1 in series with any combination of R_2, R_3, R_4 and R_5, 100 volts to 1200 volts.

④ **Load Life:** Ratio stability of resistance under full load. 1200 volts DC applied to all resistors in series for 2000 hours at +70°C.

⑤ **Shelf Stability of Ratio:** Six months at shelf conditions.

⑥ **Overvoltage:** Maximum voltage of 1.67 times rated DC voltage. Volts DC or peak AC applied to R_1 and any combination of R_2, R_3, R_4, and R_5 in series with R_1 for 10 seconds.

⑦ **Voltage Rating:** DC or RMS AC voltage applied to all resistors in series.

Storage Temperature: −55°C to +85°C.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

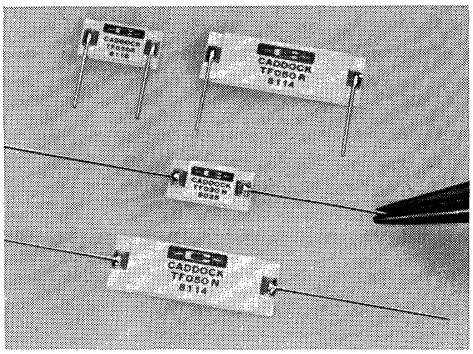
Type TF Low TC Ultra-Precision Film Resistors

Absolute TC to 5 PPM/°C — Values from 1 kohm to 125 Megohms — Absolute Tolerance to ±0.01%.

Type TF precision resistors employ the Caddock Tetrinox® resistance films — the resistance system that sets a new standard for high value, ultra-stable precision resistors that provide an exceptional combination of performance characteristics:

- **Ultra-Precision** – Seven standard resistance tolerances from ±1% to ±0.01%
- **A Wide Range of Resistance Values** – from 1 kohm to 125 Megohms.
- **Low Temperature Coefficients** – 5 PPM/°C, 10 PPM/°C and 15 PPM/°C.
- **Long-Term Stability** – to 0.01% per 1000 hours.

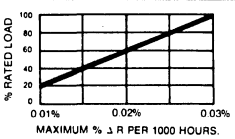
This completely new approach to quantity production of ultra-precision resistors is the result of combining our unique complex-oxide technology with an advanced high thru-put laser manufacturing capability.



Type TF - Standard Resistance Range - 1 kohm to 10 Megohms.

Model Number		Wattage @ +70°C.	Maximum Continuous Oper. Voltage	Resistance		Dimensions	
Axial Leads	Radial Leads			Min.	Max.	A	B
TF 020 N	TF 020 R	.33	300	1 K	2 Meg	.75 ±.020	.375 ±.020
TF 050 N	TF 050 R	.75	1400	10 K	10 Meg	1.5 ±.020	.50 ±.020

Load Stability:



Shelf Life: Typically 0.005% per year.

Type TF - Extended Resistance Range - 2 Megohms to 125 Megohms.

Model Number		Wattage @ +70°C.	Maximum Continuous Oper. Voltage	Resistance		Dimensions	
Axial Leads	Radial Leads			Min.	Max.	A	B
TF 626 N	TF 626 R	.33	300	2.01 Meg	35 Meg	.75 ±.020	.375 ±.020
TF 656 N	TF 656 R	.75	1400	10.01 Meg	125 Meg	1.5 ±.020	.50 ±.020

Load Stability: 1000 hours at rated voltage at +70° C, maximum ΔR 0.03%.

Shelf Life: Typically 0.010% per year.

Specifications

Apply to all Type TF resistor models

Absolute Temperature Coefficient: 5 PPM/°C, 10 PPM/°C or 15 PPM/°C. Referenced to 25°C, ΔR taken at -15°C and +105°C.

Resistance Tolerance: ±0.01%, ±0.025%, ±0.05%, ±0.10%, ±0.25%, ±0.50%, ±1.0%.

Storage Temperature: -55°C to +105°C.

Leadwire: Tinned Copper.

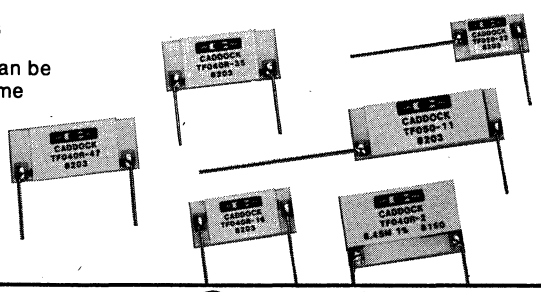
Custom Type TF Resistors

Additional cost savings can be realized when your high volume ultra-precision Type TF resistor is optimized for:

- Voltage rating.
- Power rating.
- Mechanical configuration.
- Ratio matched sets.



And for special requirements, custom Type TF resistors are available with:

- TCs of 5 ppm/°C, 10 ppm/° C 15 ppm/°C or 25 ppm/°C.
- Shelf stability of 0.0025% per year.

Type TF resistors can also be produced with custom-spaced radial leads that will plug directly into your existing circuit layouts.

Type T912 and T914 Precision Resistor Networks

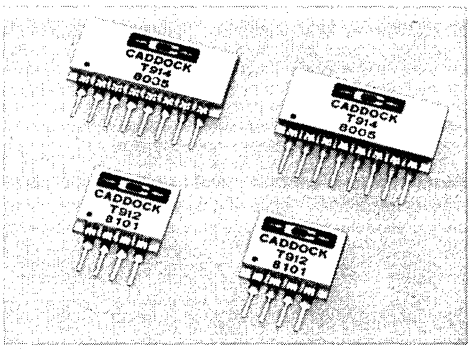
CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Resistor Pairs and Quads with Matched Characteristics for Precision Analog Circuits.

Type T912 and T914 Precision Resistor Networks are constructed with Caddock Tetrinox® resistance films to achieve the matched resistor characteristics and stability required by highly accurate amplifier circuits, voltage reference circuits and precision bridge circuits.

- **Ratio Tolerances** – from ±0.1% to ±0.01%.
- **Ratio Temperature Coefficients** – 10 PPM/° C, 5 PPM/° C or 2 PPM/° C.
- **Absolute Temperature Coefficient** – 25 PPM/° C.
- **Ratio Stability of Resistance at Full Load for 2000 hours** – Within ±0.01%.
- **Shelf Life Stability of Ratio for 6 Months** – Within ±0.005%.

Both the T912 and T914 are available in 14 standard resistance values between 1000 ohms and 1 Megohm. Caddock's high thru-put manufacturing capability assures delivery of prototype and large-volume production quantities from stock to within 6 weeks after receipt of order.



Standard Type T912 and T914 Precision Resistor Networks

In addition to the 14 standard **equal value** models of the Type T912 and T914, the Type T912 can also be ordered with —

- **10:1 resistance ratio** — for use with gain-setting amplifiers.
- **9:1 resistance ratio** — for use in voltage reference dividers.

T912 - A 10K - 010 - 02

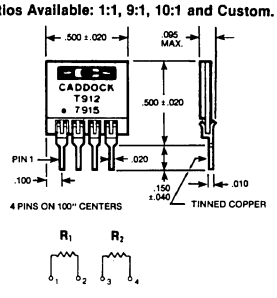
1K	10K	40K	200K	500K
2K	20K	50K	250K	1 Meg.
5K	25K	100K	400K	

Special or mixed resistance values are available as custom networks. See the custom section at the bottom of this page.

*(This information appears on the back side of the network)

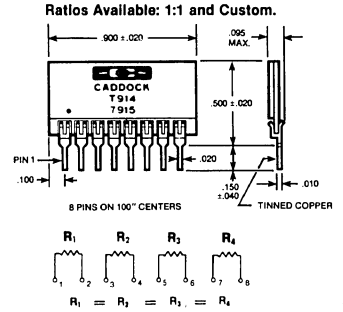
Type T912

Ratios Available: 1:1, 9:1, 10:1 and Custom.



Type T914

Ratios Available: 1:1 and Custom.



Specifications

Absolute Tolerance: 0.1% for all resistors.

Absolute Temperature Coefficient: ±25 PPM/° C. Referenced to 25° C, ΔR taken at 0° C and 70° C.

Voltage Rating: 30 Volts DC or RMS AC applied to R_1, R_2, R_3, or R_4.

Power Rating: 0.10 watt applied to R_1, R_2, R_3, R_4 (not to exceed rated voltage).

Package Power Rating: Type T912, 0.200 watt. Type T914, 0.400 watt.

Storage Temperature: -55° C to +105° C.

Insulation Resistance Between Isolated Pins: Pin 2 to Pin 3, Pin 4 to Pin 5, or Pin 6 to Pin 7, 1000 Megohms, minimum.

Dielectric Strength Between Isolated Pins: 50 volts RMS AC.

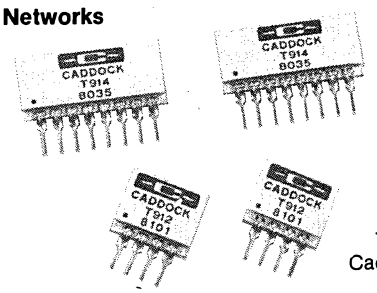
Ratio Stability Under Load: Ratio change between any two resistors in the network under full load for 2000 hours at 70° C, 0.01% maximum.

Shelf Stability of Ratio: Six months at shelf conditions, 50 PPM.

Custom Model T912 and T914 Precision Resistor Networks

For applications requiring non-standard resistance values, the T912 and T914 custom configurations can include these special features:

- Mixed resistance values with a maximum ratio of 250-to-1. (Example: 1.0 Megohm and 4K)
- Absolute TC as low as 15 PPM/° C.
- Ratio TC as low as 2 PPM/° C.
- Custom voltage ratings.
- Matched resistors of any special value between 1K and 2 Megohms.



Identification of the electrical characteristics of each T912 and T914 resistor network is included on the back side of the network.

For performance, price and availability of custom T912 and T914 resistor networks, contact Caddock Electronics' main offices in Riverside, California.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

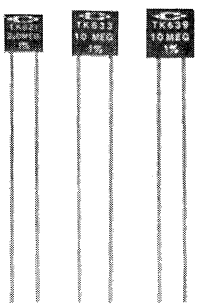
Type TK Temp-Stable Precision Film Resistors

Small Package with Low TC of 10 PPM/°C and Resistance Range from 1 kohm to 10 Megohms.

Caddock introduces a new design element for precision electronic circuitry — an advanced technology breakthrough that solves many critical circuit stability problems — the **Type TK Temp-Stable Precision Film Resistors with the Tetrinox® resistance system.**

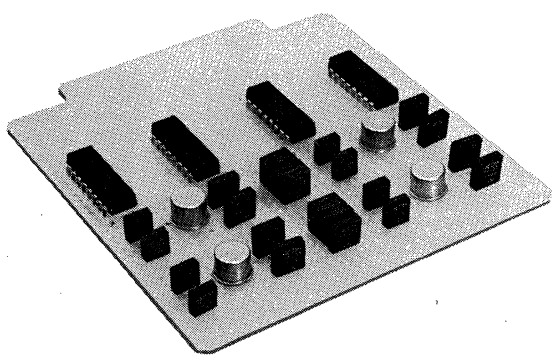
Type TK Temp-Stable Precision Film Resistors provide a combination of performance advantages never before available in a resistive component:

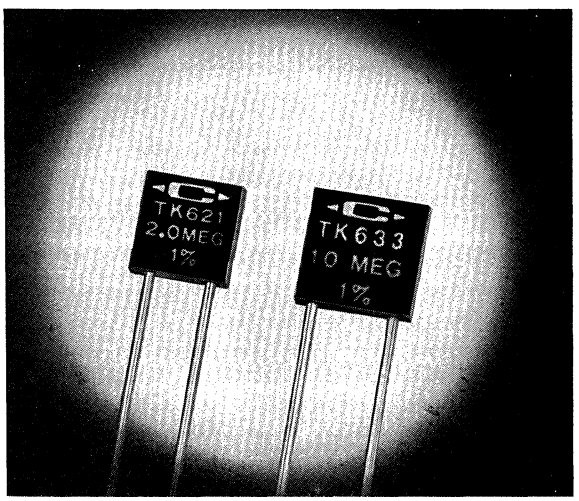
- **Temperature Stability** — better than 10 PPM/°C over the entire temperature range from −55°C to +125°C!
- **Long-Term Absolute Stability** — better than ±0.05% per 2000 hours of operation.
- **Extended Resistance Range** — from 1000 ohms to 10 Megohms.
- **Precision Tolerances** — ±1% is standard, and tolerances as close as ±0.05% are available.
- **Wide Operating Temperature Range**—from −55°C to +175°C.
- **Small Size** — with two miniature rectangular cases for maximum packaging density and minimum mounting area.
- **High Power Density** — with power ratings of .2 watt and .3 watt in molded cases, the largest of which is a standard CK 06 package.
- **Highest Performance-to-Cost Ratio** — with many values priced below $2.00 each in 1000 lot quantities.



(Photos show resistors full size)

Building on 20 years of experience with our unique complex-oxide technology, Caddock has perfected the Tetrinox® resistance system — the first high resistance system to provide a TC that is well within 10 PPM/°C and that is also essentially linear over the entire temperature range from −55°C to +125°C.





The exceptional performance of Type TK resistors can achieve improvements in many circuit applications:

Low TC "Matched-Pair" Voltage Dividers Can be Assembled Without Pre-Selection of Resistors.

An important application for Type TK resistors is in "matched-pair" voltage dividers where the low 5 PPM/°C temperature coefficient provides ratio tracking of less than 10 PPM/°C without resistor pre-selection or special testing.

With factory selection, Type TK resistor pairs can be matched to within 1 PPM/°C.

Extended Resistance Range Reduces Power Requirements

Because the Type TK resistors provide resistance values as high as 10 Megohms — values that are up to 100 times higher than other types of ultra-low TC resistors — engineers can now design precision circuits with lower current drain and lower power requirements.

High Density Packaging

The radial lead mounting and small rectangular case of Type TK resistors permits high packaging densities in low profile electronic circuitry. And because both models of Type TK resistors are available in an exceptionally wide range of resistances, lead spacing and mounting space can be standardized.

For additional information on the Type TK resistors for your high stability circuits, contact the engineering staff of Caddock Electronics in Riverside, California. They can assist you in determining the exact temperature coefficient and tolerances your application requires, and will provide both evaluation and production quantities of these new resistors on fast-delivery schedules.

HIGH PERFORMANCE FILM RESISTORS

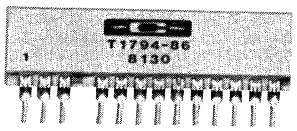
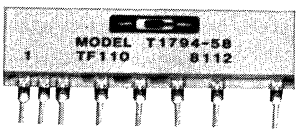
Type T1794 Custom Precision SIP Resistor Networks

Resistor Networks with Custom Package Size and Custom Performance.

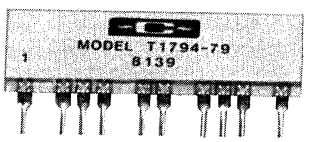
For precision analog designs with special circuit requirements Caddock Type T1794 Custom Precision SIP Resistor Networks are available with performance that includes —

- From 2 to 15 resistors per assembly.
- Absolute tolerances from 1.0% to 0.01%.
- Custom voltage and power ratings.
- Resistance values from 500 ohms to 10 Megohms.
- Absolute temperature coefficients from 15 PPM/°C to 50 PPM/°C.
- Ratio stability of resistance at full load for 2000 hours to within ± 0.01%.
- Shelf life stability of ratio for six months to within ±0.005%.

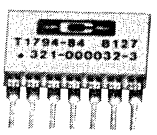


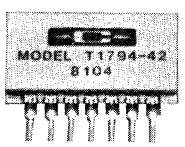


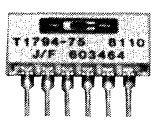
The unique thin-profile, single-in-line edge-mount package design allows the wide range of flexibility necessary to blend the performance of Tetrinox® resistance technology with particular circuit specifications to arrive at the final network package size, pin spacing and pin style.



In addition to the normal upright configuration with SIP-socket pin spacing, special low-profile packages with extended leads and right-angle leads are also available.





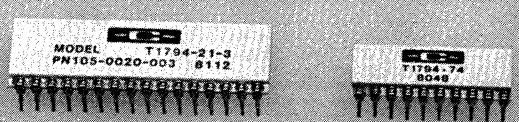


By optimizing both performance and configuration many designers find that these precision networks can achieve savings in both component cost and insertion costs — even in production-lot quantities as low as 1000 units.

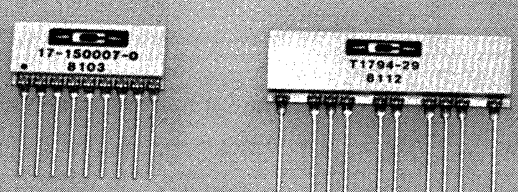
A large part of our high thru-put manufacturing capacity is now committed to the production of these custom precision resistor networks. Custom network designs for requirements that range from 500 networks per year to over 400,000 networks per year are now in production.

For immediate engineering information on the custom precision resistor network configuration that can best meet your needs, call or write to our Applications Engineering Group in Riverside, California, and we will be pleased to provide both technical performance and pricing information.

Optional Pin Styles



Low-profile, single-in-line package with one row of right-angle pins.



SIP package with extra-long pin length.

High Performance Film Resistors

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

The outstanding levels of performance and reliability that Caddock resistors provide is maintained through a continuous program of testing and process control that includes every step in the production process.

Manufacturing Control

Our manufacturing controls include processes for power conditioning, over-voltage conditioning and maximum temperature conditioning. We also perform many in-process tests to verify the performance levels and consistency of all of our resistor types, and to screen out defects not detectable by visual inspection.

Quality Control

The Caddock Quality Control System covers every step in the manufacturing process from the examination of incoming raw materials to the final testing and packaging of each resistor.

To meet the most stringent QC requirements, Caddock's Quality Control Procedures have been approved as being in conformance to the requirements of NASA NHB5300.4(1C) and MIL-1-45208 in recent surveys.

Reliability Verification

In addition to the tests for tolerance, stability and temperature characteristics that are part of our normal manufacturing procedures, we also perform semi-annual reliability tests to confirm compliance to our exacting product specifications.

The flow diagram of the Caddock Reliability Test Program illustrates the sequence of the eleven tests in this program.

The test procedures in the Caddock Reliability Testing Specification 271-02 generally follow the format of MIL-R-55182 and MIL-Std-202. The results of these tests may be used to qualify Caddock resistors for substitution in existing designs.

Reliability Test Summary — "Caddock Report No. 1".

To provide electronic engineers with actual stability data — data that can be used to determine actual improvements in circuit performance — we have compiled test results taken since 1972 from our continuing reliability program.

Of the eleven tests in this program, we have graphically summarized data from the six tests that measure resistor stability under conditions most important to circuit designers:

1 — Temperature Cycling Tests

2 — Overload Tests

3 — 2000 Hour Load-Life Tests

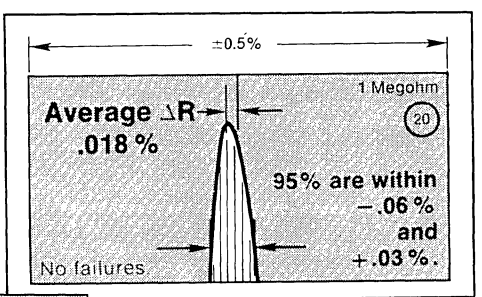
4 — Moisture Resistance Tests

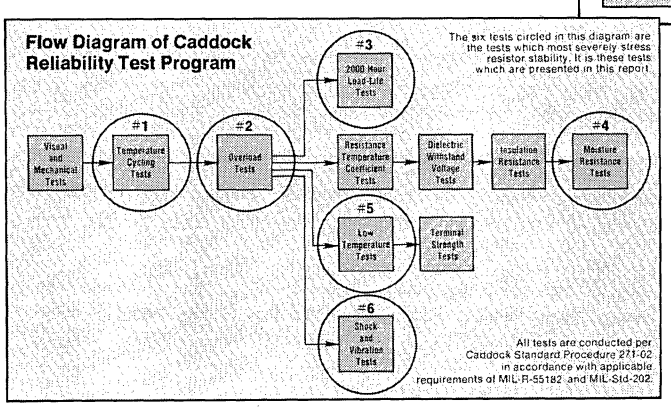
5 — Low Temperature Operation

6 — Shock and Vibration Tests

This stability data appears in a series of 96 graphs that show the actual stability of 740 Caddock High Performance Film Resistors.

The individual and average resistance change is also shown in these graphs for the low, high and 'critical' values, to provide data that can be used to pre-determine actual circuit performance and long-term equipment specifications.





A copy of the 12-page brochure describing the results of these reliability and stability tests is available from the main offices of Caddock Electronics, Inc. in Riverside, California.

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire guage

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction code
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct curent
DIL dual in-line
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LSI large scale integration
LVDT linear velocity displacement transformer

M

MATV master antenna television
μF microforad
MHz megahertz
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NIM nuclear instrumentation module
NOR not OR

O

OEM original equipment manufacturer
OR a logical operator

P

pF picofarad
PC printed circuit
PCB printed circuit board
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PPI plan position indicator
PROM programmable read only memory
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

YIG yttrium iron garnet

CAL-R, INC. THICK FILM

CERMET CHIP RESISTORS

ELECTRICAL

Resistance Range: 10 ohms to 40 megohms
Tolerance: 1% (F), 2% (G), 5% (J), 10% (K) standard and 20% (M)
Power Rating: 100 Milliwatts CR1, 200 Milliwatts CR2. 250 Milliwatts CR3 & 300 Milliwatts CR4, 350 Milliwatts CR5
Short Time Overload: Less than 0.50% ΔR
Temperature Coefficient of Resistance: ±150 ppm standard thru 1 megohm; ±350 ppm 1.1 megohm thru 10 megohms; ±50 ppm available 100 ohms thru 750K ohms. All TCR ratings as measured from −55°C to +125°C with 25°C reference point.
Standard MIL Decade Values: 10 ohms thru 20 megohms.

PRECISION THICK FILM NETWORKS

Cal-R thick Film Passive Systems develops and produces, to customer requirements, packaged resistor networks including digital to analog A-D binary ladders (through 12 bits), BCD bipolar ladders and custom precision resistor networks.

Cal-R manufactures ceramic substrates for the Digital Watch market and custom R-C networks for hi-rel and commercial applications.

Cal-R thick film resistor compositions fused to a high purity 96% aluminum substrate insure low thermal gradients, high thermal stability and matched electrical characteristics.

WIREWOUND RESISTORS • THICK FILM • THERMISTORS

CAL-R® INC. WIRE WOUND RESISTORS

PRECISION POWER RESISTORS

FEATURES

1. Copperweld leads standard. Nickel A or Alloy 180 available.
2. Core-alumina and steatite ceramics.
3. Silicone coating to give maximum wire protection and extra high resistance to moisture.
4. Failure rates of less than .006% per 1000 hours @ +25°C with 60% confidence.

ELECTRICAL CHARACTERISTICS

A. TOLERANCES: 5.0% to .01%. 1% standard for off-shelf delivery. Special matching available to .001% tolerance.
B. TEMPERATURE COEFFICIENT: 20 ppm/degree C standard. Special T.C.'s to 5 ppm/degree C available.
C. Dielectric strength greater than 1000 V.A.C.
D. Special configurations available on request.
E. SA (X) Types Thermal shock proof from 275°C to —55°C.
F. SAV (X) Types Thermal shock proof from 350°C to —55°C.
G. STABILITY: consistent with tolerances, all parts stabilized in production. Less than 0.1% drift in 2000 hours operation at full Cal-R wattage rating for 1% tolerance parts.
H. RESISTANCE RANGES: .05 ohms to 250K ohms.
I. INDUCTIVE TYPES: Single layer space wound with largest wire permissible.
J. Non-inductive Types feature dual balanced windings for minimum inductance.

ENVIRONMENTAL

Meet or exceed applicable paragraphs of MIL-R-26E and MIL-R-39007.

WHEN ORDERING SPECIFY: TYPE, WATTAGE, RESISTANCE AND TOLERANCE.

POWER RESISTORS

FOUR STANDARD MC TYPE RESISTOR SPECIFICATIONS IN MIL-R SIZES

OUTSTANDING FEATURES

1. Copperweld leads hot tin dipped for maximum solderability.
2. Completely welded construction terminal to terminal.
3. High density extruded aluminum housing provides superior heat conduction.
4. Housing deep finned for maximum heat dissipation under natural and forced convection.
5. Windings—High uniformity single layer space wound, designed to give maximum core coverage for even heat dissipation. MCX (non-inductive) types have dual balanced windings for minimum inductance.
6. Core—Steatite ceramic, centerless ground for uniformity.
7. Silicone coated resistance element to give maximum wire protection and extra high resistance to moisture.

ELECTRICAL CHARACTERISTICS

Tolerances—5.0% to .05%, 1% standard for off-shelf delivery.

Temperature Coefficient—20 ppm/degree C standard. Special T.C.'s to 5 ppm/degree C available.

Dielectric strength greater than 1000 V.A.C. on MC-100 and MC-250, and greater than 2000 V.A.C. on MC-500.

Dielectric Test—performed on 100% basis.

Stability—consistent with tolerances, all parts stabilized in production. Less than 0.5% drift in 1000 hours operation at full Cal-R wattage rating for 1% tolerance parts. Resistance ranges—.05 ohms to 210K ohms.

ENVIRONMENTAL

Meet or exceed all requirements of MIL-R-18546D, including "N" characteristic and MIL-R-39009.

CAL-R, INC. WIRE WOUND RESISTORS

POWER RESISTORS ... Cont'd.

T-5 (5 WATTS) OUTSTANDING FEATURES

1. Copperweld leads hot tin dipped — Gold plated DUMET or "A" nickel available.
2. High density extruded aluminum housing provides superior heat conduction.
3. Housing deep finned for maximum heat dissipation.
4. Windings — high uniformity single layer space wound, designed to give maximum core coverage for even heat dissipation. T5X (non-inductive) types have dual balanced windings for minimum inductance.
5. Core — Alumina ceramic, centerless ground for uniformity.

T-3 (3 WATTS) OUTSTANDING FEATURES

1. Windings — Reverse pie wound — all pies filled for maximum heat dissipation.
2. Unique recessed end cap designed to isolate winding termination from all lead stress.
3. Protective overcoating covering entire resistor before molding insures maximum protection and secures winding without introducing stress.
4. Resistor element encased in nonburning epoxy by transfer molding techniques.
5. Copperweld leads hot tin dipped standard — Gold plated DUMET or "A" nickel available.

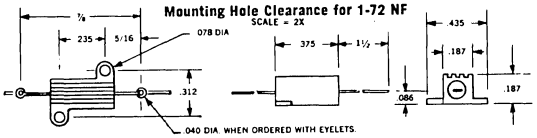
*200 VAC MAX.

T-5 ELECTRICAL CHARACTERISTICS

TOLERANCES: 5.0% to .05%. 1% standard for off-shelf delivery.
TEMPERATURE COEFFICIENT: 30 ppm/°C standard. Special T.C.'s to 5 ppm/°C available.
STABILITY: consistent with tolerances, all parts stabilized in production. Less than 0.5% drift in 1000 hours operation at full CAL-R wattage rating for 1% tolerance parts.
RESISTANCE RANGES: .5 ohms to 3 K ohms.
DIELECTRIC STRENGTH: greater than 500 V.A.C.
DIELECTRIC TEST: performed on 100% basis.

T-3 ELECTRICAL CHARACTERISTICS

TOLERANCE: 1 to .005% absolute. To .002% matching tolerance for matched sets.
TEMPERATURE COEFFICIENT: 10 ppm/°C is standard. Special TCs in ranges from +6000 ppm to 2 ppm/°C available.
STABILITY: consistent with tolerances. All parts stabilized in production, including 1% parts. Components available with stability of .002% per year.
WINDINGS: multiple pie reversed type to minimized inductance. Special windings available to provide fast rise times.
RESISTANCE: Ranges 3 K ohms to 300 K ohms.
MAXIMUM WORKING VOLTAGE: 200V.



PRECISION RESISTORS

OUTSTANDING FEATURES

1. All pies filled for maximum heat dissipation.
2. Unique recessed end cap designed to isolate winding termination from all lead stress.
3. Terminals welded to end cap for maximum strength — will withstand 15 lbs. linear pull.
4. Double slots tangent to mandrel to prevent shorting between pie windings eliminating space-wasting construction features or the need for insulating tape.
5. Protective overcoating covering entire resistor before molding insures maximum moisture protection and secures winding without introducing stress.
6. Standard leads — copperweld hot tin dipped or annealed Dumet gold plated.
7. Special matching available to .001% tolerance.

ELECTRICAL CHARACTERISTICS

TOLERANCE: 1 to .005% absolute. To .002% matching tolerance for matched sets.

TEMPERATURE COEFFICIENT: 10 ppm/°C is standard. Special TCs in ranges from +6000 ppm to 2 ppm/°C available.

STABILITY: consistent with tolerances. All parts stabilized in production, including 1% parts. Components available with stability of .002% per year.

WINDINGS: multiple pie reversed type to minimized inductance (except on Miniature Series). Special windings available to provide low rise times.

RESISTANCE: Ranges 1 ohm to 10 megohms.

PHYSICAL CHARACTERISTICS

MATERIAL: Hi-Temp epoxy with matching coefficient of expansion between core and case. Leads are gold over Dumet.

ENVIRONMENTAL

Meet or exceed all requirements of MIL-R-93C and MIL-R-39005.

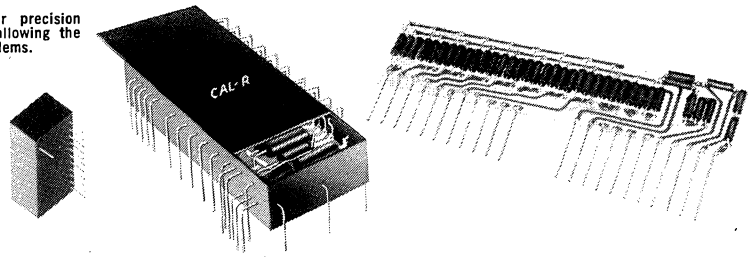
PRECISION RESISTOR NETWORKS

Cal-R engineers, specialists in advanced network design, offer precision assemblies, packaged to meet the most exacting specifications, allowing the circuit designer maximum freedom without costly packaging problems.

GENERAL SPECIFICATIONS

RESISTOR VALUES: From 1 ohm thru 5 megohms
FULL SCALE ACCURACY: to .005%
TEMPERATURE COEFFICIENT TRACKING: to 1 PPM/°C.
TEMPERATURE COEFFICIENT ABSOLUTE: to 2 PPM/°C.
AMBIENT TEMPERATURE RANGE: —55°C to +125°C.
STANDARD TEMPERATURE COEFFICIENT: 0 to ±10 PPM.
STABILITY: to 10 PPM per year.
FAST RECOVERY TIME: to within .02% of final value within 100 ns.



CAL-R, INC.

CARBORUNDUM NON-INDUCTIVE POWER RESISTORS

Choose Type SP for great A-C power handling capability, whether it be at power frequency or many megahertz.

Choose Type A when high resistance is required in a high power non-inductive resistor.

Choose Type AS for its ability to absorb huge amounts of energy and for its non-inductive property at high voltage.

CHARACTERISTICS	Type SP	Type AS	Type A
Maximum Operating Temperature: °C	350	230 150*	230
Temperature Coefficient: Percent per degree C, −55°C to maximum rated temperature	0.075	0.075	0.10
Voltage Coefficient: Maximum percent per kilovolt per inch active length (overall length less termination)	1.0	1.0	—
Short Time Overload: Maximum percent change after 5 cycles 10 times rated power, 5 seconds on, 90 seconds off	2.0	2.0	—
Moisture Resistance: Maximum percent change when tested per MIL-STD-202 method 103	2.5	2.5	2.5

*with mylar insulation

TYPE 234 AND 231 RESISTORS

Carborundum type 234 and 231 resistors are a small size non-inductive bulk type resistor (there are no spirals or windings), capable of dissipating a full 10 watts of power (Type SP) or absorbing 500 Joules of energy (Type AS).

234 — ¼" x 1"
231 — 5/32" x ¾"

Specifications	234SP	234AS	231SP	231AS

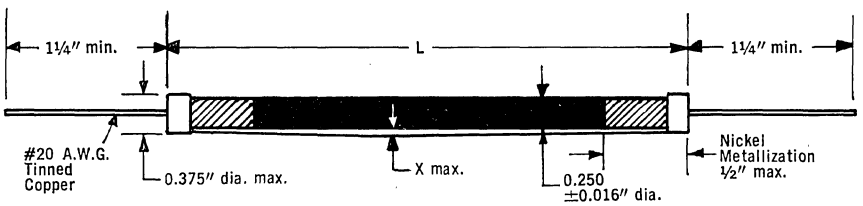
TYPE AS "PENCIL-SHAPED" STYLE

The high-energy absorbing characteristic of the Carborundum type AS material is available in these pencil-shaped resistors to offer the unique non-inductive high-voltage properties in a compact easily wired configuration.



Type No.	L +0.25 −0	X	Resistance Available (ohms) Premium to	Standard to	Premium to		Average Power @ 40°C (watts)	Peak Energy (joules)	Peak Voltage (volts)
104 AS	4	0.08	55	420	9,000	18,000	9	1,200	9,000
106 AS	6	0.12	90	700	15,000	30,000	13	1,900	15,000
109 AS	9	0.16	150	1,150	25,000	48,000	20	3,000	25,000

TYPE AS EPOXY COATED STYLE

Carborundum Type AS High-Energy Ceramic Resistors are available with an epoxy polyurethane coating which protects the resistors body from contaminants. Its is especially useful where the resistor is employed in an application where it is not protected from a dirty ambient atmosphere or where it is immersed in a cooling or dielectric fluid.

In air the coated resistor can safely dissipate 75% of the power dissipated by an uncoated part.

The overall length, L, of the coated resistor is approximately 0.25" longer than the uncoated part; the diameter, D, is approximately 0.30" greater.

CARBORUNDUM

CARBORUNDUM NON-INDUCTIVE POWER RESISTORS FOR SPECIAL PROBLEM SOLUTIONS

TYPE AS DISC AND WASHER STYLES

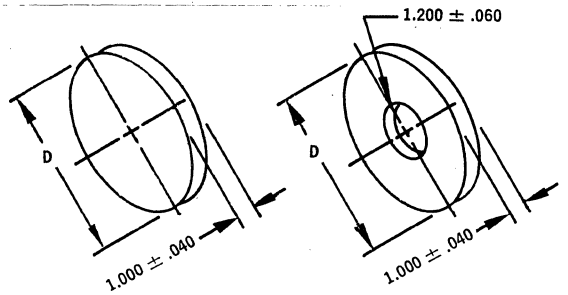
Carborundum Type AS Disc and Washer Ceramic Resistors are a bulk-type low resistance element, and therefore have the ability to absorb instantaneously great surges of energy with virtually zero inductance.

Maximum Peak Voltage: 5000 volts.

Maximum Temperature: 230°C.

Power Rating: In free air, parts will safely dissipate 2.5 watts per square inch of surface area at 40°C.

Temperature Coefficient of Resistance: −0.1%/°C to 0.0%/°C.



Style		Diameter "D" (inches)	Peak Energy (joules)	Available Resistances	
				Minimum	Maximum
911DS	Solid Disc	1.60 ± 0.06	9,000	1.6	800
912DS	Solid Disc	2.37 ± 0.06	21,000	0.7	90

916WS	Washer	4.75 ± 0.08	79,500	0.2	24

CARBORUNDUM® VARISTORS

Standard varistors described below have a 10% tolerance on voltage. Also available: leadless discs and rods, voltages specified at intermediate values or at other currents, and voltage tolerances of ±15% and ±20%. Available at extra cost: voltage tolerances of ±5% and ±7%, color coding, and special coatings.

Standard rod varistors have a blue epoxy coating. Available at extra cost: formed leads for printed circuit board insertion.

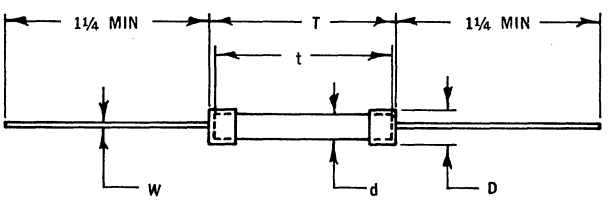

Figure 1

Standard disc varistors have a black flame-retardant PVC coating. Also available: Glyptal coating and kinked leads for printed circuit board insertion.

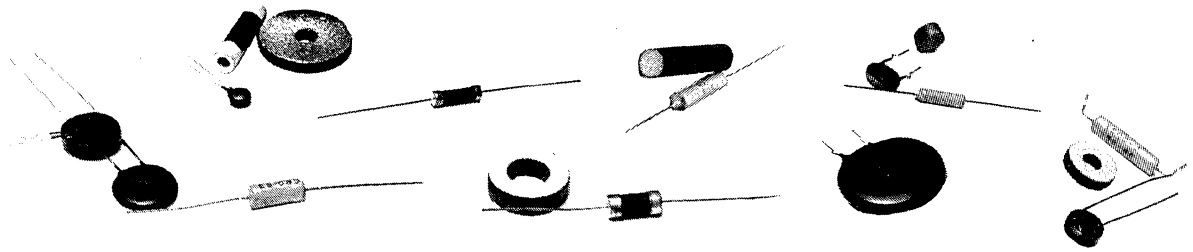
CARBORUNDUM

CARBORUNDUM® VARISTORS



Carborundum silicon carbide varistors are voltage-dependent resistors which are offered in a wide variety of configurations, including discs, rods, and washers. In addition to the sizes shown on these pages, rods are available up to 18 inches in length, washers are available up to 3½ inches in diameter. Typical uses include limitation of peak discharges, spike suppression, stabilization of voltages, and generation of nonlinear functions.

Varistors are specified by the voltage measured across them, suitably toleranced, at some constant current. The slope of the voltage-current characteristic is most often given by the maximum voltage ratio for two specified currents.

In general the characteristic for a varistor may be approximated by the equation:

$$i = Ke^n$$

where i and e are instantaneous current and voltage respectively, K is a proportionality constant, and n is an exponent applicable in the range in which the varistor is used: most often it is between 3 and 5.

The silicon carbide varistor is a "forgiving" component. When hit by a voltage surge, the energy is absorbed throughout its body, not at a junction. A voltage surge beyond the design level causes substantial increase in current and energy absorption, but not a catastrophic failure.

SMALL DISC VARISTORS

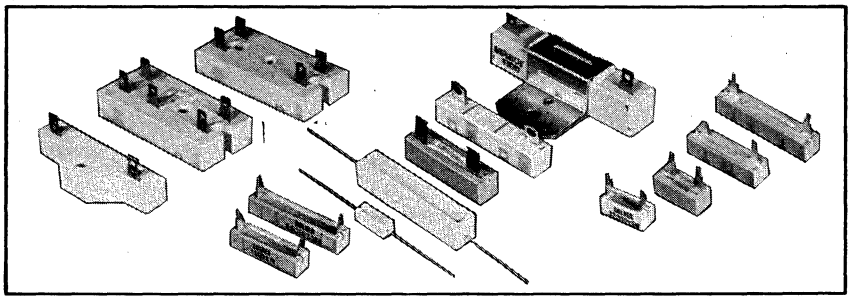
CARBORUNDUM

COLBER RESISTORS

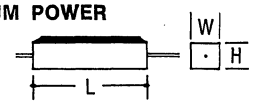
WIRE WOUND / TEMPERATURE SENSITIVE / CERAMIC ENCAPSULATED / FUSISTORS (FUSEABLE RESISTORS)



The resistance elements of the Colber resistors are uniformly and tightly wound on glass fiber cores using premium quality wires. Tinned steel or brass terminals are secured to the element by automatic assembly equipment. The high degree of automation used in manufacturing this resistor allows you to use a high quality wire wound unit at a cost of approximately two cents.

RESISTORS FIXED WIRE WOUND

MEDIUM POWER



Part No.	Wattage Rating	L± 1/16"	H± 1/32"	W± 1/32"	Resist. Ranges (OHMS) Standard Temp. Coefficients .06%/°C	.03%/°C

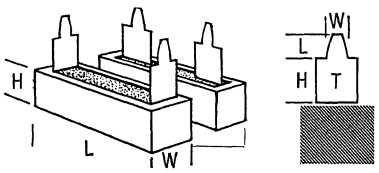
CW25	25	2 1/2	5/8	5/8	—	4-400

Consult Factory for Lower Values and Special Temperature Coefficients.

ENCAPSULATED RESISTORS



1. **Terminals** — Brass, tin plated, Parallel or perpendicular to the case.
2. **Body**—Ceramic Case, Inorganic, Fireproof Fill.
3. **Resistive Element** — High quality Colber type as in all our resistors.
4. **Tolerance** — 10% Standard, 5% Available.

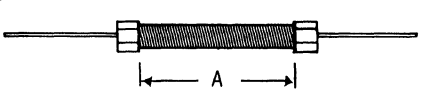
AXIAL LEAD COLBER RESISTORS

TYPE AL — WIRE WOUND



LEAD SIZES AVAILABLE:
.032 × 1⅜ Tinned Copper
.032 × 1½ Tinned Copper
.032 × 1 11/16 Tinned Copper
.036 × 1 11/16 Tinned Copper
.040 × 1 11/16 Tinned Copperweld
.040 × 1⅞ Tinned Copperweld

LEAD MATERIAL:
Copper — Oxygen free, dead soft, Tinned Copperweld — Steel core, copper clad, Tinned.

CORE MATERIAL:
Silicone impregnated, braided fiberglas.

RESISTANCE TOLERANCE:
±10% Standard
±5% Available

EEM PRODUCT SELECTION GUIDES

Use the EEM Product Selection Guides. There are 33 Guides in this edition of EEM. See page 2 (1•2, 2•2, 3•2) of each volume to locate the Product Selection Guides that pertain to your needs.

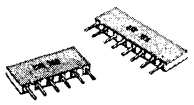
CTS OF BERNE, INC.

SUBSIDIARY OF CTS CORPORATION, ELKHART, INDIANA

WORLD LEADER IN CERMET RESISTOR TECHNOLOGY

SINGLE-IN-LINE CERMET RESISTOR NETWORKS

750 SERIES SINGLE-IN-LINE CERMET RESISTOR NETWORKS



- 6, 8 and 10-pin modules on .100″ lead centers
- Resistance: 32Ω - 220 KΩ* ±2% (for 750-85 Series, see table below schematic)
- Power ratings @ 70°C per module: 6 pin .9 watt; 8 pin 1.1 watt; 10 pin 1.5 watt
- Typical TC: ±100 ppm°C

FEATURES:

- Low profile construction
- High reliability
- Alumina substrate
- Low cost automatic insertion and handling

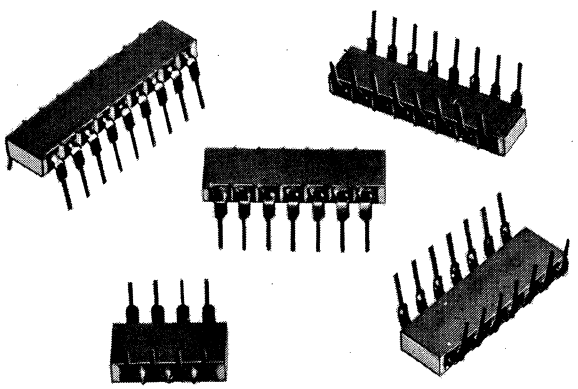
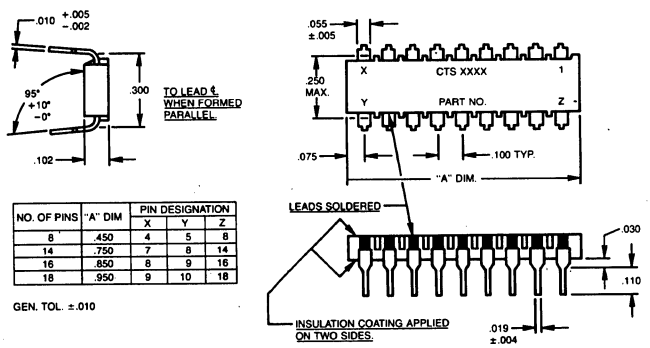
WORLD LEADER IN CERMET RESISTOR TECHNOLOGY

DUAL-IN-LINE CERMET RESISTOR NETWORKS

CERMET RESISTOR NETWORKS (Available with capacitor chips and/or active devices*)

CTS Series 760 Dual-In-Line cermet resistor networks are available in 8, 14, 16, and 18 lead styles. CTS now offers you a choice of four popular space-saver packages. All are designed to simplify automatic insertion along with IC's and other DIP products for reduced costs. Easy to hand mount, too. Available without cover coat, so you can trim for circuit balance in your own plant. Choose from standard circuits available off-the-shelf for immediate delivery or custom designed to your specifications.





NO. OF PINS	"A" DIM	PIN DESIGNATION X	Y	Z

14	.750	7	8	14
16	.850	8	9	16
18	.950	9	10	18

GEN. TOL. ±.010

Environmental Performance Characteristics

Test	Allowable Resistance Change CTS Max△ R	CTS Avg. △ R
Load Life: 1,000 hrs., 0.1 watt per resistor at 70°C	±0.50%	±0.20%
Moisture Resistance: 0.1 rated wattage at 70°C, 90-98% humidity, 1,000 hrs.	±0.50%	±0.20%
Insulation Resistance: Measured wet after moisture resistance test, 200 VDC	Greater than 1000 megohms	
Low Temperature Exposure: −63°C, 4 hrs.	±0.25%	±0.10%
Thermal Shock: 5 cycles, −63°C to +125°C, no load	±0.25%	±0.10%
Short Time Overload: 2.5 times rated voltage, 5 sec.	±0.25%	±0.05%
Terminal Strength: 5 lb. tensile & compression, 30 sec.	±0.25%	±0.03%
Effect of Soldering: 60/40 solder, 246°C, 2 sec.	±0.25%	±0.05%

FEATURES:

- Low height profile
- .100″ lead spacing
- High overload capabilities
- 8, 14, 16 & 18 pin constructions
- Compatible with automatic insertion equipment
- 2 watt power capabilities
- Reduced insertion time
- Available with capacitors and/or active devices*

ELECTRICAL AND MECHANICAL SPECIFICATIONS:

Description: 8, 14, 16, and 18 pin dual-in-line modules on .100″ lead centers.

Standard Resistance Range: 22Ω through 1 MegΩ.

Special Resistance Range: Below 22Ω and above 1 MegΩ.

Resistance Matching (2 like resistors):
50Ω to 30KΩ — 0.5%
30KΩ to 250KΩ — 1%
250KΩ to 3 MegΩ — 2.5%

Ratio Matching:
50Ω to 30KΩ — ±1%
30KΩ to 250KΩ — ±2%
250KΩ to 3 MegΩ — ±5%

Wattage Rating @ 70°C per module: 8 pin - .75 watt; 14 pin - 1.5 watts; 16 pin - 1.75 watts; 18 pin - 2.0 watts.

Standard Temperature Coefficient: ±300 ppm/°C.

Special Temperature Coefficient: to ±100 ppm/°C.

Temperature Coefficient Tracking: Available to 50 ppm/°C.

Standard Resistance Tolerance: ±5%.

Special Resistance Tolerance: ±1% or ½Ω (whichever is greater).

Substrate Material: Alumina.

Resistor Material: Cermet - thick film.

Insulation Coating: Organic - epoxy phenolic.

Lead Material: Solder coated copper.

Solder: 60/40 Tin/Lead.

Lead Strength: 5# pull.

* Active devices added by CTS Microelectronics, Inc., Lafayette, Indiana.

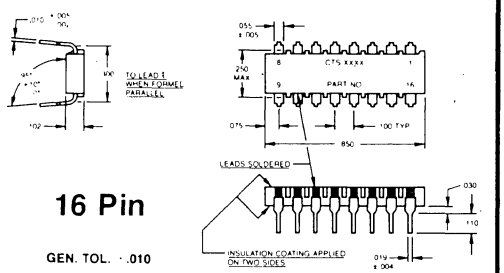
14 Pin

GEN. TOL. ± .010

FEATURES:

- **Low cost automatic insertion and handling**
- **High overload capabilities**
- **Low height profile**
- **Package compatibility with monolithic packages**
- **.100" lead spacing**



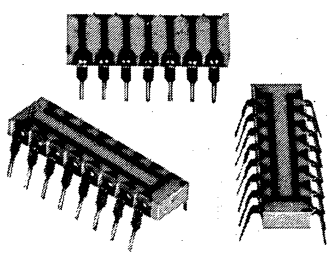
16 Pin

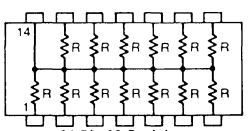
GEN. TOL. ± .010

CONDUCTOR MODULES

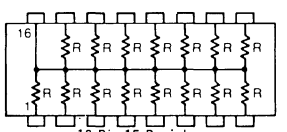
Eliminate time consuming installation of jumper wires.

Density of Jumpers:
Depending on number of pins, screened on both sides of substrate. Built to customer specifications and requirements.



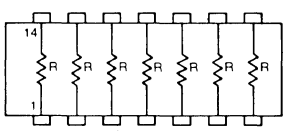


14 Pin-13 Resistors
Part Number 760-1-R+value

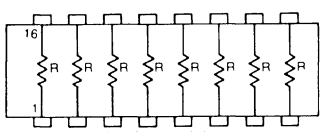


16 Pin-15 Resistors
Part Number 761-1-R+value

APPLICATIONS: MOS/ROM pull-up/pull-down; Open collector pull-up; "Wired OR" pull-up; Power driver pull-up; High speed parallel pull-up; TTL unused gate pull-up; TTL input pull-down; Digital pulse squaring.

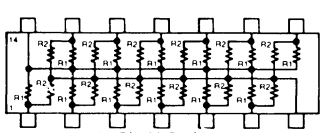


14 Pin-7 Resistors
Part Number 760-3-R+value

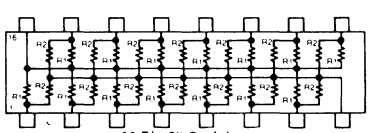


16 Pin-8 Resistors
Part Number 761-3-R+value

APPLICATIONS: "Wired OR" pull-up; Power driver pull-up; Power gate pull-up; Line termination; Long-line impedance balancing; LED current limiting; ECL output pull-down resistors; TTL input pull-down.



14 Pin-24 Resistors
Part Number 760-5-R+values



16 Pin-28 Resistors
Part Number 761-5-R+values

Resistance Values R1/R2	Part Numbers	
220Ω/270Ω	760-5-R220/270	761-5-R220/270
220Ω/330Ω	760-5-R220/330	761-5-R220/330
1.5K/3.3K	760-5-R1.5/3.3K	761-5-R1.5K/3.3K

Other combinations available upon request

Pulse Squaring TTL Terminators

CTS Terminator networks consist of two resistor pairs of the above value combinations. The resistors are connected together in series with a common line for power and a common line for ground. The junction of each pair is brought out to a separate terminal.

CTS OF BERNE, INC.

SUBSIDIARY OF CTS CORPORATION, ELKHART, INDIANA
WORLD LEADER IN CERMET RESISTOR TECHNOLOGY

SINGLE-IN-LINE CERMET RESISTOR NETWORKS

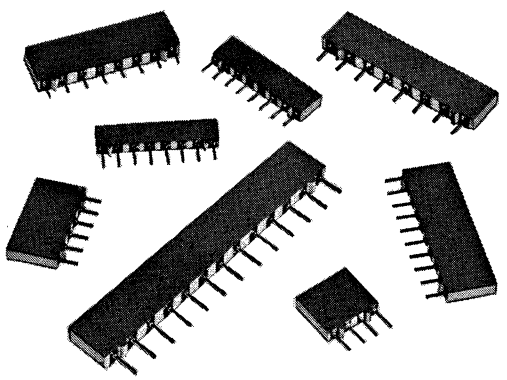
CERMET RESISTOR NETWORKS (Available with capacitor chips and/or active devices)*

CTS . . . Leader in the field of **Low Profile** space-saving Cermet Resistor Modules. Readily recognizable because of the familiar CTS Blue.

As is well illustrated, these modules have been specifically designed to save space.

So if you want to reduce the size of your design or add more complex circuitry without increasing size, CTS rates top consideration.

Most appealing is the fact that "The Little Blue Brick" is an extensive "Off The Shelf" item with CTS.



750 Series

FEATURES:

- Compact edge mount modules
- Ultra high stability and reliability
- Automatic insertion capabilities
- Reduced insertion time
- Fewer items to inventory
- Space savings over individual resistors
- Available with capacitors and/or active devices*
- Available with .100" and .125" lead centers

ELECTRICAL AND MECHANICAL SPECIFICATIONS:

Description: Cermet thick film single-in-line resistor networks.

Standard Resistance Range: 33Ω through 1 MegΩ.

Special Resistance Range: Below 33Ω and above 1 MegΩ.

Resistance Matching (2 like resistors):
50Ω to 30KΩ — 0.5%
30KΩ to 250KΩ — 1%
250KΩ to 3 MegΩ —2.5%

Ratio Matching:
50Ω to 30KΩ — ±1%
30KΩ to 250KΩ — ±2%
250KΩ to 3 MegΩ —±5%

Standard Temperature Coefficient: ±250 ppm/°C.

Special Temperature Coefficient: ±100 ppm/°C.

Temperature Coefficient Tracking: Available to 50 ppm/°C.

Standard Resistance Tolerance: ±5%.

Special Resistance Tolerance: to ±0.5% or ½Ω (whichever is greater

Substrate Material: Alumina.

Resistor Material: Cermet - thick film.

Insulation Coating: Organic - epoxy phenolic.

Lead Material: Solder coated copper.

Solder: 60/40 Tin/Lead.

Lead Strength: 5# pull.

Wattage Rating @ 70°C (see chart below).

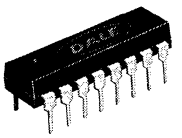
RESISTOR/CAPACITOR NETWORKS



FEATURES

- 14 and 16 pin DIP models
- 4 thru 12 pin SIP models
- Applications include AC coupling, line matching, line termination, bypassed pull-up, supply filtering, CKT bias and coupling.

GENERAL SPECIFICATIONS

	RESISTORS	*CAPACITORS		
		NPO	BX	X7R
Value Range (SIP)	10Ω - 3.3 meg	100pf - 4700pf	500pf - 0.1μf	500pf - 0.1μf
(DIP)	10Ω - 3.3 meg	100pf - 2700pf	500pf - 0.1μf	500pf - 0.1μf

Dissipation Factor (1 VRMS @ 1 KHZ)	N/A	0.1% max	2.5% max	3.0% max
Operating Temperature Range	−55°C to +125°C			

*Capacitors tested at 1 Vrms @ 1 KHZ @ 25°C

Dale R/C networks can be supplied with the same proven thick film circuit materials as those qualified to MIL-R-83401 and capacitors are available to EIA RS 198 or MIL-C-55681 specifications.

Combinations of capacitor characteristics NPO, BX and X7R dielectrics within the same package are possible with a wide range of resistance values.

DIMENSIONS: For reference, Dale R/C networks have the same basic dimensions as the Dale thick film networks listed elsewhere in this section.

SIP = Dale CSC coated styles
DIP = Dale MDP molded styles

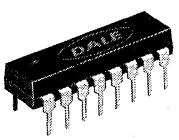
THIN FILM RESISTOR NETWORKS

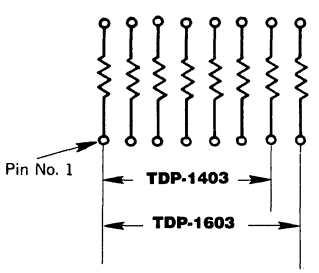
SERIES TDP: 14 and 16 pin DIP models



SPECIFICATIONS

Resistance Range: 100Ω to 100KΩ
Resistance Tolerance: 2%, 1%, .5%, .1%
Ratio Match: .05%, .1%, .5%
Resistance Temperature Coefficient: ±25 PPM/°C; ±10 PPM/°C available (−55°C to +125°C)
TC Tracking: ±5 PPM/°C (−55°C to +125°C)
Package Power Rating: .7 Watt/Package @ 25°C
Resistor Power Rating: .1 Watt/Resistor at 25°C
Voltage Coefficient of Resistance: <5 PPM/V typical
Maximum Operating Voltage: 100 VDC
Operating Temperature Range: −55°C to +125°C
Terminals: Solder Coated Copper Alloy
Body: Molded Epoxy
Resistive Material: Nichrome film

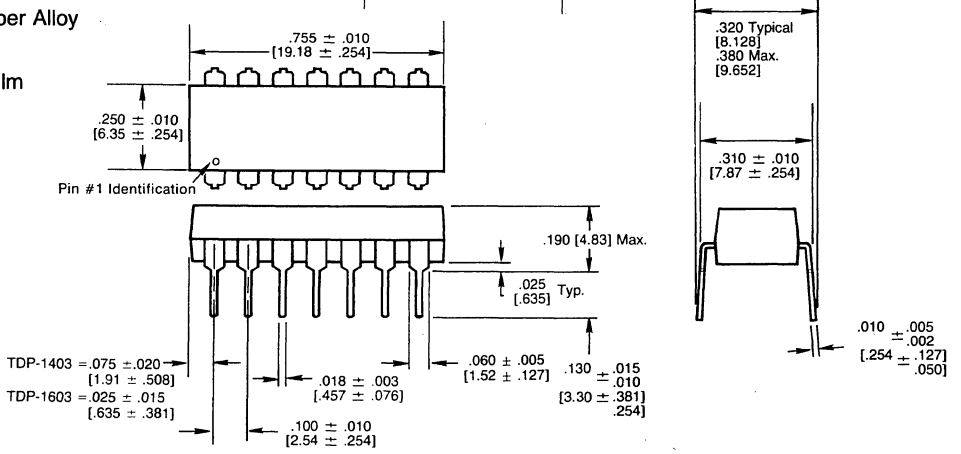
STANDARD SCHEMATICS



APPLICATIONS

- Precision voltage/current dividers
- Differential, instrumentation and summing amplifiers
- Converter ladder, scaling and range setting
- Oscillators and active filters

DIMENSIONS



NOTE:
Other Dale thin film products include thin film chips, including styles compatible with chip carrier and custom packages. Consult factory.

DALE®

DALE TYPE CCF-07 and CCF-55 METAL FILM RESISTORS

Coated, Commercial, 1%, 2% Tolerance

BULK PACK OR TAPE AND REEL PACKAGING

FEATURES

- 1/4 watt at 70°C power rating
- CCF-07 = 2% tolerance, CCF-55 = 1% tolerance
- 100 PPM/°C temperature coefficient
- Superior electrical performance. CCF-55 meets or exceeds MIL-R-22684 (RL07) and MIL-R-10509 (RN55D). CCF-07 meets electrical requirements of MIL-R-22684 (RL07)
- Flame retardant epoxy conformal coating
- Color band marking for ease of identification after mounting

SPECIFICATIONS

ELECTRICAL

Resistance Range: 10Ω to 1 Megohm

Resistance Tolerance: ±1% (CCF-55) ±2% (CCF-07)

Resistance Temperature Coefficient: ±100 PPM/°C (CCF-07 = −65°C to +150°C; CCF-55 = −65°C to +165°C)

Resistor Power Rating: 1/4 watt at +70°C

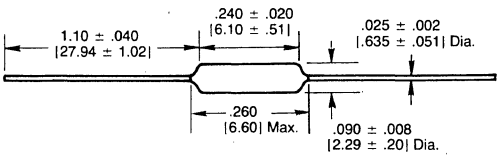
Maximum Working Voltage: 250 VRMS

Insulation Resistance: 10,000 Megohms

Operating Temperature Range: CCF-07 = −65°C to +150°C; CCF-55 = −65°C to +165°C

PHYSICAL CONFIGURATION

[Numbers in brackets indicate millimeters]



RESISTANCE VALUES

The **Dale CCF-07** is available in the standard 24 resistance values per decade. The **Dale CCF-55** is available in the standard 96 resistance values per decade. Values are obtained from the appropriate decade table by multiplying by powers of 10. Example: 24 = 24 ohms, 240 ohms, 2.4K, 24K or 240K.

CCF-07			CCF-55										
10	22	47	10.0	12.1	14.7	17.8	21.5	26.1	31.6	38.3	46.4	56.2	68.1	82.5

DALE®

DALE TYPE PTF COATED PRECISION THIN FILM

Low T.C.—Tight Tolerance

FEATURES

- Performance exceeds MIL-R-55182 requirements
- Extremely low temperature coefficients of resistance
- Very low noise and voltage coefficient
- Wide precision resistance range in small package
- 100% laser spiralled
- Very good high frequency characteristics
- Proprietary epoxy coating provides superior moisture protection
- Acceptance testing available
- Can replace wirewound bobbins

MATERIAL

Element: Precision deposited nickel-chrome alloy with controlled annealing

Core: Fire-cleaned high purity ceramic

Encapsulant: Specially formulated epoxy compounds. Coated construction.

Termination: Standard lead material is solder-coated copper. Solderable and weldable per MIL-STD-1276, Type C.

STANDARD ELECTRICAL SPECIFICATIONS

DALE TYPE	85°C RATING	MAX. WT. (Grams)	MAX. WORKING VOLTAGE	RESISTANCE RANGE

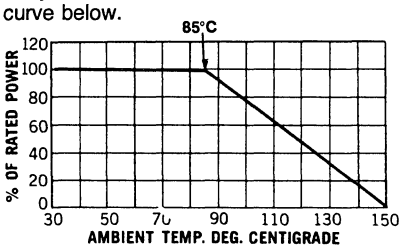
DERATING

Dale PTF resistors have an operating temperature range of −55°C to +150°C. They must be derated according to the curve below.



MATCHED SETS — NETWORKS

Dale's many years of experience in matching resistors for sets and networks, combined with the superb performance of the PTF product, provide the best and most economical solution to your precision resistor requirements. Why? Because most applications for precision resistors depend on two or more discretes having an initial tolerance ratio and a resistance tracking capability over temperature rather than each discrete resistor meeting the absolute requirements of the application.

Cost savings approaching 50% can be realized when relatively tight matching requirements are specified while permitting the absolute parameters of the discrete resistors to have more relaxed specifications.

Dale application engineers are available to assist you in specifying your requirements in the most economical way possible.

*Leads are OFHC tinned copper. FHV Series terminals are tinned brass (.020 x 0.10 x 0.250).

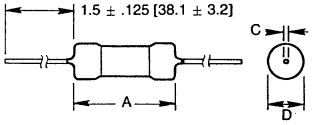
DALE® METAL ALLOY HIGH VOLTAGE RESISTORS

HVW, MVW and HVX SERIES

FEATURES

- HVW and MVW = Uncoated; HVX = Silicone coated
- HVW & MVW Ratings to 2.6W, 15KV, ±5%; HVX Ratings, to 5W, 15KV, ±5%
- Axial leads—HVW and HVX = tinned copper MVW = Copperweld

HVW/MVW Uncoated



HVX Coated

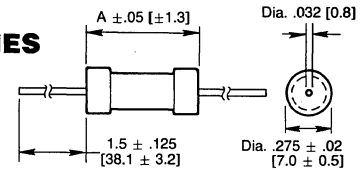
DALE® CARBON FILM HIGH VOLTAGE RESISTORS

Numbers in Brackets Indicate Millimeters

T SERIES



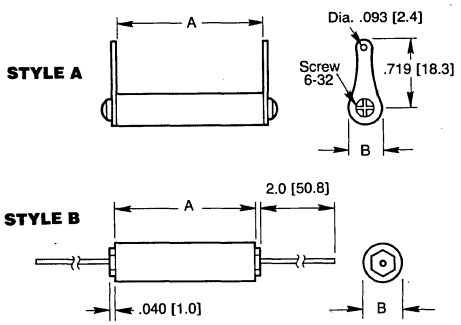
FEATURES

- Low cost, cap and lead type
- Ratings to 3W, 15KV, ±5%
- Supplied with mylar protective sleeve .002" [.05] thick

GENERAL PURPOSE TYPES (±5%, ±10%, ±15%, ±20%)

DALE TYPE	Power (watts) @ 25°C	Voltage Rating	RESISTANCE (Ohms) Min.	RESISTANCE (Ohms) Max.	DIMENSION A
TAEW	0.5	3.0KV	1M	1G	0.80 [20.3]
TAFW	1.0	5.0KV	1M	1G	1.05 [26.7]
TAKW	1.5	7.5KV	1M	1G	1.55 [39.4]
TAOW	2.0	10.0KV	1M	1G	2.05 [52.1]
TAQW	2.5	12.5KV	1M	1G	2.55 [64.8]
TARW	3.0	15.0KV	1M	1G	3.05 [77.5]

B, E, F, H SERIES*



FEATURES

- Single units to 10W, 40KV, ±3%
- Matched pairs (BP) to 20W, 80KV, ±1%
- Radial lug or axial lead
- Supplied with mylar protective sleeve .002" [.05] thick
- Series B is general purpose. Also available encapsulated (Series E); non-inductive, varnish coated (Series F); high megohm, varnish coated (Series H).

Style B axial leads are #20 AWG tinned copper. Dimensional tolerances are ±.016" [.4] or ±1%, whichever is greater.

GENERAL PURPOSE TYPES (±3%, ±5%, ±10%, ±15%)

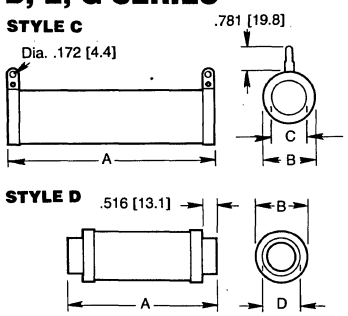
*(First letter of nomenclature is variable: B, E, F or H)

D, E, G SERIES*



FEATURES

- Ratings to 100W, 125KV, ±3%
- Radial bands or ferrule terminals
- Standard models varnish coated; vinyl protective sleeve available.
- Series D is general purpose. Also available encapsulated (Series E) or in non-inductive, varnish coated (Series G) styles.

Consult factory for complete information including other series to meet your needs.

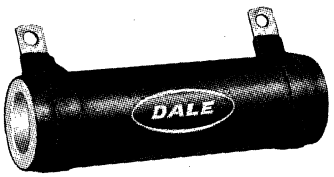
DALE® INDUSTRIAL POWER WIREWOUND RESISTORS

DALE TYPE HL, TUBULAR



For inexpensively dissipating larger amounts of power in DC or low frequency AC circuits.

Applications include:
- Grid resistor
- Voltage dropping resistor
- High voltage bleeder resistors in power supplies
- Bias supply resistor
- Voltage divider networks
- Filament dropping resistor
- Load resistor
- Shunt resistor

MEMCOR Components represent the cumulative design and production knowledge gained during 30 years experience in the industry.

Let MEMCOR sales engineers aid you with your special design and application requirements.

For price, quality, and delivery look to MEMCOR Components. Immediate delivery on stock value resistors. Typical 3-5 week delivery on other standard values and special requirements. These products are available from MEMCOR's Nationwide Authorized Distributor Network.

SUBSTRATES	METALLIZATION
Composition — 99.5% Al_2O_3 Surface — 3—4 microinches (Standard) Thickness — .010″ ±.002″ (Standard) ±.001″ (Special)	Resistive Material: Cr/Ni/X, 100—200Å (R.F. Sputtered) Conductor Base: Nickel — 5—8 μin. (R.F. Sputtered) Terminations: A. Gold — 100 μin. (Electroplated) B. Nickel & Solder (62/32/2) Microwave versions available.
Passivation: Optional, thermo-plastic recommended for solder applications.	

*When bonded to substrate, value dependent. **Center-tapped.

New Surface Mounted Resistor Networks

RATIO TOLERANCES TO 0.01%
ANY COMBINATION OF RESISTOR VALUES FROM 20Ω TO 250 KΩ

HERMETIC CHIP CARRIERS — standard JEDEC hermetic chip carries to full MIL STD 883B specifications. Available with from 16 to 64 terminals.

ECONO-CHIP* — Low-cost replacements, in non-military applications, for hermetic chip-carrier networks. Bonding pad locations are equivalent to configurations of standard JEDEC cariers.

* Patent Pending.

FLIP CHIPS — solder bumped; coated, multi-resistor substrates for face down attachment. Suitable for reflow soldering assembly. Low cost and fast production in custom networks.

VERSA-CHIP — New low-cost, surface-mounted packaging design for precision resistor networks. Provides pin-for-pin equivalency with chip carriers, and versatility for many alternate configurations. Laser-trimmable by customer after mounting.

Microwave Components

METALIZED PLATES — metalized on 1, 2 or 6 sides; as fired or polished substrates, in house laser hole drilling and contouring, through hole metalization. Metalizations — see metalized ceramic substrates.

MICROWAVE ATTENUATOR CHIPS — (3rd Quarter) attenuation of 1, 2, 3, 4, 5, 6, 8, 10, 16, and 20 dB; frequency to 18 GHz.

Other New Products

R.C. NETWORKS — Precision RC Networks are now available in standard SIP and DIP packages.

SILICON CHIP RESISTORS — (3rd Quarter) Standard and center-tapped chip resistors to compliment EFI's alumina-substrate chip resistors, Ta or NiCr, passivated.

GENERAL RESISTANCE

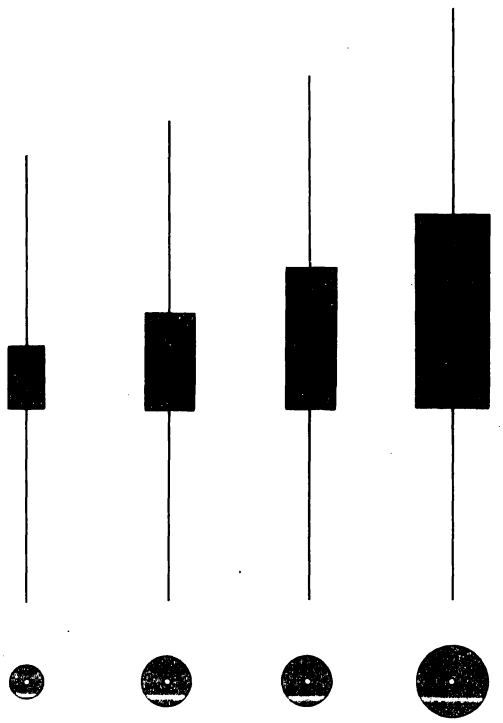
COMPONENTS WITH BUILT-IN PRECISION

PRECISION WIREWOUND RESISTORS

For thirty years we have been deeply involved in the refinement and manufacture of precision wirewound resistors meeting the exacting requirements of military specifications such as MIL-R-93/MIL-R-39005 (RB & RBR styles).

Many form factors are available, including axial and PC mounting types, in resistance values and accuracies to fill most requirements. "Standard" values and accuracies in our more popular types are usually available from stock. Orders for extremely large quantities and non-standard values are put on-line for prompt delivery.

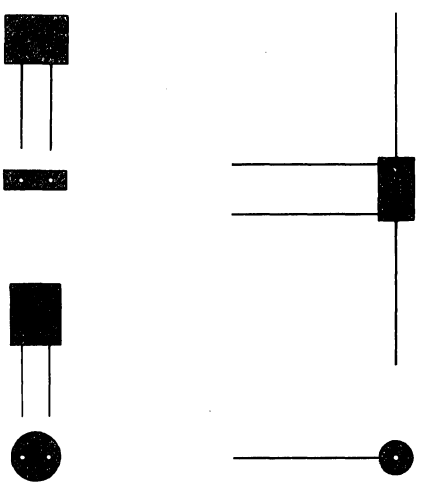
Standard accuracies are ±0.01%, ±0.025%, and ±0.1%. Stability on most styles is ±35ppm/year; maximum temperature coefficient is ±5ppm/°C, with lower values available.



CUSTOM COMPONENTS

We supply a number of unusual needs, such as 4-terminal current-sensing resistors, non-flammable fuse resistors, and sets critically matched for value, accuracy, temperature coefficient, and other pertinent parameters.

We design and manufacture custom active and passive networks to meet your requirements, simple or complex. A few examples are thermocouple reference junction simulators, voltage/current reference modules, ladder networks/voltage dividers.



BE PRECISE.

STANDARD & CUSTOM PRECISION, THIN-FILM, RESISTOR NETWORKS

CUSTOM RESISTOR NETWORKS A SPECIALTY...

During 13 years as a major supplier of precision resistor networks, HyComp has amassed a library of more than 200 different custom designs. Like our standard products, these are available free of any non-recurring engineering charge.

HyComp's custom-designed Nichrome thin-film resistor networks bring convenient and cost-effective solutions to the space-limited circuit designer requiring special resistor configuration, high precision, close tolerances and/or excellent stability over temperature and time. Fast turnaround and sensible pricing, recommend this approach for appropriate applications.

You should consider a custom thin-film network if your application includes any of the following requirements:

- Down to 0.006% ratio tolerance between specified resistors
- Down to ±0.5ppm/°C ratio tracking (TCRT)
- Down to ±0.5% absolute tolerance
- Down to ±10ppm/°C absolute temperature coefficient (TCR)
- Excellent long term stability and reliability over the −55°C to +125°C MIL temperature range.

For further information or assistance please contact HyComp directly.

STANDARD PRECISION THIN-FILM RESISTOR NETWORKS

Let Hycomp's broad selection of standard thin-film precision resistor networks reduce the cost and size of your product. Encased in your choice of hermetic or non-hermetic Flatpack, SIP, DIP, TO-9 and LCC packages, our standard networks support a wide variety of demanding applications requiring precision attenuation, gain-setting, and impedance matching or weighting.

Reliability? You bet! MIL-STD-883B processing is routine at HyComp. And to keep your costs down, we also build dependable non-MIL networks to our own exacting reliability standards. HyComp designs and builds reliable products. It's the only way we know.

JULIE RESEARCH LABORATORIES INCORPORATED

PRECISION WIREWOUND RESISTORS

PRECISION RESISTORS FOR EVERY APPLICATION

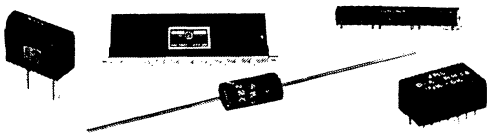
Precision Resistors for every application imaginable; high quality, low priced precision resistors are available for your every design need and at delivery schedules (1-2 weeks) even distributors can't beat!! JULIE RESEARCH resistors are guaranteed for a lifetime performance in almost every value, tolerance and stability.

Available as individual, ratio or network assemblies, these expertly manufactured and trimmed resistors assist you in eliminating countless hours of Production Test time from your design. In addition, the use of these very stable resistors contribute to reliable design and reduced component count. Specify a Julie Resistor. Better yet, call us and we will assist in helping you get the best price-performance unit your application and budget will allow.

JUST A FEW OF THE PROVEN APPLICATIONS FOR THESE LOW REACTANCE HIGH PERFORMANCE RESISTORS ARE:

- Transducer Calibrating Networks
- Current Metering
- Gyro Torquing
- AC and DC Precision Bridge Elements
- Amplifier Summing Elements
- D/A Converters
- Reference Divider
- Precision Multiplier
- Resistive Divider Networks
- Shunting
- AC or DC Ratio
- High Performance MIL Spec
- Zener Trimming Networks

RESISTOR STYLES



SPECIFICATIONS

The DIP resistor is available with up to 7 resistance values in a 14 pin DIP or 8 resistance values in a 16 pin DIP.
Range: 100Ω to 100 KΩ per resistor.
Ratio Accuracy: To .001% for ratio 1:1.
Stability: Network .002% for standard ranges.
Temperature Coefficient: 1 ppm/°C to 20 ppm/°C.
Delivery: 3-4 weeks.
Custom designs available — contact factory with your specific applications.

SPECIFICATIONS

Range: Individual Resistors, 0.1 ohm to 5 megohms. Ratio Sets, 1:1 to 10^6:1 depending on total resistance required.
Accuracy: Standard accuracy of resistors, 0.005% for values from 1000 ohms to 5 megohm. Standard accuracy of ratio sets, 0.0025% for ratios near 1:1. Accuracies from 0.002% to 0.1% are available (at corresponding prices) on special order.
Stability: Resistors, 0.002% per year for standard ranges.
Accuracy Over Military Temperature Range: ±0.02% from −45°C to +85°C.
Matching Over Military Temperature Range: ±0.005% from −45°C to +85°C.
Retrace Over Military Environmental Conditions: 0.002%.
Temperature Coefficient: Resistors, 5 ppm/°C standard. (Available as low as 1.0 ppm/°C). Ratio sets, 2.5 ppm/°C standard. (Available as low as 0.7 ppm/°C).
Note: Temperature Coefficient can be altered, in manufacture, over wide ranges.
Thermal Transients: All thermal-induced transient effects, e.g.: self-heating, Seebeck and Peltier effects, are less than 0.0015% at rated power dissipation. Self-heating and time constants of thermal transients are reduced to 10% of normal values in air.
Current Capability: To 2 amperes.
Voltage: Between Terminals, 300 volts maximum, Terminals to Case, 500 volts maximum.

SPECIFICATIONS

Range: Individual Resistors, 1 ohm to 100 ohms.
Accuracy: Standard accuracy of resistors, 0.01%, for values from 1.0 ohm to 100 ohms. (R_1xG) .005% (CH).
Stability: Resistors 0.003% per year for standard ranges.
Accuracy Over Military Temperature Range: 0.02% fom −30°C to +85°C.
Retrace Over Military Environmental Conditions: 0.003%.
Temperature Coefficient: Resistors, 5 ppm/°C standard, (available as low as 2.5 ppm/°C).
Note: Temperature Coefficient can be altered, in manufacture, over wide ranges.
Voltage and Power Ratings: See chart.
Construction: See charts.
Group Encapsulation: Special techniquies permit group encapsulation of high-accuracy units on a high-yield basis, enabling better accuracies at competitive costs. (See JRL Bulletin B-11.)

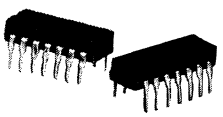
RESISTOR PRODUCTS

THICK AND THIN FILM

DIP RESISTOR NETWORKS



Thick film epoxy molded DIP resistor networks are available in both Commercial and M-83401 Mil-approved configurations. 14 and 16 Pin, A and B Schematics in standard resistance values are available from stock. Custom designed circuits for your unique requirements are a specialty.

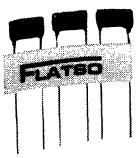
WRITE FOR BULLETIN MD 2/80
WRITE FOR BULLETIN PD 1/80

THICK FILM CAPACITOR ARRAYS

Thick Film Capacitor Arrays offer considerable cost advantages and reliability improvements for multiple capacitor circuits. The standard capacitance range is 10 pf to 200 pf. These circuits are available in virtually any customer required configurations. The capacitor elements exhibit NPO - type characteristics. Tolerances to 5% and voltage rating to 200 volts are available. Capacitors on a substrate may be matched to 2.5% on request. Dissipation factor is typically 1% and insulation resistance is greater than 10^{11} ohms.

WRITE FOR BULLETIN CA 3/82

FLATSO



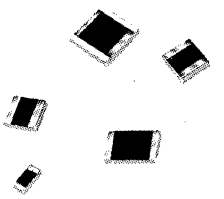
KDI Pyrofilm offers seven "FLATSO" resistors with voltage ratings to 20 KV and power ratings from .25 watts to 5 watts. Resistance values from 50Ω to 5,000 Meg and temperature coefficients to ±100 PPM/°C are available depending on value. Custom Flatso Networks and non-standard values will be quoted upon request.

WRITE FOR BULLETIN FL1-80

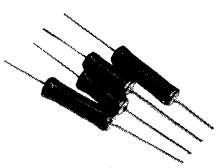
THICK FILM CHIP RESISTORS

A complete line of Thick Film Chip Resistors are available in eight sizes. These chips feature both single-sided and wrap-around terminations. They are available with platinum gold, gold, and solder coated terminations. The resistance range is from 5.1 ohms to 4 megohms. Tolerances from 1% to 20% are standard as are temperature coefficients from 100 PPM/°C to 250 PPM/°C. Power capabilities range from 50 mW to 0.5 Watts. These chip resistors offer high rel design and construction and environmental testing is available.

WRITE FOR BULLETIN PC 10/81



HIGH VOLTAGE



Axial lead thick film resistors for both high voltage and high resistance can be supplied in voltage ratings to 40 KV and resistance values to 1,000 Meg. Fired at over 900°C, these resistors are unmatched in performance with proven load life stability.

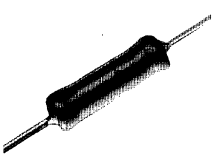
WRITE FOR BULLETIN PVC 2/80

HIGH VOLTAGE THICK FILM NETWORKS

Voltage dividers and other networks are available with ratings up to 60 KV. Divider Networks have tolerances to 1% with TC tracking to 25 PPM/°C. They can be manufactured with a resistance range from 10 ohm to 1,000 megohm. These networks are available in leaded and unleaded styles, in both standard and custom configurations.

WRITE FOR BULLETIN #FN 3/80

METAL FILM



Conformal coated high precision metal film resistors offer superior stability and reliability at a reasonable cost. Features include: small size, impervious to moisture, low noise, low T.C. and resistance range of 10 ohms to 70 Megohms. Surpasses MIL-R-10509 and MIL-R-55182. In-plant testing facilities as well as matched networks are available. Standard T.C.: ±10, ±25, ±50, and ±100 ppm/°C.

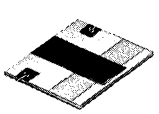
WRITE FOR BULLETIN #PME 2-80

THICK FILM RESISTOR CAPACITOR NETWORKS

Custom Resistor and Resistor Capacitor Networks can be supplied to virtually any customer requirement. The resistance range is from 10 ohms to 10 megohms with absolute tolerances to 0.5%, and ratios to 0.1%. Temperature coefficient of 100 PPM/°C is available. The capacitance range is determined by the type of dielectric material chosen. RC Time Constant Calibration is available to 0.5%. Complete environmental testing can be performed.

WRITE FOR BULLETIN RC 2/82

CHIP ATTENUATORS



Measuring only .125 × .150 inches, the Pyrofilm micro-thin deposited chip attenuators offer the engineer complete flexibility in his circuit design. They are laser trimmed to values from 2 thru 20 db assuring correlation from chip to chip. The thin metal film is evaporated on alumina substrate and is available with either single surface or wrap-around terminals that are silver-plated over nickel. Operating from DC to 12.4 GHz, they exhibit a maximum VSWR of 1.5:1 at the extreme band edge.

WRITE FOR BULLETIN PCA-981

THIN FILM CHIP RESISTORS

PMC's - Low powers up to 150 mW
PPC's - High powers up to 1,000 Watts
Resistance Values - 10-500 ohms

Chip resistors are available in various sizes and may be used directly in a microstrip transmission line circuit or as a building block for other requirements, such as terminations and power dividers. The smaller chips may be used at a higher frequency due to their lower shunt capacitance. Large chips, which are higher power, are frequency limited due to their higher capacitance.

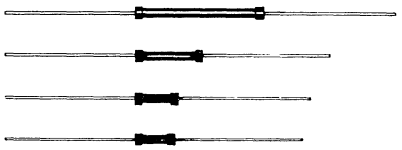
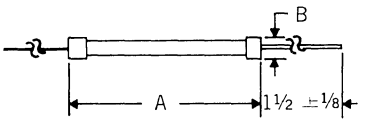
HIGH VOLTAGE
- PRECISION RESISTORS
- DIODE ARRAY

SERIES I RESISTORS
PRECISION HIGH OHMAGE HIGH VOLTAGE RESISTORS



FEATURES
- Tinned copper leads .020″ or .032″ standard. Other lead materials available
- Conformal epoxy coated
- Glass overglaze for vacuum applications



NOTES
- Voltage coefficient is dependent on resistance value. Typically less than 5 PPM/V in mid resistance values
- Burn in and other preconditioning options available
- Tolerance to ½% on request

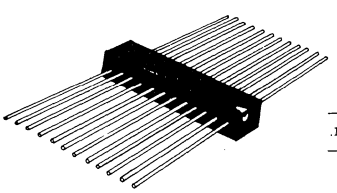
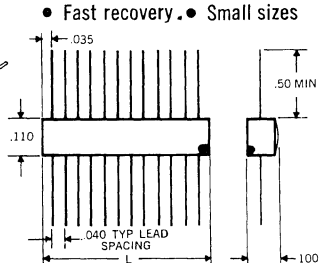
MINIATURE HIGH VOLTAGE DIODE ARRAY

FEATURES
- Low reverse leakage current
- Fast recovery
- Small sizes





MECHANICAL
- Lead Diameter .015 max
- Lead Material—Silver
- Encapsulant—Epoxy

APPLICATIONS
- Typical applications are power supplies which generate the high voltage required for image intensifiers photomultipliers and CRTS.

KELVIN

Precision Wire-wound Resistors, Power Resistors & Resistor Networks

Kelvin is a pioneer in the field of very high stability, close tolerance, precision wire-wound resistors. Resistors shown represent only part of the broad Kelvin line. Complete catalog data is available on request.

HIGH RELIABILITY "HRL" SERIES

Kelvin's "HRL" Series was generated after years of experience on the Polaris, Gemini, Apollo and other important high reliability missile and space programs. Kelvin has combined the many and varied parameters of these programs into a single resistor series, designed to meet the stringent high reliability requirements of many of today's military and commercial systems.

Kelvin's reliability goal, through the design and controls of the "HRL" Series resistor and the use of acceptance inspection procedures, was to produce precision wire-wound resistors having failure rates better than .0005%/1000 hours at a 90% confidence level. Present level is .00064%/1000 hours at a 60% confidence level.

All "HRL" resistors have a documented history. This includes traceability from the spool analysis of the resistance wire, through each phase of the production operation to the finished product. Each resistor is screened to eliminate INFANT MORTALITY. This consists of a 100 hour burn in at full rated power at 125°C and a short time overload at twice the rated power. Other tests are conducted as outlined in Bulletin HR 02449, which presents the complete procedure and methods approach for production of "HRL" resistors.

CATALOG #763 COVERS ALL PRODUCTS SHOWN ON THIS PAGE

KELVIN 5919 NOBLE AVENUE, VAN NUYS, CALIFORNIA 91411 TELEPHONE (213) 782-6662

FAST RISE TIME APPLICATIONS

"RT" style resistors provide exceptionally high frequency performance, in addition to the other recognized advantages of wire-wound resistors. "RT" resistors can be supplied with rise times as low as 25 nanoseconds (from 10% to 90% of peak pulse amplitude at 100 KC), depending on resistance values and physical configurations. See Catalog #763

TOLERANCES: 1% through .005% available on most types and resistance values.

TEMPERATURE COEFFICIENT: ±20 ppm/°C standard.

T.C.s available to 1 ppm depending on size, value and temperature range.

WINDINGS: Non-inductive.

*WATTAGE RATINGS: Based on a maximum ambient temperature of 125°C, derated to zero watts at +145°C.

**RESISTANCE MAX.: Contact factory for availability of values above maximum shown.

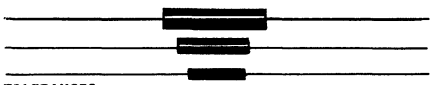
SERIES KM MOLDED, POWER RESISTORS



Series KM are general purpose, reliable power resistors designed to be used where heat sinks are not available or not desired. These resistors are extremely stable for their size as compared to film types. Series KM are considered to have the lowest dollar per watt cost of precision resistors. Send for Bulletin K-1.

TOLERANCES:

KM025, KM050, KM100—.1% thru 5%
KM200 thru KM1000—.05% thru 5%

TEMPERATURE COEFFICIENT:
(Per Degree Centigrade)

±20 PPM (170 ohms and above)
±30 PPM (10 to 170 ohms)
±50 PPM (1 to 9.99 ohms)
Below one ohm—contact factory

T.C.s to 5 PPM/°C available depending on size and value.

NON-INDUCTIVE STYLES: Reduce resistance values by approximately 50%; derate maximum working voltage by 30%. Add "N" to part number. Example: KMN025.

KELVIN PART NUMBER	WATTAGE @ 25° C	DC Working Voltage	Maximum Resistance	SIZE and TOLERANCES Length	Diameter	Lead Length (±0.125)	Lead Diameter (AWG)	Equivalent Military Styles MIL-R-26E

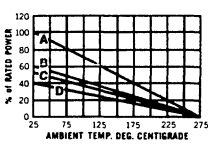
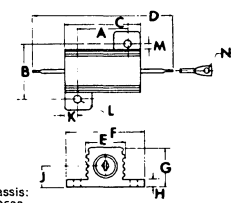
SERIES KC CHASSIS MOUNT POWER RESISTORS

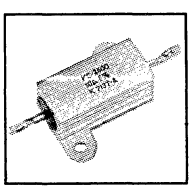
DERATING CURVES

Derating is required for reduced chassis mounting area and high ambient temperatures.

Curves:







A — When mounted on proper aluminum chassis:
48 sq. inches 0.040 aluminum for KC500 and KC1000
70 sq. inches 0.040 aluminum for KC2500
144 sq. inches 0.040 aluminum for KC5000

B — Unmounted KC500 and KC1000
C — Unmounted KC2500
D — Unmounted KC5000

Designed to provide maximum heat dissipation through heat sink and finned case configuration. Ideally suited where large amounts of power must be dissipated and small size is important. Capable of maintaining their precision tolerance in wattage ratings up to 50 watts. Send for Bulletin K-3.

TOLERANCES: 0.05% through 5.0%.

TEMPERATURE COEFFICIENT:
(Per Degree Centigrade)

TC	KC500	KC1000	KC2500	KC5000

SERIES KM-4T & KC-4T POWER RESISTORS

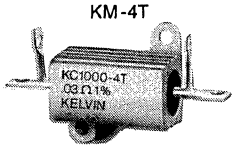
GENERAL FEATURES

TOLERANCES:	1% through 10%
RESISTANCE RANGE:	.001 ohms and up
TEMPERATURE COEFFICIENT:	.1Ω to 1Ω ±90 PPM/°C .05Ω to <.1Ω ± 150 PPM/°C Below .05 ohm—Check Factory
TEMPERATURE RANGE:	−55°C to +275°C
DIELECTRIC STRENGTH:	1000 VRMS all styles except KC5000-4T at 2500 VRMS
LEADS:	Tinned copperweld

See KM & KC Series this page for additional specifications.

KELVIN FOUR TERMINAL POWER RESISTORS provide low resistance and close tolerance capabilities to users who require accurate measurements in tightly designed circuits. The two voltage (sense) leads will yield a very precise measurement at the points where they join the current leads. Lead resistance, which plays a predominant role in low ohm resistors, is virtually eliminated.

KM-4T



KELVIN PART NUMBER	WATTAGE RATING	DC WORKING VOLTAGE	MINIMUM RESISTANCE IN OHMS 10%	5%	3%	1%

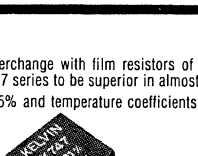
K747 WIREWOUND RESISTOR

Lead Size:	#22 (.025) solder-coated brass
Lead Spacing ℄ to ℄:	.150" (±.010)
Wattage:	.3 watts
Voltage:	200 volts
Resistance Range:	.5Ω to 375K
Resistance Tolerance:	1% thru .01%
Temperature Coefficient:	±5 PPM standard (0–85°C)
TC Tracking:	±3PPM/°C Typical—Available to ±1PPM/°C (Value dependent)
Stability:	25PPM/year
Rise Time:	25 nanoseconds (value dependent)
Noise:	Not measureable on commercially available equipment
Environmental:	Exceeds all requirements of MIL-R-39005

Designed specifically to interchange with film resistors of same physical configuration. Performance characteristics show the K747 series to be superior in almost all instances. Send for Bulletin K747.

For closer tolerances to .005% and temperature coefficients to 1 PPM (0 to 60°C referenced to 25°C), request Bulletin K746.



SIZE: .320±.020 H,
.295±.010 L,
.100±.015 W.
Or .100±.010W (specify K746)

Kelvin pioneered the close tolerance, close temperature coefficient and excellent long term stability wire-wound resistor. State-of-the-art manufacturing techniques and superior testing capabilities yield the ultimate in quality at a competitive price. Please contact your nearest Kelvin representative or the factory direct for further details.

KELVIN 5919 NOBLE AVENUE, VAN NUYS, CALIFORNIA 91411 (213) 782-6662, TELEX: 651417

KELVIN

Precision Wire-wound Resistors, Power Resistors & Resistor Networks

Kelvin is a pioneer in the field of very high stability, close tolerance, precision wire-wound resistors. Resistors shown represent only part of the broad Kelvin line. Complete catalog data is available on request.

Series G HERMETICALLY SEALED RESISTORS

DESCRIPTION

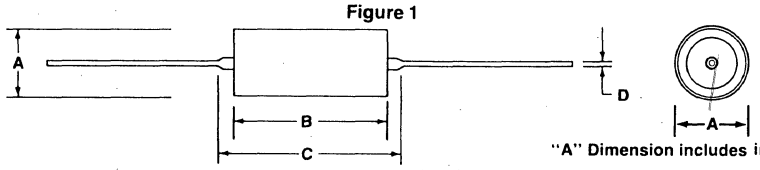
- The Kelvin "G" Series are true hermetically sealed resistors where the resistive element is contained in its own stable environment within an insulated, non-magnetic metal shell with Kovar glass-to-metal end seals.
- By providing a true hermetic seal, plus closely controlled production techniques, guaranteed shelf life stabilities of less than 5 PPM per year are now made commercially available. Stability plots conducted over an extended period show deviations of less than 5PPM after the first year and 10PPM over a three year period.
- In order to achieve these high accuracies of stability, special handling in a controlled environment and attention to finite Engineering, Production and Quality details is a prerequisite.
- Kelvin has developed special winding techniques wherein repeatability of winding tension from lot to lot is controllable within a finite degree. This repeatability of tension results in consistency of stability and temperature coefficient. For example: TC's of 1PPM are available (value dependent) from 0°C to 85°C referenced to 25°C.

ELECTRICAL SPECIFICATIONS: "G" SERIES

1. Resistance Range: See Table 1
2. Standard Resistance Tolerances: 0.1% to .0025%*
3. Resistance Ratios: To .001%*
4. Temperature Coefficient: ±5PPM/°C from −55°C to +125°C Available to ±1PPM* 0 to 85°C TC's referenced to 25°C
5. Stability: (Storage Life) 5PPM/Year 10PPM/3 Years
6. Environmental: Conforms to MIL-R-39005
7. Wattage: See Table 1
8. Maximum Voltage: See Table 1
9. Mechanical Dimensions: See Table 1
10. Leads: Solderable, 1½ inch minimum length. See Table 1

*Value Dependent

Figure 1



"A" Dimension includes insulating sleeve.

SPECIFICATIONS

TOLERANCE: 5%, 1% closer tolerances available to .05%
WATTAGE: 1 Watt to 13 Watts
STANDARD RESISTANCE VALUES: From .1 Ω to maximum values as stated in table. Values as low as .001 Ω and 4 terminal construction available
COATING: Special silicone coating withstands moisture, salt water immersion and cleaning solvents. It will withstand operation from −65°C up to 400°C
LEADS: Tinned copperweld. Length 1.25″ minimum
TEMPERATURE COEFFICIENT: ±20 ppm/°C 500 Ω up
CONSTRUCTION: Welded Terminations
ADDITIONAL FEATURES: Non inductive windings. Other sizes and wattages. Special Temperature Coefficients up to +6000 ppm/°C

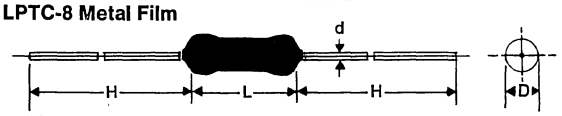
HIGH STABILITY LINEAR POSITIVE T.C. RESISTORS

Type LPTC-8 Metal Film



Rating & Dimensions: (in inches)

Max. Power Rating @ 70°C	L ±.020	D ±.020	1	d
⅛ W	.250	.090	1.0	22 ga.

Resistance Range: 10 ohm — 20K ohm (T1 and T2)
10 ohm — 1K ohm (T3 and T4)
Resistance Tolerance: ±2% (G) and ±5% (J)
Resistance Temperature Coefficient: T1 (±2500 PPM)
T2 (±3000 PPM)
T3 (±3500 PPM)
T4 (±4000 PPM)
Features: a) Linear resistance change vs. temperature, which cannot be obtained in a semiconductor or thermister.
b) Positive temperature coefficient
Application: Temperature compensation, temperature indication, temperature control, temperature protection and liquid level detection.
Markings: First two bands are significant digits, third band the multiplier, and the fourth and fifth bands are first two digits of T.C.R.

SPECIFICATIONS FOR MG SERIES METAL GLAZE RESISTORS

This high resistance component has been developed to be used as a precision or power resistor for X-ray equipment, measuring equipment and statistic electric equipment. It has high reliability in its shelf life, T.C.R. and other characteristics.

CHARACTERISTICS:
T.C.R.: 100 PPM
Load life: 3000 Hrs. ±1%
Anti moisture load life: ±1% after 250 Hrs. at 40°C 90-95% RH
Voltage coefficient: 0.00002 — 0.0005% /V
Shelf life: ±1% after 10,000 Hrs. at room temp.
Max. Temperature: 220°C
Temperature range: −55°C — +165°C

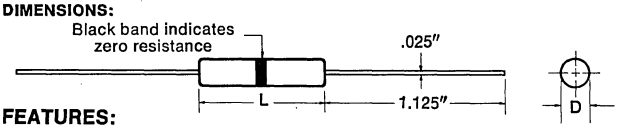
Non-Combustibility		The resistor shall withstand Overload test in accordance with Article UL492, 213 without producing a fire hazard.		
Resistance to Solvents		The resistor shall withstand Solvents test in accordance with Article MIL-STD-202 E 215 without producing any mechanical or electrical damage.		

JUMPER WIRE ZERO OHM RESISTORS

Type 104, 106, 108

DIMENSIONS:



FEATURES:

- Sizes equal to ⅛, ¼ and ½W carbon film
- Economical
- Straight-through zero ohm continuity
- Conformal multilayer epoxy coating
- Welded cap and lead construction
- Packing: Tape & reeled or bulk

Type	Equivalent Wattage	Body Inch Length (L) ±.010	Body Inch Diameter (D) ±.005
104	⅛	.150	.080
106	¼	.245	.085
108	½	.500	.095

SPECIFICATIONS:

Maximum Resistance: 0.0025 ohm
Lead Material: Leads are copperclad steel with 30/70 solder coatings to allow both welding and soldering operations.
Body material: Epoxy coated metal body
Minimum Insulation Resistance: Dry, 10,000 megohm; Wet, 100 megohm
Minimum Dielectric Withstanding Voltage: Atmospheric, 500V RMS; Reduced, 325V RMS
Insulation Flammability: Resistor insulation is self extinguishing within 10 seconds after externally applied flame is removed.
Current Rating: 25 amps at 25°C, derating to 0 amps at 150°C
Reel Capacity: 5000 pcs

APPLICATIONS

Jumper wires or crossovers, as they are sometimes called, are basically interconnection devices between points on a PC board.
Generally they are used for the following reasons:

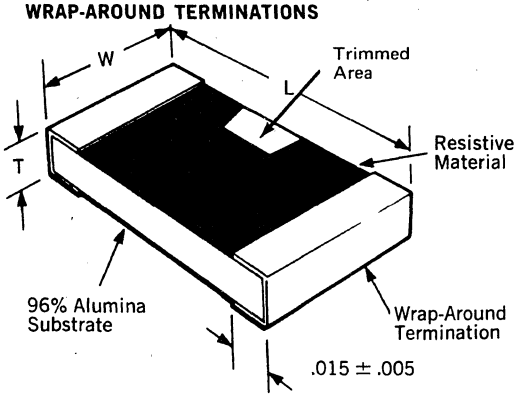
- Inability to connect two points on a PC board due to other circuit paths which must be crossed over.
- An after-the-fact design change that requires new point connections.
- Circuit tuning by changing point connections.

CHIP RESISTORS (THICK FILM)

FEATURES

- Eliminates expensive multiple screenings
- Provides very low to very hgh resistance values (trimmed to your specific order)
- Wrap-around terminations provide assembly ease and reliability
- Allows high density packaging
- Offers uniform tolerances — to 1%
- Can be wave-soldered directly to the back of a P.C. board
- Can be color-coded for identification
- High reliability-manufactured to meet MIL-R-55342C standards (see chart)
- High purity alumina substrate
- Precision performance-resulting from tight TCR, close tracking and excellent environmental performance
- Backside metalization available on request.

WRAP-AROUND TERMINATIONS



- Technical information and samples available without obligation.

• Wattages shown in parenthesis are Navy ratings per Mil-R-15109.
† Resistors shown are standard wattages
*Add "A" after part number for adjustable types.
†For resistance values outside the limits shown, consult M.R.C.
‡ Cement coating standard — Silicone available.
• Unable to find what you need above? The same cores can be wound with ribbon wire for higher wattage capability

M.R.C. can build a resistor to your specifications on any of the basic cores shown here. (If these do not suit your need, contact M.R.C. for engineering assistance, as 32 additional cores are also available.)

When contemplating a custom resistor, consider the following options to meet your exact requirement(s):

- **SPECIAL APPLICATIONS**
- **SIZE LIMITATIONS**
- **MIL–R–15109**

SPECIAL TOLERANCE–
- Resistance tolerance to ±1% can be manufactured in many cases.

SPECIAL COATINGS–
- Silicone
- Cement
- Sand & Cement

SPECIAL TAPS–
- Taps can be provided to your specifications.

SPECIAL T.C.–
- Temperature coefficient to 20 ppm/°C.

SPECIAL WINDINGS–
- Ayrton-Perry (Non-inductive, round wire only)
- Bilfilar (Non-inductive)

SPECIAL TERMINALS–
- Single and double ¼" quick-connect
- Metal sleeve ferrule
- Live-bracket

HARDWARE–
- Terminal hardware
- L–Bracket mounting
- Spring clip mounting
- Vertical mounting hardware

LOAD BANKS–
- M.R.C. will custom design and build load banks to your requirements.

Vitreous Enamel Ribwound Resistors

APPLICATIONS

Particularly useful where high energy is to be dissipated in the lower ohmic ranges. Due to its ability to operate at higher temperatures and dissipate greater heat, the ribwound resistor is almost one-half the physical size of the equivalently rated round-wire style resistor. Ribwound wattage ratings are based on a temperature rise of 375°C above an ambient of 40°C. They may be mounted with spring clips (thru 1 1/8" dia.); thrubolt mounting hardware, individual or multiple-stacked bracket assemblies or live-bracket mountings.

BASIC CONSTRUCTION

Crimped ribbon resistance wire is edge-wound and then locked to the ceramic core with vitreous enamel. Resistance wire is spot-welded to the terminal bands. Ribwound resistors can be furnished in fixed, adjustable, or tapped styles and are also available with cement coating.

OHMS	OHMS	OHMS
0.1	1.0	6.0
0.15	1.25	8.0
0.2	1.5	10.0
0.25	2.0	12.0
0.4	2.5	15.0
0.5	3.0	20.0
0.6	4.0	25.0
0.75	5.0	33.0

Many 300 watt units are stocked in both fixed and adjustable styles. Listed are the more popular 300 watt ohmic values. All other wattage ratings and styles are made to order.

HI–OHM RIBS
Exclusively from M.R.C.

You may note on the adjacent chart that maximum ohmic values shown for each wattage are three or more times that normally available.

This development is the result of the installation of precision rib winding machines designed and manufactured by M.R.C.

Unique in the industry, these precision machines produce a winding with extreme uniformity, as close inspection of M.R.C. ribwound resistors will reveal. The uniform winding allows turns to be applied much closer to each other and consequently significantly higher resistances are achieved.

This means that lower ohmic value round wire power resistors may feasibly be replaced by HI–OHM RIBS with a significant saving in size. (For a given wattage rating, ribwounds are considerably smaller physically.)

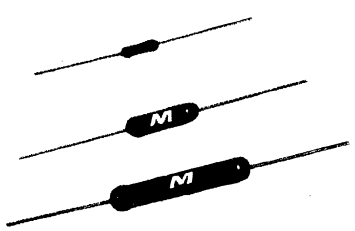
Axials



APPLICATIONS
- Electronic Circuitry
- Printed Circuits
- Radio, Television and Sound Reproduction
- Miniature Controls

FEATURES
- Rugged yet small.
- Highly stable.
- Matched expansion in core caps and coating for temperature stability.
- Standard 5% tolerance over 1 ohm, available in close tolerances on request.
- Wattage ratings based on 325°C rise at 25°C ambient.
- Standard Sizes—3, 6.5, 11 watts.
- Leads Hot Tin Dipped.

Ovals

OVAL RESISTORS are for use where space saving is desired and where the use of the 'Heat Sink' function of the metal chassis, rack or panel may be employed. Resistance tolerance of ±5% is standard except on low resistance and multi-tapped units. COATINGS of vitreous enamel or silicone base are offered.

OVALS are available in regular or miniature sizes; an original development of MILWAUKEE Resistor.

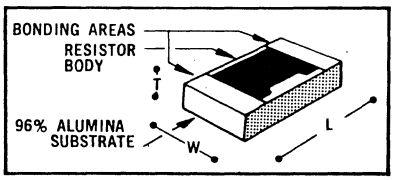
PRECISION THICK/THIN FILM CHIP RESISTORS

MINI-SYSTEMS, INC
20 David Road, P.O. Box 69, North Attleboro, MA 02761
TELEPHONE: (617) 695-0203 • TWX NO. 710-348-0564



MINI-SYSTEMS, INC., thick/thin film chip resistor components are ideally suited for the fabrication of microelectronic circuits where tight resistance tolerance, wide range of resistance values, or short production runs make the conventional screening and firing of thick/thin film resistance networks too costly. MINI-SYSTEMS, INC., chip resistors are made from a carefully engineered selection of materials. Geometries are mechanically precise and uniform. Careful testing and inspection result in the highest quality resistors.

STANDARD "MSR" SERIES

- Sizes Available: .035″ x .035″ up to .661″ x .494″.
- PDIS Rating (25°C free air): 35 mW to 12,000 mW.
- Resistors manufactured with palladium silver or platinum gold.
- Tolerances available: ±.25%, 1%, 2%, 5%, 10%, and 20% for most resistance values.
- All types available in untinned versions for conductive epoxy attachment.
- Hi-Rel screening available on all resistor types.
- Backside metalization available upon request.
- "Flip-Chip" resistors are solder tinned (SN-62).
- Wire bond resistors have gold metalization optimized for wire bonding.
- Sandwich metalization standard on all wrap-around resistors.

Wrap-Around Terminations

WA-	Size (L x W)	PDIS Rating 25°C Free Air (Milliwatts)	Ohmic Range
10	.040 x .037	35	1Ω to 75MΩ
4	.057 x .052	125	1Ω to 100MΩ
13	.083 x .052	200	1Ω to 100MΩ
9	.110 x .052	250	1Ω to 100MΩ
7	.110 x .102	500	1Ω to 100MΩ
24	.160 x .052	300	1Ω to 100MΩ

ESTABLISHED RELIABILITY QPL MIL-R-55342 CHIP RESISTORS FOR ALL CRITICAL APPLICATIONS

- Sizes 55342/1 through /6
- Terminations Available: S, R, W, T, U
- Tolerances Available: F, G, J, K
- Meet or exceed Characteristic M
- Delivery: Typically 4 to 6 weeks ARO

NEW LOW COST "JR" SERIES COMPUTER/INDUSTRIAL GRADE WRAP AROUND CHIP RESISTOR

TYPE #JR13 — .075(L) x .050(W) x .017(T)

- Resistance Range: 10Ω to 10MΩ to standard EIA/MIL/IEC resistance decade values.
- PDIS Rating (25°C free air): 200 milliwatts.
- Untinned for either epoxy or solder attachment.
- Immediate delivery from stock.

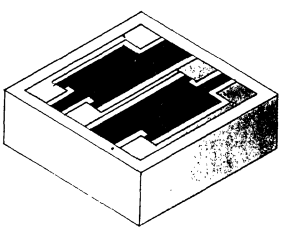
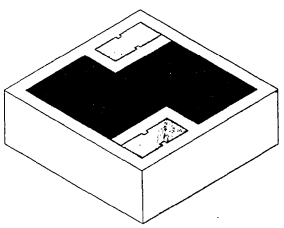
MSTF-2 SERIES (.020″ x .020″)

MSTF-3 SERIES (.030″ x .030″)

MSTF-4 SERIES (.040″ x .040″)

CUSTOM NETWORKS





MSTF-3 FORMAT A **MSTF-3 FORMAT B**

- Nichrome or Tantalum Nitride
- Choice of Substrates:
  a) Oxidized Silicon −.010″ ±.003″
  Oxide Thickness −12,000 Å ±2,000 Å
  b) Ceramic, 99.6% −.010″ ±.001″
- Values range through the RETMA Series from 1Ω up to 10 megohm, depending on chip size.
- Tolerances: ±20%, 10%, 5%, 2%, 1%, 0.5% and 0.1% for most values.
- Backside gold available (3,000 Å typ.) on request.
- MSTF-3 series includes standard center tap dual resistor pattern.
- Visual requirements designed to meet MIL-STD-883 Method 2010.6 with full lot traceability of material and processing.
- Bond pad size: .005″ x .005″ minimum. Bond pad conductor material: Gold (10,000 Å typ.) standard. Bondable with normal wire bonding methods, such as thermocompression, thermosonic, or ultrasonic.
- Nichrome resistors passivated with silicon dioxide (5,000 Å typ.) for moisture protection and reliability. TCR (absolute) can be provided from 0-25 ppm. Special TCR's available on request.
- Noise: −30 to −35 dB typical for most values.
- Stability: 0.05% max. 0.02% typical. ± .003% typical Ratio. (After 1000 hours @ + 125°C.)
- Trimmable: Designed for later active trimming with Xenon or YAG Laser.
- Chip or Packaged

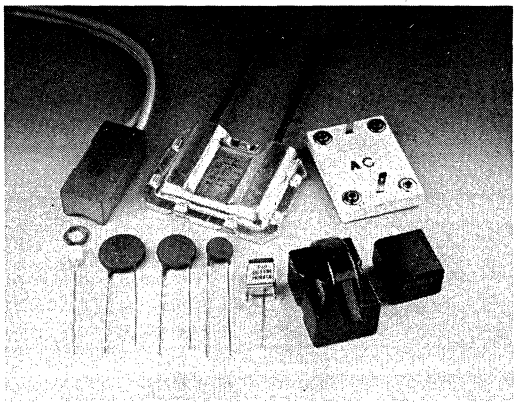
posistor® positive temperature coefficient resistors

MURATA ERIE NORTH AMERICA, INC.

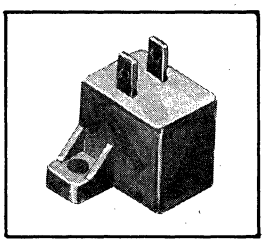


Murata Erie Posistors are basically positive temperature coefficient resistors with a very well defined resistance-temperature "knee" and the unique ability to "switch" relatively large amounts of power. They may also be used as self-regulating heating devices at useful power levels and as control devices for high power heaters. Applications include temperature sensing, over temperature and over current protection and motor starting to name a few.

Products utilizing Positors are extremely safe and reliable and offer all of the design, manufacturing, repair and sales advantages of solid state technology.

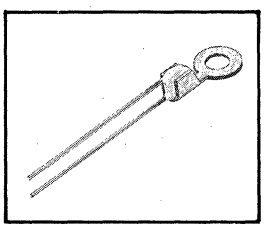
- Compact
- Reduced component count
- Extremely reliable
- "Stepless" temperature control
- Simple repair or replacement
- Long term reliability
- Shock and vibration immunity
- Nonflammable case and insulation available
- No electrical or acoustical noise
- No electrical contacts

FOR MOTOR STARTING



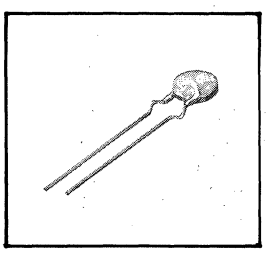
Provides a smooth, solid state electronic starting device for single phase motors utilizing a split-phase starting winding or for PSC motors as a direct replacement for starting capacitors and switches.

FOR SEMICONDUCTOR OVERLOAD PROTECTION



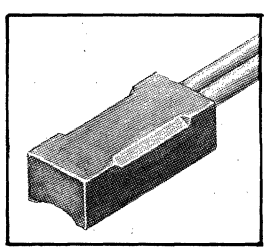
Senses the case temperature of high power semiconductors and appropriately reduces the power dissipation when dangerous power or current levels are reached by switching to a high resistance state and reducing base bias current.

FOR CIRCUIT PROTECTION



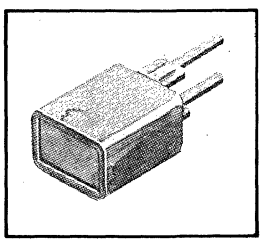
Provides overcurrent protection in a variety of applications. When connected in series with the protected device, Posistors limit the circuit current to a predetermined value — above that value they switch to a high resistance state and limit the current to a safe level.

FOR FREEZE PROTECTION



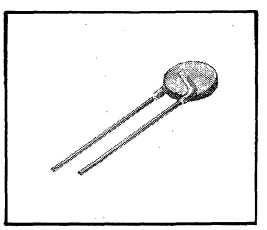
Designed for water filled pipe freeze-protection. Self-temperature regulating. As temperature decreases the Posistor power dissipation increases creating more heat that is conducted to the pipe (approximately 25 watts @ −20°C).

FOR DEGAUSING



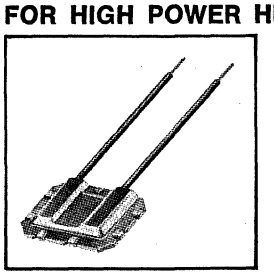
Used in series with CRT degausing coils, the Posistor functions as an automatic switch that goes to a high resistance state in a fixed time period after power is applied, effectively eliminating the current that flows through the degausing coil.

FOR TRANSFORMER PROTECTION



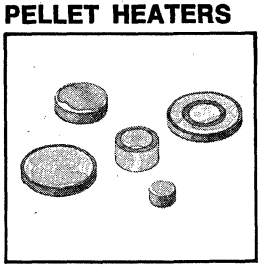
These devices are connected mechanically to the transformer core and electrically in series with the transformer primary. If core temperature exceeds temperature specs, the Posistor switches to a high resistance state and limits input current. It resets automatically when temperature returns to normal.

FOR HIGH POWER HEATING



Posistors for heating are self-temperature regulating with fast thermal response and power ratings to 170 watts.

PELLET HEATERS

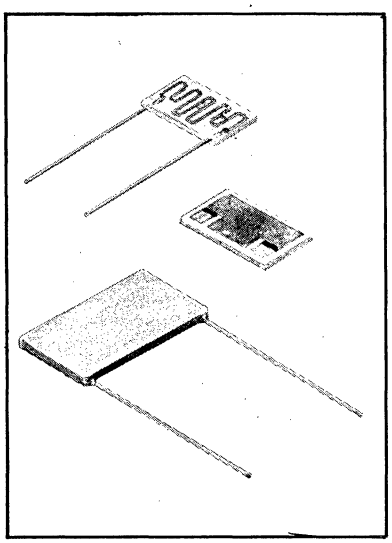


Basic Posistor elements are available in a variety of shapes and electrical characteristics to meet custom application requirements.

MURATA ERIE NORTH AMERICA, INC. 1148 Franklin Rd., S.E. Marietta, Georgia 30067 Tel: (404) 952-9777 Telex: 54-2329 TWX: 810-766-1531

high voltage resistors

MURATA ERIE NORTH AMERICA, INC.



HV resistors

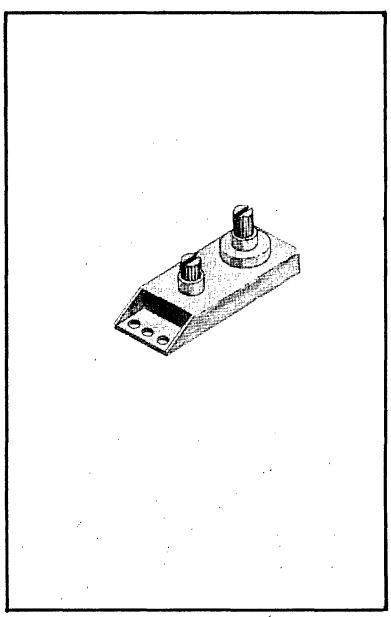
Murata Erie's line of high voltage resistors are designed to replace high voltage carbon film resistors and feature an extremely rigid alumina substrate with a deposited *thick film* resistance element for maximum electrical and mechanical stability.

Three models are offered — the *P Series* is for subassemblies that will be encapsulated in epoxy resin after assembly, the *D Series* which is supplied completely encapsulated and the *F Series* which is supplied encapsulated but without leads.

Murata Erie's application engineers are available to aid in the selection of exactly the right high voltage resistor to meet specific application requirements.

SPECIFICATIONS

Voltage Range	10 to 35 KV
Resistance Range	1 to 5000 Megohms
Power Rating	3 to 5 Watts at −70°C
Operating Temperature Range	−25°C to +130°C
Temperature Coefficient	±150 ppm/°C
Tolerance	±2% to ±20%



focus adjusting resistors

Murata Erie's focus adjusting resistors are designed to meet the stringent demands of high voltage CRT power supply applications. They are offered in a variety of configurations including those with integral capacitors and multiple taps such that most application requirements can be easily met.

TYPICAL CHARACTERISTICS

Item	Condition	Performance
Rated Power	Ambient Temperature: −20°C to +70°C	3W Max.
Temperature Coefficient	Ambient Temperature: −20°C to +120°C	±300 ppm/°C
Voltage Coefficient	Impressed Voltage: 1/10 Rated Voltage (to rated Voltage)	±3 ppm/Volt
Load Life	Ambient Temperature: 70°C; Impressed Voltage: Rated Voltage; Impressed Time: 1000 hours (90 minutes ON, 30 minutes OFF)	$\triangle R \leqq \pm 5\%$ $\triangle N \leqq \pm 3\%$
Humidity Characteristics	Ambient Temperature: 40°C; Relative Humidity: 95%; Shelf Time: 1000 hours	$\triangle R \leqq \pm 5\%$ $\triangle N \leqq \pm 3\%$
Thermal Shock Characteristics	1 cycle is −30°C (1 hour) to +130°C (1 hour) — Repeat 10 cycles	$\triangle R \leqq \pm 3\%$ $\triangle N \leqq \pm 2\%$
Withstanding Voltage	Impressed Voltage: 1½ Rated Voltage; Impressed Time: 1 minute	$\triangle R \leqq \pm 3\%$ No failure

△R denotes variation of resistance value. △N denotes variation of tapped resistance ratio.

RESISTORS

TYPE S RESISTOR ITEM DESCRIPTION

Sage Part Number identification consists of a combination of numerals and letters according to the following guide. This is the nomenclature ordinarily marked on resistors and it fully serves the purpose of purchased item description except for limited cases of special testing. Note that grouping of characters is not constant, but varies to fit descriptive need of a given part.

STYLE DESIGNATION

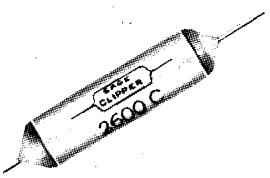
1500 — Body type, size, lead details per catalog chart

S / **NS** — **S** = single layer wound; **NS** = non-inductively wound

B — If applicable. Core Material and Process Classification:
Blank entry indicates regular steatite core, commercial processing
A = alumina core, commercial processing **P** = alumina core, High Rel processing
B = beryllia core, commercial processing **M** = beryllia core, High Rel processing

2740 — Nominal Value, Ohms (decimal symbol, as required, is used in both nominal value and tolerance)

1 — ±% tolerance



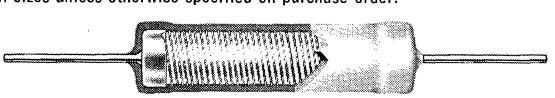
TYPE C

TYPE S

TYPE S CONSTRUCTION

Showing ceramic core, spaced single layer winding, welded to stainless steel cap, and multiple layer coating.

Copperweld leads 60/40 Hot Solder Dip. Lead Length 2" ±1/16* is supplied on all sizes unless otherwise specified on purchase order.



*Except 250S and 500S Styles, which are 1½" minimum.

TYPE C METAL SHEATHED RESISTORS

Similar in all respects to Type S, fully insulated plus addition of metal sleeve for heat sink mounting in spring clip holders.
Full heat sink rating.

STYLE	Rating Watts
	Full heat sink rating

SAGE SILICONE COATED fixed wire-wound units are not ordinary power resistors. They provide remarkable miniaturization vs. required wattage performance. Sage has pioneered the area of power handling capacity combined with precision and stability features ordinarily associated with Mil-R-93 resistors.

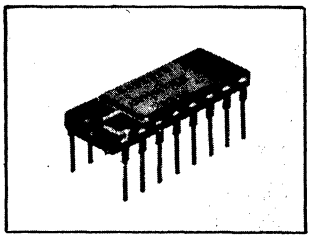
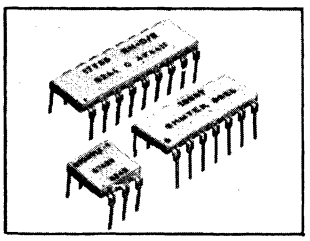
OHMTEK Precision Resistor Networks

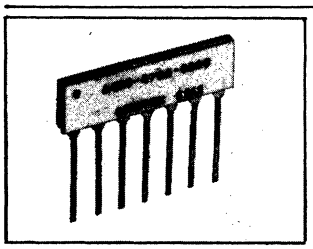
Wirewound Performance in Contemporary Packages



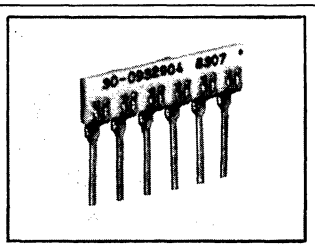
DUAL-IN-LINE HERMETIC
Meets Mil-R-83401 Characteristic "C" for military and other environmental extremes. Available 8, 14, 16 and 18 leads.



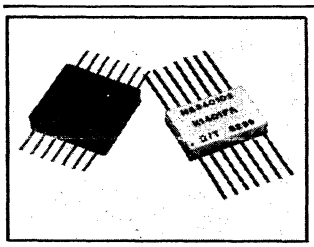
DUAL-IN-LINE CERAMIC SANDWICH
Meets Mil-R-83401 Characteristic "V". Packages of 4-22 leads in rugged monolithic inexpensive construction with highest precision in the industry.



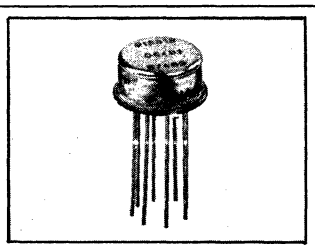
SINGLE-IN-LINE MIL-GRADE
Meets Mil-R-83401 Characteristic "V". 3-13 lead ceramic sandwich construction in high and low profile versions.



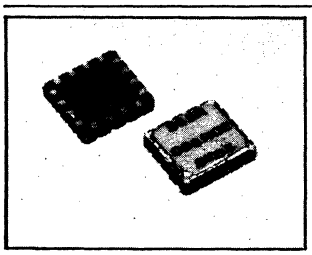
SINGLE-IN-LINE CONFORMAL
3-13 lead packages available. Designed for a wide range of tolerances and values at minimum cost.



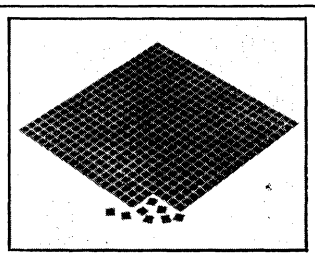
FLATPACKS
Hermetic or non-hermetic meet Mil-R-83401 Characteristic "C", "V" or "K". Available in 14 through 28 lead packages.



TO-STYLE HERMETIC
Available for custom precision applications requiring very low TCR and tight tracking.



LEADLESS CHIP CARRIERS
Hermetic or ceramic sandwich JEDEC packages. Standard and custom schematics available.



CHIP RESISTORS AND ARRAYS
Exceptional stability and reliability. Available in general purpose, 30-Mil square Mil-R-55342 characteristics and custom circuit arrays on ceramic or silicon.

Features:

- Standard circuits for military and commercial applications.
- Custom circuits as required for demanding applications.
- Nichrome or Tantalum based films optional.
- Wide packaging styles - standard hermetic or versatile custom pin counts with ceramic sandwich and conformal coated styles.
- Full Mil-spec screening available in-house.
- Rugged construction provides dependable performance at minimum cost.
- Network reliability greater than discrete resistor arrays.

Performance/Design Characteristics:

- Tolerances: .005% - 1%
- Resistance values: 10 ohms to 10 Megohm.
- Low TCR: 25 ppm/°C Std.
- Ultra low TCR: 10 and 5 ppm/°C available.
- Tracking less than 1 ppm.
- Operating temperature range: -55°C to +125°C
- Low noise: -35 db
- Stability: Δ R less than 200 ppm/70°C/ 10,000 hrs.

OHMITE® type 200 *brown devil*© fixed resistors

BROWN DEVIL® (Type 200) resistors, are vitreous enameled, wirewound units long famous for ruggedness and durability in small power resistors. With the emphasis towards miniaturization and the current industry trend towards higher operating temperatures, Ohmite has been able to increase the ratings on two Brown Devil sizes. The 5 watt size is now rated **8 watts** and the 10 watt size is now rated **12 watts**. The 20 watt unit retains the same rating. The higher ratings may be confidently applied to any 5 or 10 watt unit now in the possession of users or distributors.

Standard resistance tolerance is ±5% for values 1 ohm or higher; ±10% for values below 1 ohm. Tinned leads 1½" long: 3 and 5¼ watt, 20 AWG; 8, 12 and 20 watt, 18 AWG.
